CIS-Net AVI User Manual

Author(s)	HOOPER Janise; CARMICHAEL Tim} {(BMI, PRS for Music)}
Version	{08.00}
Date of the current version	{2015-05-19}
Category of Document	{User Manual}
Status of the Document	{Deliverable}
Distribution List	{CIS-Net Business Liaisons; CIS-Net Technical Liaisons}
Keywords	{}

Summary

This user guide related to version 4.7.1 of the application enables the user to use the CIS-Net Audio Visual Index application (AVI) to make and track their request and/or receipt of Audio Visual Cue Sheets.

History of revisions

Date of revision	N° of version	Description	Authors(s)
2008-06-16	00.00	Creation	Janise HOOPER
2008-06-20	01.00	Deliverable	
2011-03-22	02.00	Deliverable including updates and enhancements related to CIS-Net version 4.2 (see related Business Release Notes for details)	Tim CARMICHAEL
2011-06-30	03.00	Deliverable including updates and enhancements related to CIS-Net version 4.3 (see related Business Release Notes for details)	Sylvain Masson; Tim Carmichael

1 Getting started

CIS-Net AVI online search engine version 4.7.0 is compatible with the following Web Browsers:

- Safari
- Internet Explorer 8 onwards
- Firefox
- Google Chrome

The Login Page will validate and allow you, as an authorized user of the system, to access the CIS-Net Application and Search Engine.

Figure 1: Login Page

Follow the instructions below to login and access the CIS-Net search engine:

- Enter your email address in the ‘E-mail’ field (case sensitive).
- Enter your password in the ‘Password’ field (case sensitive).
 - Click ‘Forgot Password?’ if you need a new password. The new password will be sent to your email address.
- Click on the ‘OK’ button to enter the CIS-Net application.

As a result of this action the Home Page will be displayed. The uppermost level a system selection line provides is:

- Home Page (currently displayed as default setting)
- MWI (Musical Works Information)
- IPI (Interested Party Information)
- CSI (Common Search Index)

- AVI (Audio Visual Index)
- AGM (Agreements)
- NLP (Notification of Live Performances)
- FastTrack Security System Administration (FSSA) (for your personal maintenance of your user profile, e.g. password, default language etc.)
- **X** (at the end of the line for Logout)

The number of Application Tabs available (e.g. AVI) will depend on your User setup which will be managed by your CIS-Net Administrator.

The Home Page contains a Welcome frame with latest news for the user, e.g. currently unavailable nodes or scheduled maintenance periods. (For an example see screen shot, Figure 2)

2 Accessing the CIS-Net Audio Visual Index Application

The CIS-Net Audio Visual Index Application is accessed by clicking on the AVI button located on the System Selection frame (see marked item on the following screenshot).

Figure 2: System Selection Frame

Network Status

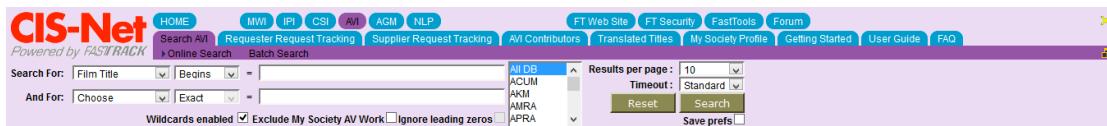

- Databases currently in Maintenance
None
- Planned Maintenance Downtimes
None

Once you are in the AVI application, the Search for AVI's page will change to only include the set of search tools and options needed to initiate the search in the AVI database.

2.1 Search for AVI's Page

The Search for AVI's page will provide you with a set of search tools and options to initiate searches against the various AVI Contributing Societies as well as view a list of all candidate AV works returned by the search. The Search for AVI's page is divided into several frames, each of which will be described in the sections below.

Figure 3: Search for AVI's Page

2.1.1 Menu Frame

From the Search for AVI's page, further Menu options are as follows:

- **Requester Request Tracking:** provides access to the CIS-Net AV Requester's Request Tracking Facility.
- **Supplier Request Tracking:** provides access to the CIS-Net AV Suppliers' Request Tracking Facility.
- **Translated Titles:** provides access to publisher and third party details of translated, local & alternate titles; interested party information (actors, directors, etc.); identification numbers such as the ISAN that have been matched with productions in the CIS-Net AVI.
- **Getting Started:** a brief description about the CIS-Net AVI for Requesting & Supplying Societies, Publishers using Pubnet and links to related documentation.
- **User Guide:** this menu option provides the user with the ability to download a copy of this user manual.
- **FAQ:** provides FAQ information, when available, on the AVI domain.

The following Menu options are restricted to those societies who contribute productions to the CIS-Net AVI:

- **AVI Contributors:** provides details of AVI contribution tracking for the societies that contribute productions to the CIS-Net AVI. This tab will be visible to the administrator for each contributing society.

- **My Society Profile:** provides access to the societies' administrators to provide details of the society's preference with respect to cue sheet requests, cue sheet response, etc.

A separate manual has been created in relation to the above two menu options: CIS-Net_CIS-AVINDEX-01AVIndexIntegrationContributorManual_01_00_en.doc (CISAC Reference: CISNET12-0727)

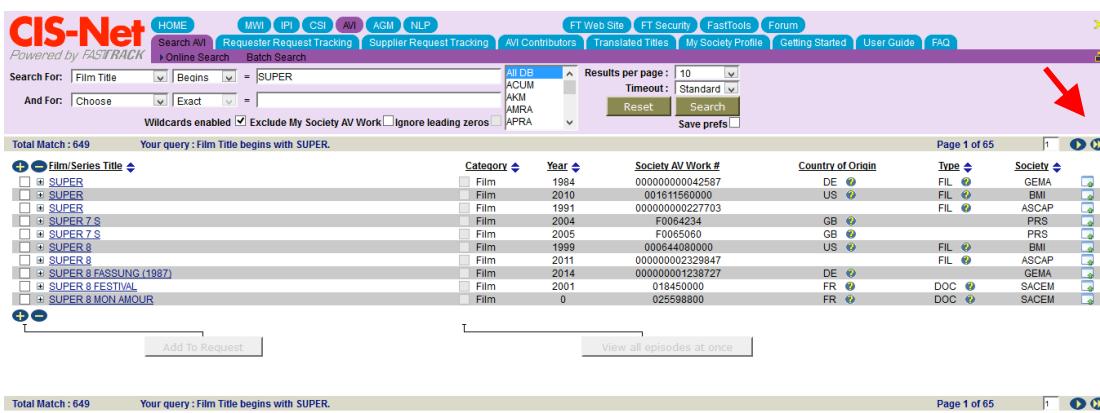

In addition to the Menu options, the Menu Frame provides the following function:

- **Full Screen:** the graphic double-window symbol allows for hiding and un-hiding the Search Criteria frame to allow for more displayable area on the page.

2.1.2 Navigation Frame

The Navigation Frame provides you with the mechanism for navigating the pages available in the AV Selection frame. The navigation options available in this frame are as follows (see following screenshot):

Figure 4: Navigation Elements

Category	Year	Society AV Work #	Country of Origin	Type	Society
Film	1994	00000000042507	DE	FIL	GEMA
Film	2010	001611560000	US	FIL	BMI
Film	1991	000000000227703		FIL	ASCAP
Film	2004	F0064234	GB	FIL	PRS
Film	2005	F0065060	GB	FIL	PRS
Film	1999	000644080000	US	FIL	BMI
Film	2011	000000002329847		FIL	ASCAP
Film	2014	000000001238727	DE	FIL	GEMA
Film	2001	018450000	FR	DOC	SACEM
	0	025598800	FR	DOC	SACEM

- **First Page:** clicking the left-directional double-arrow graphic symbol will take you to the first available page in the AV Selection frame.
- **Last Page:** clicking the right-directional double-arrow graphic symbol will take you to the last available page in the AV Selection frame.
- **Next Page:** clicking the right-directional single-arrow graphic symbol will take you to the next available page in the AV Selection frame.
- **Previous Page:** clicking the left-directional single-arrow graphic symbol will take you to the previous page in the AV Selection frame.
- **Skip Pages:** by entering a numeric value in the Skip Pages field, in conjunction with the Next Page or Previous Page buttons, you can skip specific number of pages from the current page you are on. For example, if you are on page 1 and

would like to jump to page 11, you would enter 10 in the Skip Pages field and click on the Next Page button.

- **'Back' Button:** The 'back' button is required when navigating within the application.

Note: Even if the functionality is quite the same do not use the **back** button of the browser. This usage can derange the application.

2.1.3 Search Criteria Frame (Online Search)

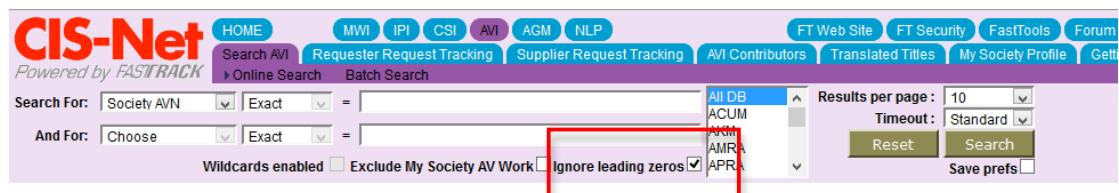

The Search Criteria frame provides you with the available criteria and options to search and retrieve AV information from the AVI database.

2.1.3.1 ‘Search For’ option¹

The ‘Search For’ option provides a drop-down list specifying the types of fields (search arguments) that can be used to search for specific AV information. The options provided in the ‘Search For’ drop down field are as follows:

- **Film Title:** Searches the selected databases for all AV film titles that match the entered search criteria. Select ‘Begin’, ‘Exact’ or ‘Contains’ from the drop-down list.
- **Series Title:** Searches the selected databases for all AV series titles that match the entered search criteria. Select ‘Begin’, ‘Exact’ or ‘Contains’ from the drop-down list.
- **Episode Title:** Searches the selected databases for all AV episode titles that match the entered search criteria. Select ‘Begin’, ‘Exact’ or ‘Contains’ from the drop-down list.
- **Film/Series Title:** Searches the selected databases for all AV film and series titles that match the entered search criteria. Select ‘Begin’, ‘Exact’ or ‘Contains’ from the drop-down list.

Society AVN (Audio Visual Number): Searches the selected databases for AV works by their proprietary and society specific AV numbers. The AVI search for society AVN also allows searching without leading zeros attached to each number. To do so you need to tick the ‘Ignore leading zeros’ case in the search menu options:

The screenshot shows the CIS-Net Online Search interface. At the top, there's a navigation bar with links like HOME, MWI, IPI, CSI, AVI, AGM, NLP, FT Web Site, FT Security, FastTools, Forum, and others. Below the navigation bar is a search form. The 'Search For:' dropdown is set to 'Society AVN' and 'Exact'. The 'And For:' dropdown is set to 'Choose' and 'Exact'. There are checkboxes for 'Wildcards enabled' and 'Exclude My Society AV Work'. A red box highlights the 'Ignore leading zeros' checkbox, which is checked. To the right of the search form, there are dropdowns for 'All DB' and 'Results per page: 10', and a dropdown for 'Timeout: Standard'. At the bottom right are 'Reset', 'Search', and 'Save prefs' buttons.

¹ See also Tips & Tricks # 20

Please note that the above screenshot has been taken from the test environment and may include more menu options that are visible to the general user.

- **Production Number:** Searches the selected databases by the production company's identifying AV production number.
- **V-ISAN (International Standard Audio Visual Number):** Searches the selected databases by the entered ISAN number and retrieves all AV works associated with that ISAN number. Since the ISAN numbers are stored in the databases without their formatting characters, the search engine will automatically strip any formatting characters from the entered ISAN number prior to initiating the search.
- **EIDR (Entertainment Identifier Registry):** Searches the selected databases by the entered EIDR number and retrieves all AV works associated with that EIDR number. Since the EIDR numbers are stored in the databases without their formatting characters, the search engine will automatically strip any formatting characters from the entered EIDR number prior to initiating the search.
- **Episode Sanitized Title:** a sanitized title search on the Episode Titles that contain non-alphabetical and non-numeric characters (called 'incorrect' characters) such as double blank spaces, apostrophes, hash, quotation marks, ampersand etc. This option has the same characteristics as the 'Sanitized Title' option in MWI.
- **Film/Series Sanitized Title:** a sanitized title search on the Film/Series Titles that contain non-alphabetical and non-numeric characters (called 'incorrect' characters) such as double blank spaces, apostrophes, hash, quotation marks, ampersand etc. This option has the same characteristics as the 'Sanitized Title' option in MWI.

2.1.3.2 Exact/Begins/Contains Drop-Down List²

When Series, Film, Episode or Series/Film Title is the search criteria selected, 'Exact', 'Begins' or 'Contains' can be selected from the drop-down list.

- **Exact:** Searches the selected databases for the AV Title(s) that *exactly* matches the entered search criteria.
- **Begins:** Default setting. Searches the selected databases for the AV Title(s), which match the order of the words in the entered search criteria. The 'Begins' search is based on a full word search and does not perform partial word searches.
- **Contains:** Searches the selected databases for the AV Title(s) that include the words in the entered search criteria in any order.

² See also Tips & Tricks # 20

2.1.3.3 ‘And For’ Option

The ‘And For’ provides supplemental search criteria options. When used in combination with the ‘Search For’ criteria options; the ‘And For’ search criteria provide a more focused and specific search. Availability and use of the ‘And For’ criteria options are dependent on the specific ‘Search For’ criteria option selected. The following table illustrates the valid ‘Search For’ and ‘And For’ combinations that are currently available. The top row of the table specifies the ‘Search For’ options and the left column of the table specifies the ‘And For’ options.

Figure 5: Valid ‘Search For’ & ‘And For’ Combinations

	Film Title	Series Title	Episode Title	Film/Series Title	Episode Sanitized Title	Film/Series Sanitized Title
Episode Title	No	Yes	No	Yes	No	No
Production Number	Yes	Yes	No	Yes	No	No
Year of Production	Yes	Yes	Yes	Yes	Yes	Yes
Country of Origin	Yes	Yes	Yes	Yes	No	No
Type	Yes	Yes	No	Yes	No	No
Actor	Yes	Yes	Yes	Yes	Yes	Yes
Director	Yes	Yes	Yes	Yes	Yes	Yes
Production Company	Yes	Yes	Yes	Yes	No	No
Episode Number	No	Yes	Yes	Yes	Yes	Yes
Series Identifier	No	Yes	No	No	No	No
Episode Year of Production	No	Yes	No	Yes	No	No
Episode Sanitized Title	No	No	No	No	No	Yes

The following Search Criteria can only be searched on their own and not in combination with other criteria:

- Society AVN
- Production Number
- V-ISAN
- EIDR

The ‘Type’ options available for searching in the ‘And For’ criteria are listed below:

ANI	Animated
COM	Commercial
DOC	Documentary

FIL	Film
INF	Infomercial
MIN	Mini Series
MUL	Multimedia
NEW	News
SER	Series
SOP	Soap Opera
SPE	Sports
TRL	Trailer

2.1.3.4 Search Values

2.1.3.4.1 General

The following general information applies to the Search Criteria input values:

- There is no distinction between lowercase and uppercase characters. If you enter the values in lowercase characters they will internally be transformed to uppercase characters. This transformation is a prerequisite for the retrieval as the databases only contain uppercase characters.
- The input field always allows 60 characters even if they are not needed, e.g. for agreement codes. If the input is larger than the corresponding database field the input will be truncated without any notice.
- The input fields will be checked for formal correctness, e.g. an ISAN Number must be a 12-digit root segment followed by a 4-digit segment for the identification of episodes or parts when applicable, only consist of digits. You must not enter diacritic characters for titles and names but you have to replace them by the corresponding Latin characters. A violation of these requirements will result in an error message.

In order to avoid confusions and homogenize the ISAN and V-ISAN representation, the ISAN International Agency decided together with the TC46/SC9/WG1 to stop issuing 16 digits ISAN and only allocate 24 digits ISAN with a version segment of 0. The ISAN System remains compatible with the 16 digit ISAN issued in the past, therefore all ISAN queries on the ISAN central repository are automatically treated as 24 digits numbers, the version segment of 0 being automatically added when missing.

2.1.3.4.2 Chinese Character Set

The application is able to handle non-Latin character sets. There are no restrictions either for searching or by displaying non-Latin characters. For Chinese characters some special rules apply which will be explained in this section.

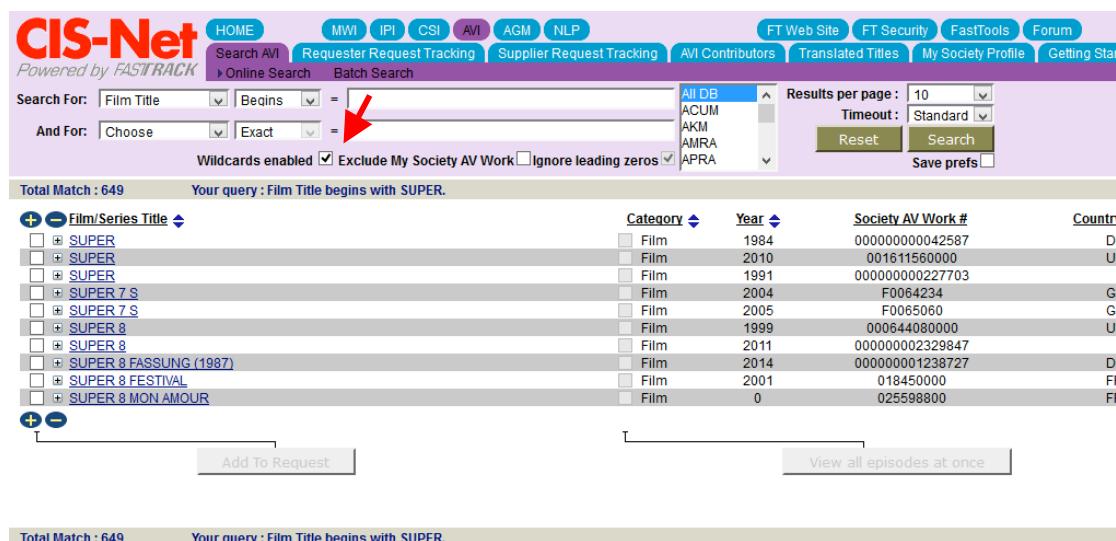

- You can search for “Film, Series, and Episode title(s) begins with” or “Film, Series, and Episode title(s) exact” with any combination of Latin and Chinese characters.

- You can also search for “Film, Series, and Episode title(s) contains” with any combination of Latin and Chinese characters but you must take into consideration that every Chinese character is to be handled as a word, i.e. you have to separate each Chinese character by a blank from any other Chinese character and any word of Latin characters.

2.1.3.4.3 Wildcards for Title Search

The feature for searching by partially known Film, Series, and Episode title(s) can be increased by the use of wildcard characters. For this reason you have to enable the wildcard checkbox (see figure 6)

Figure 6: Enable Wildcard checkbox

The screenshot shows the CIS-Net search interface. At the top, there are several tabs: HOME, MWI, IPI, CSI, AVI, AGM, NLP, FT Web Site, FT Security, FastTools, Forum, and Getting Started. Below the tabs, there are search fields for 'Search For:' and 'And For:', both set to 'Film Title'. Under 'Search For:', the dropdown is set to 'Begins' and the value is 'SUPER'. Under 'And For:', the dropdown is set to 'Exact' and the value is 'SUPER'. A red arrow points to the 'Wildcards enabled' checkbox, which is checked. Other visible checkboxes include 'Exclude My Society AV Work' (unchecked), 'Ignore leading zeros' (unchecked), and 'APRA' (checked). To the right of the search fields are buttons for 'Reset', 'Search', and 'Save prefs'. Below the search bar, it says 'Total Match : 649' and 'Your query : Film Title begins with SUPER.' On the left, there is a sidebar with a tree view under 'Film/Series Title' showing nodes like 'SUPER', 'SUPER 7 S', etc. On the right, there is a table listing results with columns: Category, Year, Society AV Work #, and Country. The table includes rows for various films from 1984 to 2014, each with a unique Society AV Work number and country code (DI, U, GI, FF).

In a second step you enter your search criterion with one of the following wildcard characters:

- ? The question mark stands for exactly one arbitrary character
- * The asterisk stands for none, one or several arbitrary characters

Note:

- The wildcard checkbox cannot be enabled for an EXACT search.
- If the wildcard checkbox is enabled the question mark and the asterisk are considered as wildcard characters rather than as a search value. There is no way to combine these features.

- Searches with wildcard characters cause a heavy workload on the servers which results in longer response times to the user. For this reason the use of wildcard characters will only be accepted from the fourth position of the search criterion onwards. This rule limits the overhead of the wildcard search. A violation of this rule will cause an error message “First Criteria Input is invalid”.
- Several wildcard characters can be used in one search value.

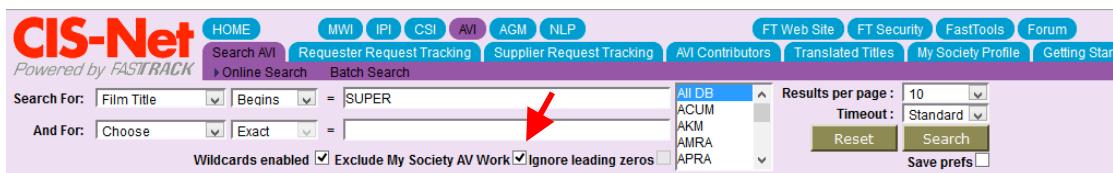

Examples with wildcards:

Search Mode	Search Value	Some Search Results	Remarks
BEGINS	DEMO*	DEMOLITION DEMON DEMONSTRATION	This search is equivalent to the search by “Film, Series or Episode title begins with” DEMO, i.e. the wildcard character is needless
CONTAINS	KNOCKIN? HEAVEN*S DOOR	KNOCKIN’ ON HEAVEN’S DOOR KNOCKING ON HEAVENS DOOR	Several wildcard characters
BEGINS	DON?T	DON’T DON T	
BEGINS	DON*T	DON’T DON T DONT	Third result differs to the previous example
BEGINS	L?AMOUR		Error message as the wildcard character is located at the second position.
BEGINS	TOI L?AMOUR	TOI L AMOUR TOI L AMOUR ET MOI TOI L’AMOUR	

2.1.3.5 ‘Exclude My Society AV Work’

The Exclude My Society AV Work feature allows the user to exclude AV works posted by his/her society from the search results. To enable this feature, you must use the checkbox feature (see figure 6)

Figure 7: ‘Exclude My Society AV Work’

2.1.3.6 ‘Database’ List Box

The Database List Box provides a list of all databases that can be selected for searching. A default value of ‘ALL DB’ will provide for automatically selecting all the databases for searching. The following are additional methods for selecting one or more specific databases for searching:

- **Selecting a Single Database:** To select a single database for searching, simply left-click on that database.
- **Selecting Multiple Databases in a Range:** To select multiple databases that are listed sequentially in a range, left-click on first database in the range, hold down the Shift key and left-click on the last database in the range.
You can also select a range by clicking the left mouse button and dragging the mouse point over the desired range.
- **Selecting Multiple Databases not in a Range:** To select multiple databases that are not listed sequentially in a range, left-click on the first database, holding down the Ctrl key select additional database by left clicking on them.

2.1.3.7 ‘Results Per Page’ Option

The Results per Page option allows you to select the number of AV works that should be displayed per page in the AV Work Selection frame. The AV Works per Page options are available in various increments from 5 to 100 works per page.

2.1.3.8 ‘Time Out (Sec.)’ Option

The Time Out option specifies the amount of time, in terms of seconds, that the search engine should wait to receive responses from the selected database specified in a search. Certain factors such as the complexity of a desired search or occasional communication problems may delay response from certain databases on the network. The Time Out option, therefore, provides you with the flexibility to adjust (decrease or increase) the time out duration according to the specific conditions that

may arise. The Time Out options are available in increments of 5 seconds, from 5 to 60 seconds.

The latest version of the CIS-Net AVI (4.7) includes the Time Out options of: Quick, Standard and Extensive. These are similar to the previous values of 5 seconds to 60 seconds.

2.1.3.9 ‘Reset’ Button

The Reset button returns the content or value of all fields and options within the AV Search Criteria Frame to their original default values as set by the search engine.

2.1.3.10 ‘Search’ Button

The Search Button initiates a search by communicating the specific search criteria provided by you to the various databases selected for searching.

2.1.3.11 Save Preferences

After login to the application the parameters are set to their default values, i.e.

- Search For: ‘Film Title’
- ‘Begins’
- And For: ‘Choose’
- Wildcard enabled: yes
- ‘All DB’
- Works/page: ‘5’
- Timeout (sec.): ‘15’
- Save prefs: no

If you modify these values in the course of your activities, activate the checkbox ‘Save prefs’ and terminate the application, the last settings will be saved and upon the next login the application will use these settings as initial values. Thus you can continue your activities with the same settings of the previous termination.

Note: Clicking on the reset button will reset all values to their default values.

2.1.4 Work Selection Frame

The Work Selection frame will provide you with a list of all candidate AV works from each selected database that matched the search criteria.

<input type="checkbox"/> + SUPER 8	Film	2011	000000002329847	
<input type="checkbox"/> + SUPER 8 FASSUNG (1987)	Film	2014	000000001238727	DI
<input type="checkbox"/> + SUPER 8 FESTIVAL	Film	2001	018450000	FF
<input type="checkbox"/> + SUPER 8 MON AMOUR	Film	0	025598800	FF

Total Match : 649 Your query : Film Title begins with SUPER.

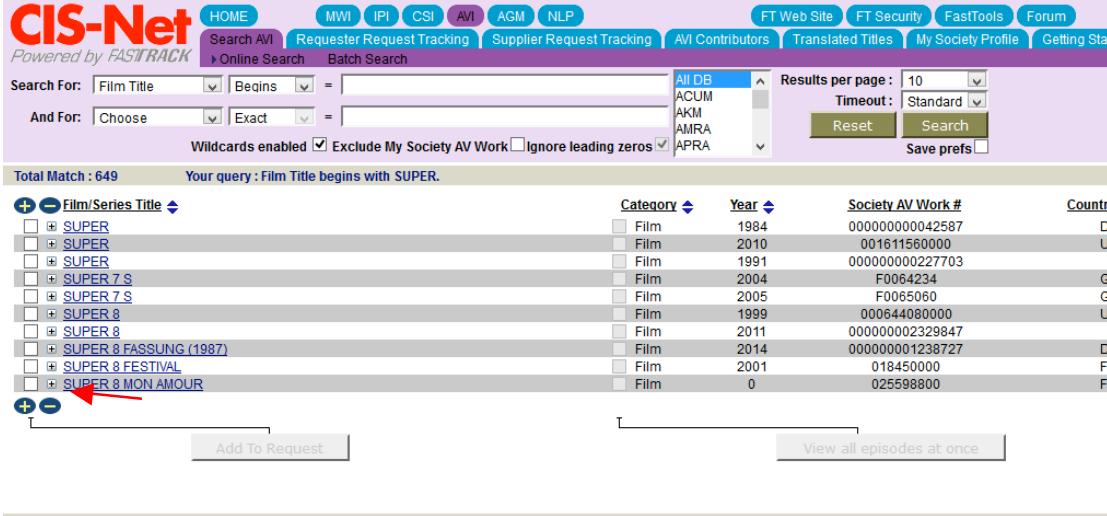

Note: with the introduction of CIS-Net AVI version 4.3 and beyond, the following enhancements were added to the original layout:

Each listed line on the screen is made visually distinct as shown in the above screenshot. The same enhancement were included on the PDF Cue Sheet Printout as well (Please refer to paragraph “4.2.3 Cue Sheet PDF Sample” for illustration).

2.1.4.1 AV Work Title Line

Each AV work title line will contain an icon (a plus sign symbol).

Figure 9: AV Work Title Line

The screenshot shows the CIS-Net AVI search interface. The search query is "Film Title begins with SUPER.". The results table has columns for Category (with a dropdown arrow), Year, Society AV Work #, and Country. The first result is "SUPER". Below the table, there are two buttons: "Add To Request" and "View all episodes at once". At the bottom, it says "Total Match : 649" and "Your query : Film Title begins with SUPER.".

Category	Year	Society AV Work #	Country
Film	1984	00000000042587	DI
Film	2010	001611560000	U
Film	1991	00000000227703	
Film	2004	F0064234	GI
Film	2005	F0065060	GI
Film	1999	00644080000	U
Film	2011	000000002329847	
Film	2014	000000001238727	DI
Film	2001	018450000	FF
Film	0	025598800	FF

Clicking the plus sign icon will un-collapse to display the following additional information in a box under the selected title:

Audio Visual Work Information: Society AV Work Number, Country of Origin, Production Number, ISAN Number, Percentage of Interest and Other Information.

Other AV Title(s): Each alternate or translated Film/Series Title available for the AV work is listed. For each title, the title type and submitting society name is listed as well. For a description of the different Title types see Appendix A.

Note: The submitting society name could be different by listed title due to the merging process performed in the CIS AVI. For example when a duplicate AV work is identified from different contributors the AV work is merged but all titles are retained.

Participant(s) Line: One line for each AV participant available for the AV work (Actors, Directors and Production Companies).

Clicking the minus sign will re collapse the additional information.

The number of works displayed per page will be controlled by the Results per Page setting even when the titles are collapsed.

2.1.4.2 Film, Series or Film/Series Title Search

When ‘Film Title’ is selected, the AV Work Selection Frame includes the following information for each AV work: Film/Series Title, Category, Year (of production), Society AV work Number, Country of Origin, Type and Society (source of the AV work).

The AV Work Selection frame provides the following functionality when ‘Film’, ‘Series’ or ‘Film/Series Title’ is the selected search criteria:

- **Film/Series Title Hyperlink:** When the selected AV work is a film, clicking on the Film/Series Title Hyperlink displays the AV Work Details Page. If the selected title is actually a Series, then clicking the hyperlink will refresh the current screen and display the Episode Listing Page with all the corresponding episode titles and or episode numbers for the selected series.
- **‘Add to Request’ Button:** This button will appear next to each Film/Series Title line displayed on the AV Work Selection page and allows the user to add the AV work title to the ‘Request’ for further request processing. This button will be visible only for Film or Episode titles and or Episode numbers.

The user can queue as many AV works as needed, without opening another screen to open or add to the package.

Once the queuing and selection process is complete, the user will go to the **Requester Request Tracking** menu option to package and submit the request to the Supplier societies.

- **Sorting Icon by Columns Header:** The user will be able to sort the results by any of the following column headers: Film/Series Title, Category, Year, Type and Society. An icon showing two triangles facing opposite directions next to each column header label will be used to perform this sort as illustrated in the following screen mock-ups. For example, when clicking on the icon corresponding to the column header Type, all displayed information will be sorted by Type.

The AV Search results page will provide supplemental information:

A status line is displayed on the top and bottom of the page of the AV Search Result page with the following information:

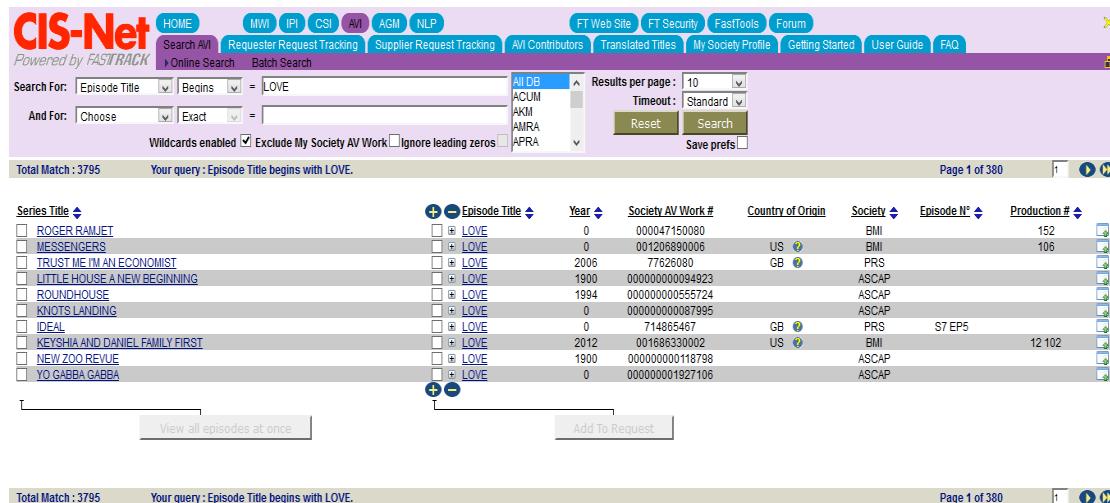

- **Total Match:** This numeric value will indicate how many matches were found in the CIS-Net AVI database based on the submitted search criteria.
- **You searched for:** This value will indicate which search criteria was performed. It is useful for example when the search criteria frame is hidden.
- **Page x of y:** This numeric value will indicate the current page number and the total number of pages to scroll through...

2.1.4.3 Episode Listing Page Layout

The AV Work information presented for an Episode will differ from the Film/Series Title Search since a Series is comprised of several episodes.

When a title corresponds to a series or episode title, the Episode Listing Page will display the following information: Series Title, Episode Title, Year (of Production), Society AV Work Number, Country of Origin, Society (source of the AV work), Episode N°, and Production Number.

Figure 10: Episode Listing Page

The screenshot shows the CIS-Net Episode Listing Page. At the top, there's a search bar with 'Search For: Episode Title' and 'Begins' dropdown set to '= LOVE'. Below it, 'And For:' dropdowns show 'Choose' and 'Exact' set to '='. The search results table has columns: Series Title, Episode Title, Year, Society AV Work #, Country of Origin, Society, Episode N°, and Production #. The results listed are:

Series Title	Episode Title	Year	Society AV Work #	Country of Origin	Society	Episode N°	Production #
ROGER RAMJET	LOVE	0	000047150080		BMI		152
MESSENGERS	LOVE	0	001206890006	US	BMI		106
TRUST ME I'M AN ECONOMIST	LOVE	2006	77626080	GB	PRS		
LITTLE HOUSE: A NEW BEGINNING	LOVE	1900	00000000004923		ASCAP		
ROUNDHOUSE	LOVE	1994	00000000055724		ASCAP		
KNOTS LANDING	LOVE	0	00000000087995		ASCAP		
IDEAL	LOVE	0	714865467	GB	PRS	S7 EP5	
KEYSHIA AND DANIEL FAMILY FIRST	LOVE	2012	001686330002	US	BMI		12 102
NEW ZOO REVUE	LOVE	1900	000000000118798		ASCAP		
YO GABBA GABBA	LOVE	0	000000001927106		ASCAP		

At the bottom left, there's a button 'View all episodes at once' and a 'Add To Request' button. The page footer says 'Total Match : 3795' and 'Your query : Episode Title begins with LOVE.' with 'Page 1 of 380'.

The Episode Listing Page provides the following functionality:

- **Series Title Hyperlink:** Clicking the hyperlink will refresh the current screen and display the Episode Listing Page with all the corresponding episode titles and or episode numbers for the selected series.
- **Episode Title Hypertext:** Clicking the hyperlink on the selected Episode title will display the AV work Details Page.

The user can queue as many AV works as needed, without opening another screen to open or add to the package.

Once the queuing and selection process is complete, the user will go to the **Requester Request Tracking** menu option to package and submit the request to the Supplier societies.

- **'View all episodes at once' Button:** This button allows the user to see all the episodes of the selected series. If the user wants to select multiple episodes at once it is recommended to preset the number of results per page to 100. In such a case the user will see displayed 100 episodes on one page and use the +/- feature to select or unselect all the episodes displayed on the page.

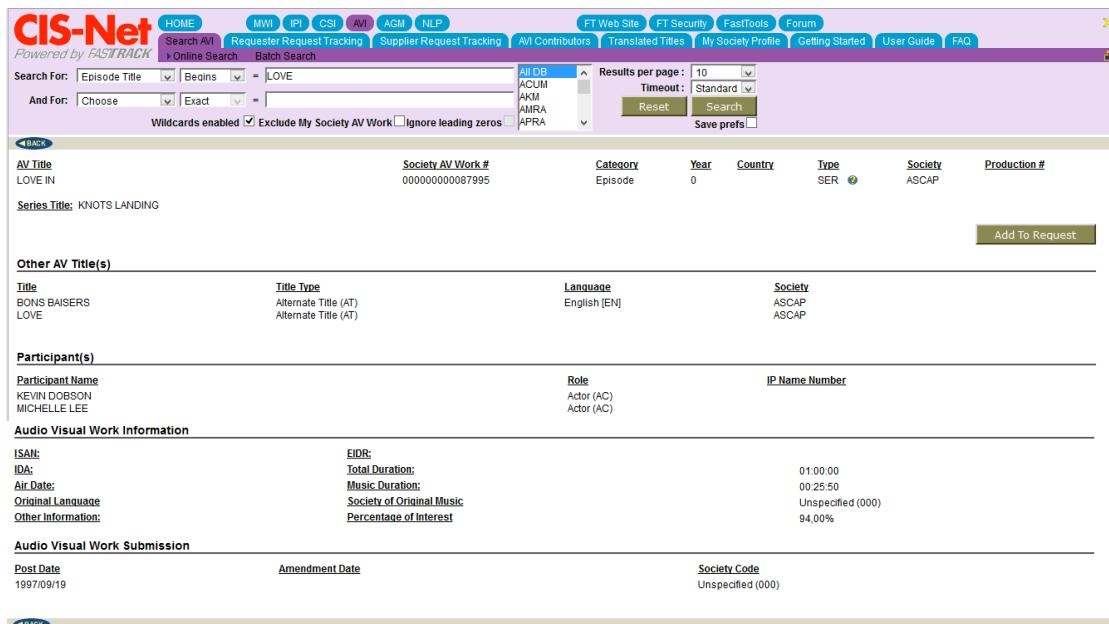

- **'Add to Request' Button:** This button will appear next to each Episode Title line displayed on the AV Work Selection page and allows the user to add the AV title to the 'Request' for further request processing.
- **Sorting Icon by Columns Header:** The user will be able to sort the results by any of the following column headers: Series Title, Episode Title, Year (of Production), Society AV Work Number, Country of Origin, Society, Episode Number and Production Number. An icon showing two triangles facing opposite directions next to each column header label will be used to perform this sort as illustrated in the following screen mock-ups. For example, when clicking on the icon corresponding to the column header Society, all displayed information will be sorted by Society.

Note: Clicking the + sign will select all the AV titles listed on the page and the – sign will unselect all previously selected AV titles.

2.2 AV Work Detail Page

The AV Work Detail page will provide you with a complete set of information available for the selected AV work.

Figure 11: AV Work Detail page

The screenshot shows the CIS-Net AV Work Detail page. At the top, there is a search bar with the query "LOVE IN". Below the search bar, the results table displays one row for "LOVE IN". The columns in the table are: AV Title, Society AV Work #, Category, Year, Country, Type, Society, and Production #. The data for "LOVE IN" is: LOVE IN, 00000000087995, Episode, 0, United States, SER, ASCAP. Below the table, there is a section titled "Other AV Title(s)" which lists "BONS BAISERS" and "LOVE" as alternate titles. There is also a "Participant(s)" section listing KEVIN DOBSON and MICHELLE LEE. The "Audio Visual Work Information" section includes fields for ISAN, IDA, Air Date, Original Language, and Other Information. The "Audio Visual Work Submission" section includes Post Date (1997/09/19) and Amendment Date. A "Save prefs" button is located at the bottom right of the search area.

The AV Work Detail Page provides the following functionality:

- **AV Title Line:** including the AV Title, Society AV Work Number, Category, Year (of Production), Country, Type, Society (source of the AV work), Production Number, and 'Add to Request' button.
- **Other AV Title(s) Line:** including one line for each Alternate Film Title or Translated Title available for the AV work.
- **Participant(s) Line:** includes Participant Name, Role and IP Name Number for each participant associated with the AV work.
- **Audio Visual Work Information Line:** including general AV work information such as ISAN (International Standard Audiovisual Number), IDA (International Documentation Audiovisual works), EIDR (Entertainment Identifier Registry), Air Date, Other Information, Total Duration, Music Duration, Society of Original Music, Percentage of Interest, and Original Language.
- **Audio Visual Work Submission Line:** including the Post Date, Amendment Date and Society of Submission associated with the selected AV work.

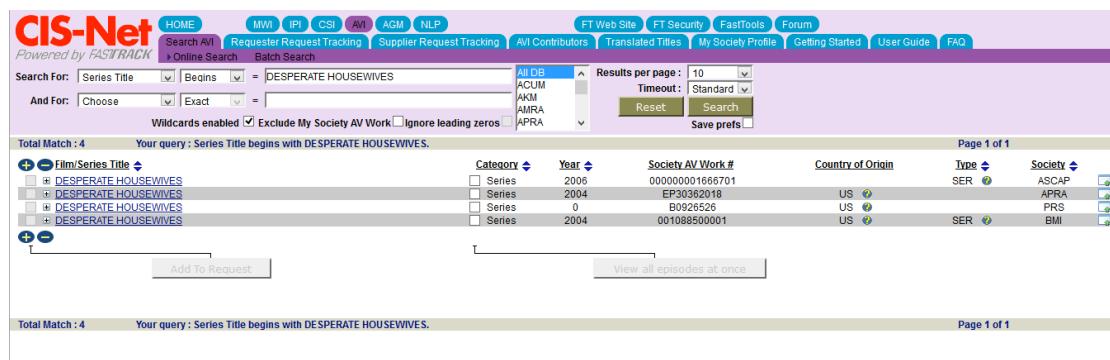

Additionally, the AV Detail frame provides the following functionality:

- **'Add To Request' Button:** clicking the 'Add to Request' button allows the AV work to be added to a basket.
- **'Back' Hyperlink:** returns you to the previous search on the AV Work Selection frame.

2.3 Episodes for the same Series provided by more than one Society³

In some cases it is possible that several societies have submitted the same series to the AVIndex because each society has an interest in a few episodes of the series (e.g. Desperate Housewives). As a result the same series is displayed several times.

Figure 12: Series Listing page

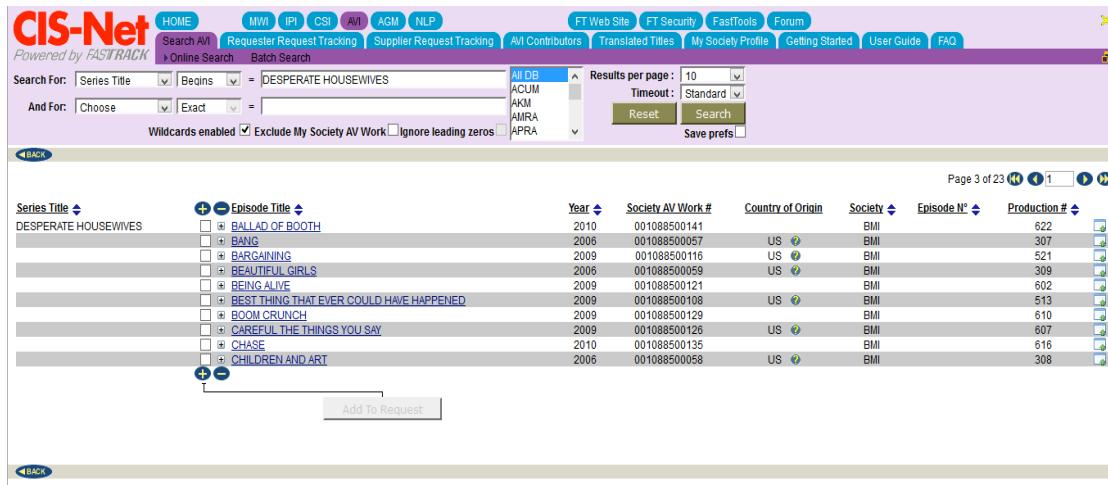

The screenshot shows a search results page for the series 'DESPERATE HOUSEWIVES'. The search query is 'Series Title Begins = DESPERATE HOUSEWIVES'. The results table has columns for Category, Year, Society AV Work #, Country of Origin, Type, and Society. There are four entries, all from 2004, with Society AV Work #s EP30362018, B0926526, and 001088500001. The 'View all episodes at once' button is visible at the bottom.

Category	Year	Society AV Work #	Country of Origin	Type	Society
Series	2004	EP30362018	US	SER	ASCAP
Series	2004	B0926526	US	SER	APRA
Series	0	001088500001	US	SER	PRS
Series	2004	001088500001	US	SER	BMI

You can view all the episodes of the same series into one page independently from the contributor by clicking on the "View all episodes at once" button. The CIS-Net AVI will display the Episodes List page.

³ See also Tips & Tricks # 19

Figure 13: Episode Listing Page

The screenshot shows the CIS-Net Episode Listing Page. At the top, there's a navigation bar with links for HOME, MW, IPI, CSI, AVI, AGM, NLP, FT Web Site, FT Security, FastTools, Forum, Search AVI, Requester Request Tracking, Supplier Request Tracking, AVI Contributors, Translated Titles, My Society Profile, Getting Started, User Guide, and FAQ. Below the navigation bar, the search criteria are set to "Search For: Series Title" with "Begins" selected and the value "DESPERATE HOUSEWIVES". The "And For:" dropdown is set to "Choose" with "Exact" selected and the value " ". There are checkboxes for "Wildcards enabled" and "Exclude My Society AV Work" (unchecked), and a checkbox for "Ignore leading zeros" (unchecked). The search results are displayed in a table with columns: Series Title, Episode Title, Year, Society AV Work #, Country of Origin, Society, Episode N°, and Production #. The results show various episodes from the series, such as "BALLAD OF BOOTH" (Year 2010, Work # 001088500141, US, BMI, Episode N° 622), "BANG" (Year 2006, Work # 001088500057, US, BMI, Episode N° 307), and "BARGAINING" (Year 2009, Work # 001088500116, US, BMI, Episode N° 521). The table has sorting arrows for all columns. At the bottom of the page, there are "Add To Request" buttons and a "BACK" link.

Series Title	Episode Title	Year	Society AV Work #	Country of Origin	Society	Episode N°	Production #
DESPERATE HOUSEWIVES	BALLAD OF BOOTH	2010	001088500141	US	BMI	622	
	BANG	2006	001088500057	US	BMI	307	
	BARGAINING	2009	001088500116	US	BMI	521	
	BEAUTIFUL GIRLS	2006	001088500059	US	BMI	309	
	BEING ALIVE	2009	001088500121	US	BMI	602

	CAREFUL THE THINGS YOU SAY	2009	001088500126	US	BMI	607	
	CHASE	2010	001088500135	US	BMI	616	
	CHILDREN AND ART	2006	001088500058	US	BMI	308	

3 AV Batch Matching Service

3.1 Introduction

Introduced to the AVI in v4.7, is the AV Batch Matching Service providing a user-friendly matching service permitting societies to identify in bulk audiovisual performances and inquiry lists against the AVI database. This service returns to the submitter a list of potential matching audiovisual works.

The screenshot shows the CIS-Net AVI Batch Search interface. At the top, there's a purple header bar with the CIS-Net logo and various menu links like HOME, MMI, IPI, CSI, AVI, AGM, NLP, FT Web Site, FT Security, FastTools, Forum, etc. Below the header, the main search form is displayed. It includes dropdowns for 'Submission date' (set to 'All') and 'Results/page' (set to '20'), a 'Search' button, and a checkbox for 'MM/DD/YYYY'. There are also fields for 'Or User ID' and 'Job status selection' (both set to 'All'). A note at the bottom of the search area says: 'Select your search options, and click the Search button to obtain the results.'

3.2 My Society Profile – New AV Batch Properties

The following properties are now available in the existing “My Society Profile” page under a new section called “Batch search”: This information is available to the Society Administrator.

- **Database selection:** Files submitted to the AV Batch are matched against the societies AV works available in the CIS-Net AVI. Select all DB to default matching preference to all contributing societies or select one or more societies from the list to target the match to specific ones.
- **Maximum Number of potential matches per input record:** The AV Batch uses this number to limit the number of responses relating to each input record. Only the matches with the highest overall accuracy are returned. The number must be between 1 and 25.
- **Minimum overall Title (Film/Series) Accuracy (%):** For each match, the AV Batch compares the calculated title accuracy score to the minimum overall title accuracy threshold so potential matches can be filtered in accordance with preferred accuracy level. For example, setting this value to 100% will return matches where titles (Film/Series) have 100% similarity only. Only values between 50 and 100 are accepted.
- **Minimum overall Title (Episode) Accuracy (%):** For each match, the AV Batch compares the calculated title accuracy score to the minimum overall title accura-

cy threshold so potential matches can be filtered in accordance with preferred accuracy level. For example, setting this value to 100% will return matches where titles (Episode) have 100% similarity only. Only values between 50 and 100 are accepted.

- **Minimum overall Participant (Director/Actor/Producer) Accuracy (%):** For each match, the AV Batch compares the calculated title accuracy score to the minimum overall title accuracy threshold so potential matches can be filtered in accordance with preferred accuracy level. For example, setting this value to 100% will return matches where participant names have 100% similarity only. Only values between 50 and 100 are accepted.
- **Minimum overall Accuracy Score (%):** For each match, the AV Batch compares the calculated title accuracy score to the minimum overall title accuracy threshold so potential matches can be filtered in accordance with preferred accuracy level. For example, setting this value to 100% will return matches where titles AND participant names have 100% similarity only. Only values between 50 and 100 are accepted.
- **Overall similarity score confidence threshold for auto-match confirmation (%):** To limit the risk of having all potential matches auto-confirmed by the system erroneously, the default value will be 100%. Only value between 85 and 100 will be accepted in this new property. The value 0 will be allowed as well for society preferring to bypass the auto-confirmed feature and review all the matches manually.
- **Society designated retention period threshold (e.g. 36 months):** This function indicates the period of retention of the unidentified metadata by the AV Barth Service. Unit values entered are specified as months (e.g. 12, 23, 36 months etc.)

The following property is now available in the existing “My Society Profile” page under the section called “Supplier”:

- **Maximum quantity of cue sheet items per request rule:** Maximum value is 100.

3.3 Submitting UPA Standard Files

All files submitted for matching must comply with the UPA Standard. Societies that have not implemented the UPA format have the use of the conversion tool (described in the next section) to submit UPA compliant files to the AV Batch matching service.

The standard for file transmission is the File Transfer Protocol (FTP). Users can also upload the file manually from the user interface but under certain conditions as described below.

- a) **Submitting UPA files via FTP:** The FTP method is the favoured method for file submission.

The existing CIS-Net AVI data exchange hub FTP site currently used to exchange AIR and AVR request files between societies has been enhanced by adding a new folder in the existing hierarchy to fulfill the following functional requirements:

- New sub folder called “Batch Requests” in each society’s dedicated FTP folder. The folder has been created at the same level as the existing folder called “requests” and “responses” within the FTP folder hierarchy.
- Within the ***Batch requests*** folder, a folder called **UPA** (Unidentified Performances for Audiovisual) exists. The **UPA** folder contains the “manual”, “automated”, “processed”, “rejected” and “report” sub-folders used by the automated file reception process.

From there:

- Each participant pushes their **standard UPA files** to their dedicated “batch request\UPA\manual” folder root when they want to process the file manually. In this scenario, users choose their submission preferences and activate the match process using the “Job Submission Center” User Interface.
- Each participant pushes their **standard UPA files** to their dedicated “batch request\UPA\automated” folder root when they want to process the file automatically. In this scenario, the AV Batch will activate the match process automatically using the default submission preferences.
- Each participant can pull rejected files from their dedicated “batch request\rejected” sub folder.
- Each participant can pull report files from their dedicated “batch request\report” sub folder.
- Each participant can pull processed files from their dedicated “batch request\processed” sub folder.

b) **Uploading UPA files manually:** Users can also upload the file manually from the user interface under the following conditions:

- The maximum file upload size should be no more than 10 Megabytes.
- Manually uploaded **standard UPA files** are copied to the logged in user’s society dedicated FTP folder (“batch request\UPA\manual”).

c) **Submitting converted files:** Additional format file (TXT or CSV type) submitted to the conversion tool and successfully converted to the UPA standard are submitted to the AV Batch matching process from the conversion tool’s user interface.

- Converted files submitted from the conversion tool’s user interface are copied to the logged in user’s society dedicated FTP folder (“batch request\UPA\manual”).

Please note that Societies can send their files or resend their files after correcting potential errors anytime, any day.

3.4 Submitting and Converting Non-Standard Formats for UPA Format page

A simple “conversion” tool has been created to reformat various files and lists into UPA compliant files.

3.4.1 Additional format files to be converted - method of submission

Alternative formats (CSV or text) requiring conversion can be transferred via FTP into a dedicated FTP folder or uploaded manually from the user interface. The manual upload will be possible under the following conditions: The maximum file upload size should not exceed 10 Megabytes (zipped or unzipped).

- a) **Submitting Additional format files via FTP:** The existing CIS-Net AVI data exchange hub FTP site currently used to exchange AIR, AVR, AVI, UPA files between societies has been improved by adding a new folder in the existing hierarchy.

A sub folder called “To convert” is in each society dedicated FTP folder. The folder has been created at the same level as existing folder called “requests” and “responses” within the FTP folder hierarchy as per illustration hereafter.

The “**To convert**” folder additionally contains the traditional “processed”, “rejected” and “report” sub-folders that have been used by the automated file reception process.

Push and pull transmissions:

- Each participant pushes their **CSV and Text files** to their dedicated “batch request\To convert” folder root when they want to convert a file to the UPA format.
- Each participant can pull rejected files from their dedicated “batch request\To convert\rejected” sub folder.
- Each participant can pull report files from their dedicated “batch request\To convert\report” sub folder.
- Each participant can pull converted files from their dedicated “batch request\To convert\processed” sub folder.

- b) **Uploading UPA files manually:** Users can upload the file manually from the user interface but under the following condition: The maximum file upload size shouldn't exceed 10 Megabytes (zipped or unzipped). Manually uploaded **CSV or Text files** are copied to the logged in user's society dedicated FTP folder (“**batch request\To convert**”).

3.4.2 Accessing the Conversion tool page

The user can access the new “Converting non-standard formats to UPA Format” page by selecting the menu “Search AVI” of the AVI component and the respective sub menus called “Batch Search” and “Convert non-UPA” as per illustration below. The rights to access this new page will be based on the Society’s Security access rights credentials assigned to the logged in user.

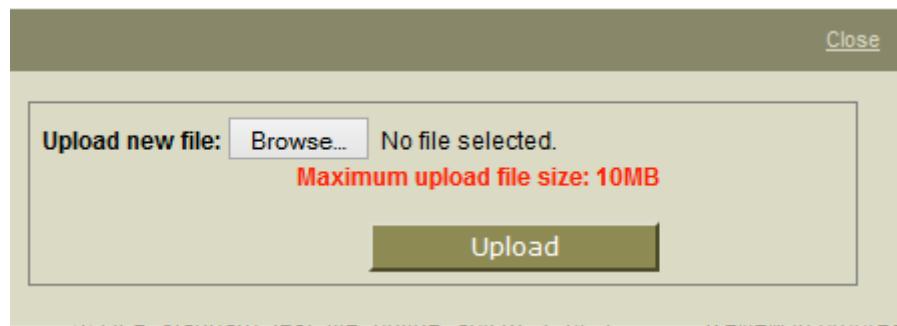

3.4.3 Converting non-standard formats to UPA Format page

Once the submenu option is selected, the user will view a list of files submitted to the logged in user’s society dedicated FTP folder (“batch request\to convert”). Newly detected files will be flagged as “New” in the user interface even if the file name already exists.

3.4.3.1 Uploading UPA files manually:

Upload new file Icon: This button is always visible and is accessible from the top left corner of the blank section of the page underneath the status line (please refer to mockup below for illustration). The user uses this button to manually upload non-standard files from the “Converting non-standard formats to UPA” page. Clicking on the “Upload” icon displays the following information in a small embedded frame:

3.4.3.2 Maintain Conversion Templates:

The user can click on the Maintain Template button to view, create and edit conversion templates. This button is always visible and is accessible from the top left corner of the blank section of the page underneath the status line (please refer to mockup below for illustration). Clicking on the “Maintain Template” icon activates a new page called “Non-standard conversion templates maintenance”.

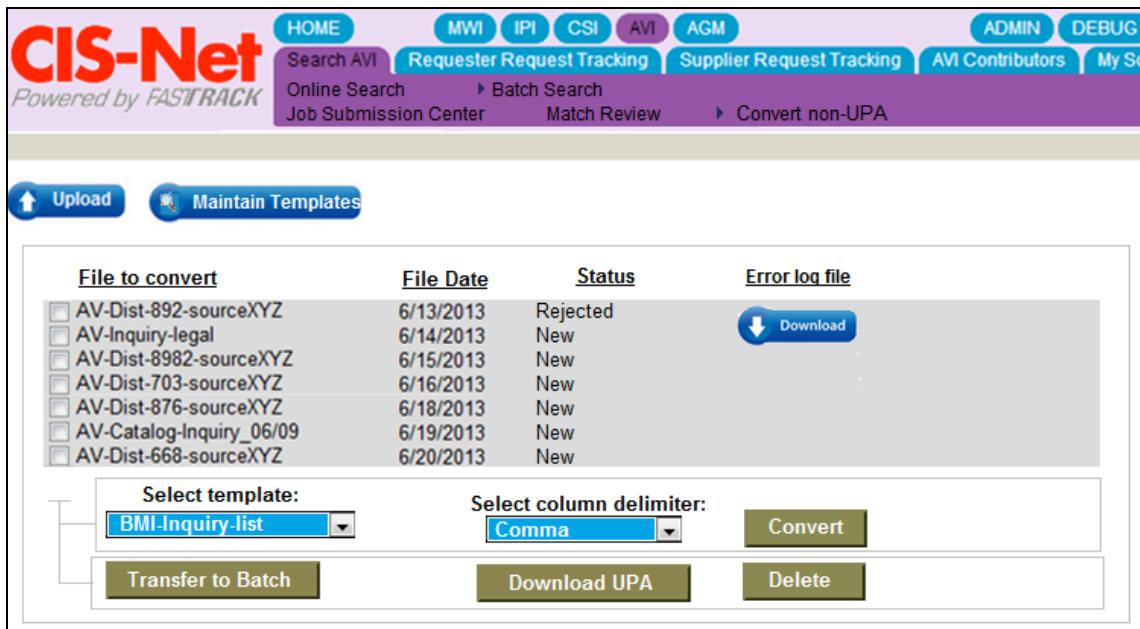

3.4.3.3 Listing the information:

The information below is displayed each time the page is accessed from the sub-menu called “Convert non-UPA”.

- **Entry line selection check box:** the user can select or deselect each entry individually by selecting or un-selecting the appropriate check box.
- **File name:** file name as retrieved on the FTP folder.
- **Process status:** the process status denotes the current processing step of the submitted file. A file can be “New”, “Converted”, “Transferred” or “Rejected”.
- **File date:** date when the process retrieved the submitted file from the society dedicated FTP folder.
- **Error log:** The errors causing the file rejection will be captured in a log file. The log file if available can be downloaded using the download button.

Each Match Status block (a block is composed of several entries of the same Process Status) have a different background color to differentiate them (please refer to mockup screen below).

Mockup Illustration:

File to convert	File Date	Status	Error log file
<input type="checkbox"/> AV-Dist-892-sourceXYZ	6/13/2013	Rejected	Download
<input type="checkbox"/> AV-Inquiry-legal	6/14/2013	New	
<input type="checkbox"/> AV-Dist-8982-sourceXYZ	6/15/2013	New	
<input type="checkbox"/> AV-Dist-703-sourceXYZ	6/16/2013	New	
<input type="checkbox"/> AV-Dist-876-sourceXYZ	6/18/2013	New	
<input type="checkbox"/> AV-Catalog-Inquiry_06/09	6/19/2013	New	
<input type="checkbox"/> AV-Dist-668-sourceXYZ	6/20/2013	New	

Select template: **BMI-Inquiry-list** Select column delimiter: **Comma** **Convert**

Transfer to Batch **Download UPA** **Delete**

3.4.3.4 Action buttons:

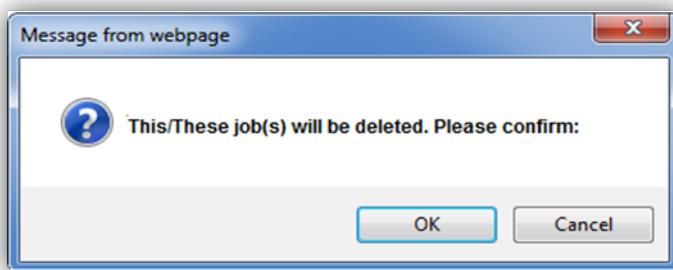

When consulting the list, the user can select multiple entries from the list (by clicking on the checkbox at the beginning of each line) and proceed with the following actions:

- Convert:** The user clicks on the “Convert” button to convert the content of the selected file to the UPA Standard based on the selected Conversion Template. This button should be enabled only when: the selected entry has **the process status of New and the user has selected a valid “Conversion template”.**

Conversion template selection box: the Template selection box includes all templates names available for the logged on society code. The Conversion template list defaults to the option “Select template” each time the page is activated or refreshed. The convert button will be disabled when the selected option is equal to “Select template”. The user clicks on the Maintain Template button to view, create and edit conversion templates. The conversion will be aborted if no conversion template is selected (“Select template” option). Once the conversion template is selected, the file Conversion process described below is executed. The user is prompted with a warning message indicating that the process may take a while.

Column delimiter selection box: the following options are available in the list: comma, pipe, tab and semicolon.

- Delete button:** The submitting society’s user clicks the “Delete” button to delete the selected file and subsequent conversion tracking records. The button is enabled for all processing statuses but only one file can be deleted at the time. Once the button is selected, the user is prompted to confirm the deletion of the selected entry as follows:

Once the user confirms the deletion’s request by selecting the OK button all records for the file will be physically deleted from the Conversion data store.

- Transfer to Batch button:** The submitting society’s user clicks the “Transfer to Batch” button to send the converted file to the Job Submission Center of the AV Batch. This button is enabled only when the selected entry(s) has **the processing status of Converted**. Once the button is selected, the Converted file is transferred from the conversion tool working area to the logged in user’s society dedicated FTP folder (“batch request\UPA\manual”).

4. **Download UPA**: The submitting society's user clicks the "Download UPA" button to download the converted file to its own desktop or its internal network. This button is enabled only when the selected entry(s) has **the processing status of Converted**. Once the button is selected, the download file process will start.

3.4.4 “Non-standard conversion template maintenance” page

Select: Create new template ▾

The above page permits the user to create a new conversion template, view a template and modify existing conversion templates. The conversion templates permit the user to map the columns from their proprietary file format to the following UPA standard data elements:

UPA data elements mapping frame:

- The UPA data elements are listed on the page under the column header “**UPA Standard Fields**”. Individual data entry input boxes are available in front of each UPA Standard data element under the header “**My file column #**”. The users use the input boxes to map the columns number from their proprietary file format to the corresponding UPA standard data elements. Listed UPA standard data elements that cannot be mapped to a column should be left as “-”
- **UPA data element to list in the frame:** Film Series title, Episode Title, Episode Number, List of Actors names, Production Company names, Director names, Year of Production, Composer names, Duration, Country of origin, AV Type, Affiliated Society Code, Affiliated Society Name, Submitter Internal Reference number, Performance Start Date, AV Language code, Local title, Local episode title, Supplying Society AV Work Number, TIS Numeric Code, Performance Source Detail, Performance Count, Required By Date, Requestor AV Work Number and V-ISAN.

- Special “text to column” input boxes on the following UPA standard data elements “List of Actors names, Production Company names and Director names and Country of Origin” allow the user to automatically split the content of the selected column into multiple values for the same UPA data element. For example, the column “List of Actors” with the following content “BRAD PITT / JEAN DUJARDIN” can be reformatted in two distinct **actor** values (“BRAD PITT” and “JEAN DUJARDIN”) based on the submitter proprietary character (“/”).
- Two lines have been dedicated for actors since some societies list the actors in two distinct columns.

Illustration:

Society B sends an inquiry list using the CSV file format. The columns provided in the files are as follows:

Society B CSV file		
Col. №	Column Name	Data sample
A	Society B Internal ID (WIC)	345964450
B	AV title	FOR LOVE OR MONEY IV 3 FINAL FIVE
C	Authors	[RE] Buechler/John Karl
D	Duration	3000
E	Year of Production	2004

In this case, when mapping Society B’s file columns to the UPA format using the proposed user interface, the user will pick the following UPA data elements and associated column values:

- Submitter Internal Reference number** input box is set to A (Column A in My file to convert)
- Film/Series title** input box is set to B (Column B in My file to convert)
- Composer names** input box is set to C (Column C in My file to convert)
- Duration** input box is set to D (Column D in My file to convert)
- Year of production** input box is set to E (Column E in My file to convert)

The values found in columns A, B, C, D and E will be used in the newly created UPA standard file to populate respectively the following UPA data elements: Submitter Internal Reference number, Film/Series title, Composer names, Duration input and Year of production. So any society can convert/ create UPA and minimize their internal development cost. We are promoting the standard by allowing each society to participate and produce UPA files but in accordance to their internal limitation and timelines.

Templates that have been created can also be amended and deleted.

3.4.5 Conversion process

The conversion process performs the following validations before reading the input data:

- **File type validation:** Only CSV and TXT file types delimited by characters such as a comma, pipe, tab, semicolon or other will be accepted.
Note about Microsoft Excel format: Societies submitting Excel format will be required to save their files as CSV file format before submitting their files to the conversion tool. Excel has the feature “save as” build in so the expected effort required on the submitting societies will be minimal.
- **Conversion template selection:** the conversion will be aborted if the user does not select the required conversion template.

The following field validations for each record will be required:

- Film/Series title is mandatory. If missing then record is rejected (record level rejection)
- Category field is default to “F” if “Episode Title” OR “Episode Number” is null. Otherwise category is equal to S
- If Category = F then the “Director names” OR the “Year of Production” must be provided (record level rejection)
- The newly created UPA file must match the UPA records validation rules described above. Records failing the UPA record validation will be rejected (record level rejection).
- Submitted files that are not TXT or CSV will be rejected (file level rejection).

Error log: each rejected record is added to the error log with the description of the error. The error log is designed based on the following requirements:

- The layout of the error log is a simple human readable report (this is not an EDI acknowledgement layout).
- A specific sentence at the beginning of the report will indicate if the full file was rejected or just few records (full rejection or partial rejection).

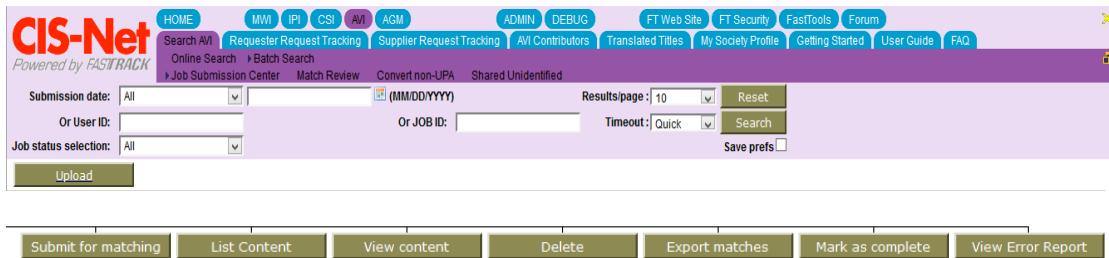

UPA format file naming convention: the AV Batch will apply the file naming convention described in the CISAC UPA standard format for all UPA files.

3.5 Transfer to Job Submission Center

Uploading files both by FTP and manually is covered in section 3.3 “Submitting UPA Standard Files.

3.6 Job Submission Center

The Job Submission Center interface allows the user to track and control submitted jobs, review processing statuses and view submission content. Upload new files, delete submitted jobs or activate matching process for unprocessed submitted jobs. Furthermore the user can list the content of a matched file, view the content of matched file, delete the matched file, export the matches, mark as complete the matched file and view any errors in the view error report.

The screenshot shows the CIS-Net Job Submission Center interface. At the top, there's a purple navigation bar with links like HOME, MM, IPI, CSI, AVI, AGM, ADMIN, DEBUG, FT Web Site, FT Security, FastTools, Forum, and FAQ. Below the bar, there's a search section with fields for 'Submission date' (a dropdown menu), 'Or User ID' (a text input), 'Job status selection' (a dropdown menu), and 'Or JOB ID' (a text input). There are also buttons for 'Reset', 'Search', 'Upload', and 'Save prefs'. At the bottom of the search area, there are several buttons: 'Submit for matching', 'List Content', 'View content', 'Delete', 'Export matches', 'Mark as complete', and 'View Error Report'.

From the “Job status selection” are the following categories:

Select “Unprocessed” jobs: when the user selects this option, all submitted jobs where Job Status = ‘Unprocessed’ will be retrieved from the job submission data store for the selected contribution period and society user code.

Select “Review in progress” jobs: when the user selects this option, all submitted jobs where Job Status = “Review in progress” will be retrieved from the job submission data store for the selected contribution period and society user code.

Select “Matching in progress” jobs: when the user selects this option, all submitted jobs where Job Status = ‘Matching in progress’ will be retrieved from the job submission data store for the selected contribution period and society user code.

Select “Completed” jobs: when the user selects this option, all submitted jobs where Job Status = ‘Completed and archived’ will be retrieved from the job submission data store for the selected contribution period and society user code.

3.7 Submit for Match (re-submit)

Submitting societies can send small, medium and large files to be matched against the AVI central database. Due to the potential performance bottleneck associated with matching large amounts of bulk data there are a few rules:

- ✓ **Rule 1- Submission Frequency:** Only one file per society can be processed at a time but societies can submit more than one file at any given time (files will be queued).
- ✓ **Rule 2 - Queuing multiple submissions:** Multiple files submitted by the same society are queued and processed in the chronological order of reception. A queued file will be processed as soon as the previous file has been completely matched.

- ✓ **Rule 3 - Simultaneous processing:** The matching process manages a maximum of 20 jobs simultaneously (maximum database searches during peak workload will be $50,000 * 20 = 1,000,000$) (files will be queued).
- ✓ **Rule 4 - Response time limit (Service level agreement):**
 - For submitted files containing less than 5,000 records: the file processing cannot exceed 24 hours provided that the technical environment is running under "normal" operating conditions (from reception into the CIS-Net AVI to matching result).
 - For submitted files containing more than 5,000 records: file processing cannot exceed 5 days provided that the technical environment is running under "normal" operating conditions (from reception in CIS-Net AVI to matching result).

Cancelled jobs can be resubmitted by the user, to process unmatched records. The user will access the user interface and select the "Submit for matching" button of the Job Submission Job Center page to do so.

The warning message labeled "Matching cancelled – response time exceeded" will be displayed in the Submission Job Center page as follow:

Job activities timeline		
Last recorded activity date:	10/01/2013	
Requested due date:	12/12/2013	
Job creation date:	08/30/2013	
		! Matching cancelled – response time exceeded

3.7.1 Data Source

All matching and searching rules are performed against the metadata stored in the existing CIS-Net AVI online database. This database is a replication of the main CIS-Net AVI database reserved for the AVI contributors and AVI duplicate matching.

3.7.2 Learned match table

Consolidated and standardized metadata is matched against the learned match table to verify if the entry has already been matched and confirmed by the submitting society.

3.7.3 Matching process and Matching Rules

Retrieving society submission preferences: in order to comply with the user preferences, the process retrieves the following information from the "Job Submission" data store:

Job submission preferences section:

- **Database selection:** (All suppliers or multiple selections).
- **Expected end result:** Match and request cue sheet or match only.

- **Requested due date:** The requested due date for processing the submitted file and reception of the associated cue sheets.
- **Comment input box:** Freeform comment that will be added to the cue sheet requests at the end of the process.
- **Submitted on behalf of requesting society + society name:** The 3rd party society name from the drop down list when submitting a file on behalf of another society. The default is “None”.
- **Original requesting society email address input box:** The email address of the 3rd party society.
- **Maximum Number of potential matches per input record:** The AV Batch uses this number to limit the number of responses relating to each input record. Only the matches with the highest overall accuracy are returned. The number must be between 1 and 25.
- **Minimum overall Title (Film/Series) Accuracy (%):** For each match, the AV Batch compares the calculated title accuracy score to the minimum overall title accuracy threshold so potential matches can be filtered in accordance with preferred accuracy level. For example, setting this value to 100% will return matches where titles (Film/Series) have 100% similarity only. Only values between 50 and 100 are accepted.
- **Minimum overall Title (Episode) Accuracy (%):** For each match, the AV Batch compares the calculated title accuracy score to the minimum overall title accuracy threshold so potential matches can be filtered in accordance with preferred accuracy level. For example, setting this value to 100% will return matches where titles (Episode) have 100% similarity only. Only values between 50 and 100 are accepted.
- **Minimum overall Participant (Director/Actor/Producer) Accuracy (%):** For each match, the AV Batch compares the calculated title accuracy score to the minimum overall title accuracy threshold so potential matches can be filtered in accordance with preferred accuracy level. For example, setting this value to 100% will return matches where participant names have 100% similarity only. Only values between 50 and 100 are accepted.
- **Minimum overall Accuracy Score (%):** For each match, the AV Batch compares the calculated title accuracy score to the minimum overall title accuracy threshold so potential matches can be filtered in accordance with preferred accuracy level. For example, setting this value to 100% will return matches where titles AND participant names have 100% similarity only. Only values between 50 and 100 are accepted.

The following processes are executed sequentially for each record contained in the “Consolidated input” data store.

3.7.3.1 Data standardization:

Input records, once consolidated, are standardized as per the rules defined in the document titled “CIS-Net_CIS-AVINDEX-01AVIndexIntegrationFullDetailFunctionalSpecifications _00 09_en.docx” under paragraph “5.3.2.2/ Standardizing Titles, Episodes numbers and Production numbers”.

3.7.3.2 Scoring matches

Each match includes a similarity score also known as accuracy score and a confidence score. The similarity score:

- Is a mathematical measure of the textural similarity between the input record and the record returned from the AVI database once a match is established.
- Is calculated based on the Edit Distance concept adopted in the existing AV Work matching.

The confidence score:

- Is a measure of how likely it is that a particular value is the best match among the matches found against the AVI

This confidence level will be defined based on the number of criteria used for establishing the match and the “nature” of the comparison (exact versus fuzzy). For example, the probability of finding a false match is higher when the match is established using the combination of two criteria (“Series + Episode titles”) rather than 3 or 4 criteria (“Series + Episode Titles + Country of Origin”). In addition the confidence in the match should be considered even higher when the match’s result is established using an exact comparison rather than a fuzzy comparison. The similarity score should be considered as the main matching accuracy indicator so it will need to be weighted accordingly in the overall accuracy score calculation ((Similarity score(s) X weight) + Confidence score) / ((1 * weight) + 1)).

All “consolidated input” records that have been standardized are subject to the following matching rules:

Finding potential matches:

1. Each input record with a “**Match Status Indicator**” equal to “**Unmatched**” is checked to determine whether there is a potential matching record present on the AVIndex for selected society(ies) (**Database selection – submission preference**).

Warning: The matching process will perform the sequential matching as long as the **Job Status** is equal to “**Matching in Progress**”. For each record, the matching rules will verify if the Job Status is still equal to “Matching in progress”. If the Job Status is no longer equal to “Matching in Progress” then the matching service will stop (Job Status can be changed by the “response time validation” process when the matching duration has exceeded the agreed upon response time).

2. An unique Input Identifier Key will be established for each record by combining the following input fields (same as consolidation rule to de-duplicate identical rec-

ords): 'Film/Series title' + 'Episode Title' + 'Episode Number' + 'Year of Production' + 'Director names' + 'List of Actors names' + 'Production Company names' + 'Country of origin' + AV Work number + Local title + local episode title. The unique Input Identifier Key and the submitting society code will be matched against the learned match table to find a previously confirmed match. If a record is found then the process verifies if the previously matched AV entry (AV Work Number / cue sheet) still belongs to the AV supplier (no change in music interest) before reusing the existing match. If the AV Work number is no longer active in the AVIndex (rejected or deleted) then the process verifies if a duplicate entry for another society exists in the 'Duplicate Matching' data store. If a duplicate exists and the duplicate is an active entry in the AVIndex then **the active duplicate is used in the match result and the learned match**. The following processes will be executed:

- "Potential matches" data store update – please refer to section "**8. Storing and updating relevant information once a match is found**"
- Learned match table and match statuses data updates - please refer to section "**Updating data when a match is confirmed**" process
- Adding the confirmed match to the cue sheet request please refer to "**Adding confirmed match to the Cue sheets – 'Basket' data store**" process

3. Consolidated and standardized metadata not found in the learned match table is matched against the CIS-Net AVI online database using, when appropriate the following matching rules:
4. Series:
 - **MR 3.1:** If the input record is for a Series, signified by the *Category* being equal to 'S', both the *input edited AV work title* and the *input edited episode title* are checked against existing records in the current AVIndex. If the edited episode title is spaces then proceed with next rule. If an exact match is found it is deemed to be a potential match. The similarity scores (AV work and episode titles) are then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 70%.
 - **MR 3.2:** The *input edited AV work title* and *input edited episode numbers and Input Country of Origin (not null)* are checked against the *existing edited AV work title* and *existing edited episode numbers* and *existing Country of Origin (not null)* records in the current AVIndex. If an exact match is found it is deemed to be a potential match. The similarity score (AV work title) is then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 100%.
 - **MR 3.4:** The *input edited AV work title* and *input edited episode title* and *Input Country of Origin (not null)* are checked against the *existing edited AV work title* and *existing edited production number* and *existing Country of Origin (not null)* records in the current AVIndex. If an exact match is found it is deemed to be a potential match. The similarity scores (AV work and episode titles) are then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 100%.

- **MR 3.6:** The **input edited AV work title** and **input edited episode number** and **Input Country of Origin (not null)** are checked against the **existing edited AV work title** and **existing edited production number** and **existing Country of Origin (not null)** records in the current AVIndex. If an exact match is found it is deemed to be a potential match. The similarity score (AV work) is then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 100%.
- **MR 3.10A:** The **input edited AV work title** and **input edited episode title** and **Input Year(s) of Production (if Year of Production not null and not equal to 0000 then take into consideration the input year and the year+1 and the year-1 range for the match; e.g. input year of production is 2010, then match using 2009 (-1), 2010 and 2011 (+1) values)** are checked against the **existing edited AV work title** and **existing edited production number** and **existing Year of Production (not null and not equal to 0000)** records in the current AVIndex. If an exact match is found then it is deemed to be a potential match. The similarity scores (AV work and episode titles) are then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 100%.
- **MR 3.20 (New):** If the input edited AV work title is composed of more than 1 word, then the **input edited AV title words** and **input edited episode title words** and **Input Average duration (Duration tolerance calculation*)** are individually checked against the **existing edited AV title words** and **existing edited episode title words** and **existing Total Duration (Duration tolerance calculation*)** records in the current AVIndex (contains match). If an exact match (all words match) is found it is deemed to be a potential match. The similarity scores (AV work and episode titles) are then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 100%.

*Duration tolerance calculation: (**Input Total Duration in seconds - existing Total Duration in seconds**) **must be less or equal to 120 seconds threshold**. **Note: 0 durations are accepted in the calculation, no defaulting to 0 is required.** Due to the nature of the matching rule (episode title words) we should accept 0 total duration in this case only to limit the potential to create false match between different episodes of the same series (0 – 1:32:00 = 1:32:00)

- **MR 3.21 (New):** The **input edited AV translated/local work title** and the **input edited translated/local episode title** are checked against the **existing edited AV work title** (alternate titles) and **existing edited AV episode title** (alternate titles) records in the current AVIndex. If the edited episode title is spaces then proceed with next rule. If an exact match is found it is deemed to be a potential match. The similarity scores (AV work and episode titles) are then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 70%.
- **MR 5.3 (New):** The **input Supplier Society AV Work Number** (not null not 0) and the **input edited episode title words** are checked against the **existing Society AV Work Number** and the **existing edited episode title words** in the current AVIndex. If an exact match is found it is deemed to be a potential match. The similarity score (episode titles) is then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 70%.

5. Feature Film, TV Film, One-off, etc.:

- **MR 4.1:** If the Category is equal to 'F' then the record is for each film titles, so both the edited AV work title and the input year of Production (if Year of Production not null and not equal to 0000) are checked against the current AVIndex, again if an exact match is found it is deemed to be a potential match record. The similarity score (AV work title) is then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 70%.
- **MR 4.3:** If the input edited AV work title is composed of more than 1 word, then the input edited AV title words and the year of Production (if Year of Production not null and not equal to 0000) are checked against the existing edited AV title words and the existing year of production records in the current AVIndex (contains match). If an exact match (all words match) is found it is deemed to be a potential match. The similarity score (AV work title) is then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 70%.
- **MR 4.5:** If the input edited AV work title is composed of more than 1 word, then the input edited AV title words and input participant names words (AV Director record only) and input average Duration (Duration tolerance calculation*) are checked against the existing edited AV title words and existing participant names words and existing Total Duration (Duration tolerance calculation*) records in the current AVIndex (contains match). If an exact match (all words match) is found it is deemed to be a potential match (IDA matching practice – director field). The process will use the existing Participant Word table for perform the match. The similarity scores (AV work title and Participant) are then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 100%.

*Duration tolerance calculation: (Input Total Duration in seconds - existing Total Duration in seconds) must be less or equal to 60 seconds threshold

- **MR 4.6:** If the input edited AV work title is composed of more than 1 word, then the input edited AV title words and input participant names words (AV Actor record only) and input average Duration (Duration tolerance calculation*) are checked against the existing edited AV title words and existing participant names words and existing Total Duration (Duration tolerance calculation*) records in the current AVIndex (contains match). If an exact match (all words match) is found it is deemed to be a potential match. The process will use the existing Participant Word table for perform the match. The similarity scores (AV work title and Participant) are then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 100%.

*Duration tolerance calculation: (Input Total Duration in seconds - existing Total Duration in seconds) must be less or equal to 60 seconds threshold

- **MR 4.7:** If the input edited AV work title is composed of more than 1 word, then the input edited AV title words and input participant names words (AV Production Company record only) and input average Duration (Duration tolerance calculation*) are checked against the existing edited AV title words and existing participant names words and existing Total Duration (Duration tolerance calculation*) records in the current AVIndex (contains match). If an exact

match (all words match) is found it is deemed to be a potential match. The similarity scores (AV work title and Participant) are then defaulted to 1 since it is an exact match. The process will use the existing Participant Word table for perform the match. Suggested confidence score for this matching rule is 100%.

*Duration tolerance calculation: (*Input Total Duration in seconds - existing Total Duration in seconds*) must be less or equal to 60 seconds threshold

- **MR 4.20 (New):** The **edited Translated/Local AV work title** and the input **year of Production (if Year of Production not null and not equal to 0000)** are checked against the **existing edited AV work title** (alternate titles) and **the existing year of production** records in the current AVIndex. If an exact match is found it is deemed to be a potential match. The similarity score (AV work title) is then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 70%.

Note: the new matching rules above have been created with the aim of maximizing the translated titles project's ROI.

6. Series and films

- **MR 5.1 (New):** The **input Society AV Work Number** (not null not 0) and the **input edited AV title words** are checked against **existing Society AV Work Number** and **existing edited AV title words** in the current AVIndex. If an exact match is found then it is deemed to be a potential match. The similarity score (AV work title) is then defaulted to 1 since it is an exact match. Suggested confidence score for this matching rule is 70%.

7. Fuzzy matching

If **no matches found** then the following fuzzy matching rules are executed:

If the **Category** is equal to 'S' then proceed with the following rules:

- **MR 7.1 (New):** the **input edited AV work title** and the **input edited episode title** are checked against existing records in the current AVIndex **using fuzzy technique on both criteria**. If the edited episode title is spaces then proceed with next rule. If a match(s) is found it is deemed to be a potential match, the similarity scores for the titles (AV work and episode titles) are then calculated using the edit distance methodology. Suggested confidence score for this matching rule is 65%.
- **MR 7.2 (New):** The **input edited AV work title** and **input edited episode numbers** are checked against the **existing edited AV work title** and **existing edited episode numbers** records in the current AVIndex **using fuzzy technique on the titles criteria**. If a match(s) is found it is deemed to be a potential match. The similarity score for the titles (AV work) is then calculated using the edit distance methodology. Suggested confidence score for this matching rule is 65%.
- **MR 7.3 (New):** The **input edited AV work title** and **input edited episode number** are checked against the **existing edited AV work title** and **existing edited production number** records in the current AVIndex. If an exact match is found it

is deemed to be a potential match. The similarity score for the titles (AV work) is then calculated using the edit distance methodology. Suggested confidence score for this matching rule is 65%.

- **MR 7.4 (New):** The *input edited AV work title* and *input edited episode title* are checked against the *existing edited AV work title* and *existing edited production number* records in the current AVIndex *using fuzzy technique on both titles*. If a match(s) is found then it is deemed to be a potential match. The similarity scores for the titles (AV work and episode titles) are then calculated using the edit distance methodology. Suggested confidence score for this matching rule is 65%.
- **MR 7.5 (New):** The *input edited AV translated/local work title* and the *input edited translated/local episode title* are checked against the *existing edited AV work title* (alternate titles) and *existing edited AV episode title* (alternate titles) records in the current AVIndex. If the translated edited Av work or episode titles are null then proceed with next rule. If a match(s) is found it is deemed to be a potential match. The similarity scores for the titles (AV work and episode titles) are then calculated using the edit distance methodology. Suggested confidence score for this matching rule is 65%.

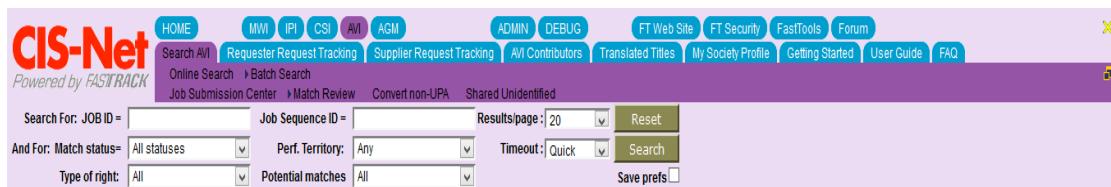

If the Category is equal to 'F' then proceed with the following rules:

- **MR 8.1 (New):** the *edited AV work title* and the input *Year of Production (if Year of Production not null and not equal to 0000)* are checked against the current AVIndex *using fuzzy technique on the AV work title criteria*. If a match(s) is found then it is deemed to be a potential match record. The similarity score for the title is then calculated using the edit distance methodology. Suggested confidence score for this matching rule is 65%.
- **MR 8.2 (New):** the *input edited AV title* and *input participant names* (AV Director record only) are checked against the *existing edited AV title* and *existing participant names* records in the current AVIndex *using fuzzy technique on each criteria*. If a match(s) is found it is deemed to be a potential match. The similarity scores for the title and the participants are then calculated using the edit distance methodology. Suggested confidence score for this matching rule is 65%.
- **MR 8.3 (New):** the *input edited AV title* and *input participant names* (AV Actor record only) are checked against the *existing edited AV title* and *existing participant names* records in the current AVIndex *using fuzzy technique on each criteria*. If a match(s) is found it is deemed to be a potential match. The similarity scores for the title and the participants are then calculated using the edit distance methodology. Suggested confidence score for this matching rule is 65%.
- **MR 8.4 (New):** the *input edited AV title* and *input participant names* (AV Production Company record only) are checked against the *existing edited AV title* and *existing participant names* records in the current AVIndex *using fuzzy technique on each criteria*. If a match(s) is found it is deemed to be a potential match. The similarity scores for the title and the participants are then calculated using the edit distance methodology. Suggested confidence score for this matching rule is 65%.

- **MR 8.5 (New):** the edited Translated/Local AV work title and the input Year of Production (if Year of Production not null and not equal to 0000) are checked against the existing edited AV work title (alternate titles) and the existing year of production records in the current AVIndex using fuzzy technique on the titles criteria. If a match(s) is found it is deemed to be a potential match. The similarity score for the titles is then calculated using the edit distance methodology. Suggested confidence score for this matching rule is 65%.

3.8 Match Review / Content

The results of the matching process is accessed from the following screen:

The screenshot shows the CIS-Net Match Review interface. At the top, there's a navigation bar with links like HOME, MWI, IPT, CSI, AVI, AGM, ADMIN, DEBUG, FT Web Site, FT Security, FastTools, Forum, and various user profile and help links. Below the navigation is a purple header bar with the CIS-Net logo and 'Powered by FASTTRACK'. It includes links for Search AVI, Requester Request Tracking, Supplier Request Tracking, AVI Contributors, Translated Titles, My Society Profile, Getting Started, User Guide, and FAQ. Underneath the header is a search criteria frame with the following fields:

Search For: JOB ID =	Job Sequence ID =	Results/page: 20	<input type="button" value="Reset"/>
And For: Match status=	Perf. Territory: Any	Timeout: Quick	<input type="button" value="Search"/>
Type of right:	Potential matches	All	<input type="checkbox"/> Save prefs

3.8.1 Search criteria frame options:

Searching individual Job submission: The user will be able to search individual entries by entering the Job identifier and Job sequence ID.

Filtering the match results information by match status: Since the user can view 'Potential Matches', 'Confirmed matches', 'Un-matched' and 'Archived' records independently, the search criteria frame will include a selection box permitting to select one or several categories as follows:

Select "Potential matches": when the user selects this option, all records with a Match Status equal to 'Matched' are selected from the "**Consolidated input" data store**" for the selected job ID, job sequence ID and logged on user society code.

Select "Confirmed matches": when the user selects this option, all records with a Match Status equal to 'Confirmed' are selected from the "**Consolidated input" data store**" for the selected job ID, job sequence ID and logged on user society code.

Select "Un-matched": when the user selects this option, all records with a Match Status equal to 'Un-matched' are selected from the "**Consolidated input" data store**" for the selected job ID, job sequence ID and logged on user society code. This option permits the users to further audit the matching results by looking into un-matched metadata and researching false negative⁴ matches.

⁴ Occurs when system fails to link two records that should be matched – missed match.

Select “Archived”: when the user selects this option, all records with a Match Status equal to ‘Archived’ are selected from the “**Consolidated input” data store** data store for the selected job ID, job sequence ID and logged on user society code.

Select “All statuses”: when the user selects this option, all records with a Match Status equal to ‘Matched’, ‘Confirmed’, ‘Un-matched’ and ‘Archived’ are selected from the “**Consolidated input” data store** data store for the selected job ID, job sequence ID and logged on user society code.

Filtering the match results information by rights and territories: to further refine the research, the user can select specific information related to the AV performance such as type of right and territory, as follows:

- **Select “Type of right”:** the type of right selection box includes the following options: ‘Performing’, ‘mechanical’, ‘synchronized’ and ‘all’. The type of right search criteria is a “And for” to the previously selected search criteria (JOB ID + JOB SEQUENCE ID + Match Status + Logged on user society code + Performance type of right).
- **Select “Territory”:** the territory selection box permits to select one or several CISAC territories including “ALL” territories. The performance territory search criteria is a “And for” to the previously selected search criteria (JOB ID + JOB SEQUENCE ID + Match Status + Logged on user society code + Performance Type of right + Territory of Performance).

Filtering the match results information by potential matches: since the matching process includes several fuzzy matching rules, it is possible that some of the records retrieved from the “**Consolidated input” data store** have more than one potential matches saved in the “**Potential match result” data store**. Having an option to further narrow the selection by the number of potential matches would increase the review efficiency (e.g. select all potential matches = 1 order by match accuracy descending).

The possible values are based on incremental value of 1 between the value of 1 and 20. The user can select “ALL” options and the keyword “Unique”. The keyword “Unique” is listed between the “All” and “2” options (instead of “1”) as it is more meaningful from a user perspective. This list allows the user to select only the records where the aggregated total number of potential matches saved in the “**Consolidated input” data store** is equal to the selected value (All, Unique, 2, 3, 4, 5...19 and 20).

Standard buttons: The following standard buttons and options are required: Results per Page Selection Box, Timeout Selection Box, Reset Button, Search Button and Save Prefs. Option.

Once the user selects the required search criteria and clicks on the search button, the query results are displayed in various sections as follows:

3.8.1.1 Navigation and Shortcut key hyperlinks:

The following line composed of shortcut keys and navigation options is available at the top and bottom of each page.

The **shortcut key** section provides a list of letters, numbers and special characters. This section highlighted in different color scheme than the search criteria frame includes the following information and feature:

The following letters (A to Z), numbers (0 to 9) and special characters (e.g. * (")) are displayed within the outside borders (box). If an AV work title from the query result starts with any of the boxed characters then the boxed character hyperlink property is enabled (meaning the character is underline and the user is allowed to click on the underline character to select all AV work titles starting by the selected character).

[* () * 0 1 2 3 4 5 6 7 8 9 A B C D E F G H I J K L M N O P Q R S T U V W X Y Z ^ All]

The following standard buttons and options will be required:

- **Next / Previous Page Icon** and **Page x of y**
- **Back button:** this is the standard back button that will permit the user to leave the current page and return to the previous one (Job Submission Center). *The back button will be available only if the current Review page was activated from the “Job Submission Center” page or the “Shared un-identified” page.*

3.8.1.2 Job summary frame:

The job summary section provides information relevant to the selected job ID, job sequence ID, job submission status, date and submitter user ID. This section also includes several metrics by Match Status and also references several submission preferences as well. This section is available for each page and will be composed of the following lines:

- **Job information line:** Job identifier + ‘-‘ + job sequence ID, the Job status with the last recorded updated date in parentheses, the requested due date, the submitted on behalf of society name and user ID of the person or system that originally submitted the file (owner).
- **Metrics, total indicators line:** a second line underneath the Job Information line will include the following metrics:
 - Total number submitted: total number of records for the selected job ID and job sequence ID.
 - Total number of un-matched: total number of records for the selected job ID and job sequence ID where Match Status = “un-matched”.
 - Total number of potential matches: total number of records for the selected job ID and job sequence ID where Match Status = “Matched”.
 - Total number of confirmed matches: total number of records for the selected job ID and job sequence ID where Match Status = “Confirmed”.
 - Total number of archived entries: total number of records for the selected job ID and job sequence ID where Match Status = “Archived”.

Warning: the metrics are recalculated based on the selected job ID + job sequence ID and will be displayed each time the page is refreshed. *When a recalculated value is different than the previous value, then the particular counter is highlighted in a different color. The idea is to provide a visual confirmation indicator to the user each time an update occurs* (e.g. selecting the “Confirm match” button will decrease the number of “potential Matches” indicator and increase the number of “Confirmed” indicator).

- **Embedded search frame icon ():** A search icon at the beginning of the line reveals or hides a new embedded search criteria frame. This new search criteria frame provides the following search options:
 - **Select “Affiliate society name”:** the Affiliate Society Name selection box includes the list of all CISAC societies. The user can select multiple societies or chose the ‘Select All’ option. Once the user selects an Affiliate Society Name from the list and clicks on the “OK” button, the previous query result is refreshed to include only records where the society code provided in the original file is equal to the society code of the selected Affiliate Society Name.
 - **Select “Country of origin”:** the Country of Origin selection box includes the list of countries. The user can select multiple entries from the list or chose the ‘Select All’ option. Once the user selects a country name from the list and clicks on the “OK” button, the previous query result is refreshed to include only records where the “Country of origin” code is equal to the selected Country of Origin (s) code.
 - **Select “Performance Source”:** the Performance source selection box includes the list of sources as provided by the submitter of the file (since the provided sources are not standardized we need to list the ones provided in the file – e.g. BBC World). The User can select the ‘Select All’ option as well. Once the user selects a country from the list and clicks on the “OK” button, the previous query result is refreshed to include only records where the “Performance source” is equal to the selected Source.
 - **Multiple selections:** the search options listed above can be combined and each combined selection is considered as a “And for” type of search. For example, the user could select **Country of Origin** = “US or USA or United States or Estados Unidos” and **Affiliated Society Name** = “SESAC” and **“Performance Source”** = All.
 - **OK button:** this button permits to query the database using the newly added search criteria. Once the new query result is available the page is refreshed in accordance. The timeout setting from the main search criteria frame will be used in this search frame as well.

- **Cancel button:** this button permits to cancel all search criteria selected in this new search criteria frame. All options are reset to ‘ALL’ and the database is re-queried based on the new “ALL” selections.

Job summary mockup with embedded search frame hidden

A screenshot of a software interface showing a job summary. At the top, there are several status indicators: 'JOB ID: 745', 'Status: Review in Progress (5/25/2013)', 'Due Date: none', 'Submitted on behalf of: none', 'User ID: UserID@Mysociety.com', and 'Archived: 0'. Below these, a message says 'Totals entries: 10000' and 'Potential matches: 2000'. The main area shows a table of data with columns: Episode N°, AV category, Year of Production, Potential Matches, Estimated Earnings (Unknown currency), Performance Count, and Match accuracy. The table contains several rows of data, each with a small icon next to the episode number.

Job summary mockup with embedded search frame visible

A screenshot of the same software interface as above, but with an embedded search frame visible. The search frame has dropdown menus for 'Affiliate society = All', 'Country of origin = All', and 'Performance Source = All'. It also contains 'OK' and 'Cancel' buttons. The main table of data is identical to the previous screenshot, showing the same columns and rows of information.

3.8.1.3 ***Listing the queried information:***

Once the proper search criteria selected, the user will click the “Search” or “OK” button to query the “**Consolidated input**” data store. The following data is displayed on the page if at least one record matched the selected criterion:

- Entry line selection check box: the user can select or deselect each entry individually by selecting or un-selecting the appropriate check box.
- Match Status ('Matched', 'Confirmed', 'Un-matched' and 'Archived').
- AV work information:
 - Original AV Work Title
 - Original Episode Title
 - Episode Number
 - Category (Film or Series)
 - Year of Production
- Match result information:
 - Total Potential matches: count of all potential matches for the displayed record
 - Total Estimated earnings (unknown currency): sum of all estimated earnings as provided in the original file for the displayed record (Refer to consolidation process.)
 - Total Performance count: sum of all performance counts as provided in the original file for the displayed record (Refer to consolidation process.)
 - The highest match accuracy percentage (if more than one potential match): This is the overall similarity score computed by the matching service.

Sorting the list: the user can sort the list by the following columns:

- Match Status, Original AV Work Title, Original Episode Title, Category (Film or Series), Total Estimated earnings, Total Performance count, and Highest Match accuracy.

3.8.1.4 Action buttons:

When consulting the consolidated input data for the selected job identifier and job sequence ID, the user can select multiple entries from the list (by clicking on the checkbox at the beginning of each line) and proceed with the following actions:

1. **Confirm match:** The submitting society's reviewer can click on the "Confirm match" button to confirm that the potential match established by the matching process is correct. This button is enabled *only if the 'Match Status' of the selected record is equal to "Matched" and the total potential matches counter is equal to 1* (no multiple selection possible here since we are displaying the "Consolidated input" record – to confirm a match with multiple potential matches, the user needs to use the collapse/un-collapse feature to list and select each individual potential match entry). The following data update will occur for the selected record:
 - Learned match table and match statuses data update - please refer to section "**Updating data when a match is confirmed**" process.
 - Adding the confirmed match to the cue sheet request please refer to "**Adding confirmed match to the Cue sheets – 'Basket' data store**" process.
2. **Undo button:** The submitting society's reviewer can click on the "Undo" button to cancel the previous update. This button is enabled only if the 'Match Status' of the selected record is equal to "Confirmed". The following data update will occur:
 - **Step 1: "Consolidated input" data store and "Potential Match Result" data store:**
 - Match Status Indicator field is set to "Matched" for both data stores.
 - **Step 2: Learned match data store:**
 - The unique Input Identifier key + the submitting society code are matched against the "learned match" table.
 - If a record is found and the "**Usage indicator**" is less or equal to 1 then the entry is removed from the learned match table.
 - **Step 3: Requesting the cue sheets – 'Basket' data store:**
 - The batch job ID and job sequence ID and associated item ID for the requesting society code are matched against the Cue sheet request tracking facility data store:

- If a record is found and the request is an open basket then the entry is removed from the basket.
- If a record is found and the request was sent to the supplier (Cue sheet request) then the batch job ID, job sequence ID and job line item for the requesting society code on the Cue Sheet request are set to null. The deletion of the requested item will not occur if the basket/package was sent to the supplier (Cue sheet request) however the links between the request and the match result is removed (nullified). The associated basket ID and basket item ID saved in the “***Original input***” data store will be set to null as well.

3. **View Match Detail:** The submitting society’s user can click on the “View Match Detail” button to view the full detail of the performance information and full detail of each potential match. Only one entry from the list can be selected when activating this feature. Once the button selected, a new page called “Match Detail Review” is activated for the selected entry. The user can navigate to the next record using the “Match Detail Review” page and view the submission content record by record (whereas the current “Match Review” page shows a list of records).

4. **Manual Identification:** The submitting society’s user can click on the “Manual Identification” button to manually search the AVI based on the selected entry or to manually enter and link an AV work to the selected record (user manually identifies the AV work). This button should be enabled only when: only one entry is selected and the selected entry has ***the match status of Un-matched or Matched or Archived***. Once the button selected, a new page called “Manual Identification” is activated for the selected entry.

<input type="checkbox"/> Confirmed	<input type="checkbox"/> SABADO AL MEDIODIA	FEBRUARY 24 1996
<input type="checkbox"/> Matched	<input type="checkbox"/> WIPEOUT	WINTER WIPEOUT A SIGHT FOR SORE
<input type="checkbox"/> Matched	<input type="checkbox"/> NBA INSIDE STUFF	MARCH 02 2002

3.8.1.5 **Collapse – un-collapse feature:**

In order to increase the research efficiency the screen display space will be optimized by minimizing the amount of information initially displayed for each AV work listed in the review page.

The information related to the “Potential matches and performance” can be expanded or re-collapsed as described below with the plus / minus icon. The following information will be available in the collapsed / un-collapse window for each selected line:

JOB ID: 745	
Totals entries: 10000	
Status	AV Title
Confirmed	+ SABADO AL MEDIODIA
Matched	+ NBA INSIDE STUFF
Matched	+ ONE TREE HILL
Matched	+ GUINEVERE JONES
Confirmed	+ CALL 911

Search for section: The “Search for” line highlighted with a different background color will include the following information:

- Plus / minus icon permitting to hide or reveal the detail information related to the performance data (Consolidated Performance section hereafter)
- AV Work Title (“*Consolidated input*” data store)
- Episode Title (“*Consolidated input*” data store)
- Year of production (“*Consolidated input*” data store)
- Country of origin labeled as Origin (“*Consolidated input*” data store)

ONE LIFE TO LIVE Episode: 7712 Year: 1998 Origin: US

Consolidated Performance data section: The “Performance data” section is composed of several elements listed on various lines (visually grouped using a box). The following information is retrieved from the “**Consolidated Input**” data store and available in this section:

- Match status indicator, Episode number, local title, local episode title, internal reference number, submitted AV work number, list of all participants delimited by comma (Actors, directors, production companies **AND** Composer names), affiliated society name, total estimated earning, total performance count, performance source (maybe defaulted to multiples – see consolidation rules), TIS (maybe defaulted to multiples – see consolidation rules), performance dates (Start date + end date) and finally the number of consolidated usage records.

Episode N°:	Local title:	Estimated earnings:	Status: Matched
Reference number:	Local episode title :	Performance Count:	
AV Work N°:	Participants:	Performance Source:	Manual Identification
N° of consolidated usage records: 10 		TIS:	
Affiliated society:		Performance dates:	View Match Detail

- Buttons and icon: the Performance data section includes the “Manual Identification” and “View Match Detail” buttons described in the “Action Button” paragraph above (same functionality and rules). A magnifying glass icon () is available next to the field called “Number of consolidated usage records”. The user can click on this icon to view the original information submitted in the original file be-

fore de-duplication. Once the icon is selected, a new page called “Original submission detail” is activated for the selected entry.

ONE LIFE TO LIVE	Episode: 7712	Year: 1998	Origin: US
Episode N°:	Local title:	Estimated earnings:	Status: Matched
Reference number:	Local episode title :	Performance Count:	
AV Work N°:	Participants:	Performance Source:	Manual Identification
N°of consolidated usage records: 10 		TIS :	
Affiliated society:		Performance dates:	View Match Detail

Potential Matches section: A section title called “List of potential matches” + the total number of potential matches in parentheses is displayed at the top of the “Potential Matches” section. The “potential matches” section is composed of one or many blocks of information describing one or many potential matches. Each block sorted by overall accuracy scores in descending order includes the following information:

Matched AV work section: The “Matched AV work” line highlighted with a different background color includes the following information:

- Entry line selection check box: the user can select or deselect each entry individually by selecting or un-selecting the appropriate check box.
- Matched AV Work Title (“Potential match result” data store).
- Matched AV Work Episode title (if series) - (“Potential match result” data store).
- Matched AV Work Episode Number (if series) - (“Potential match result” data store).
- Matched AV Work Year of production (“Potential match result” data store).
- Matched AV work Country of origin (“Potential match result” data store).
- Match count indicator: Current matched number “of” total number of matches (“Potential match result” data store).

Detail AV work section: The “Detail AV work” section is composed of several elements listed on one line as follows:

- Match accuracy score, match status, matched AV work number with supplying society name in parenthesis and the reason for match (e.g. MR 3.1 – Series title “ONE LIFE TO LIVE” and Episode Title “7712”.

List of potential matches (5 candidates)					
<input type="checkbox"/> ONE LIFE TO LIVE (1995)	Episode: 7712	Episode N:	Year:	Origin: US	(1 of 5)

3.8.2 Match detail review page

The “Match detail review” page is activated from three distinct functional domains:

- The “Job Submission Center” page when the user selects a Job ID and job sequence ID from the list and clicks on the “View Content” button or
- The “Shared unidentified” page when the user selects an entry from the list and clicks on the “View Content” button
- The “Match review” page when the user selects an entry from the list and clicks on the “View Match Detail” button.

When the Match detail review page is activated from the Job Submission Center, all records for the selected Job ID plus Sequence ID are selected and the first record from the list is displayed by default. This logic cannot be applied when this page is activated from the Match Review page because the user has selected not only a Job ID, job sequence ID and several other search criteria but also a specific record from the list. So in this case all records for the selected Job ID and job sequence ID and selected Match Review’ search criteria are selected. The record selected by the user from the previous list is displayed by default. The pagination for this page will be limited to one record per page because the user is reviewing potential matches.

The screenshot shows the CIS-Net Match Detail Review page. At the top, there's a navigation bar with links like HOME, MWI, IPI, CSI, AVI, AGM, ADMIN, DEBUG, FT Web Site, and others. Below the navigation is a search bar with fields for Search AVI, Requester Request Tracking, Supplier Request Tracking, and various filters like Online Search, Job Submission Center, Batch Search, Match Review, Convert non-UPA, Shared Unidentified, and Match detail.

The main content area displays a table for Match 1 of 10000. It includes columns for JOB ID, Status, Due Date, Submitted on behalf of, User ID, and several metrics like Totals entries, Potential matches, Un-matched, Confirmed, and Archived.

Below this is a detailed section for "ONE LIFE TO LIVE" episode 7712, with fields for Episode N°, Local title, Estimated earnings, and other metadata. A "Manual Identification" button is present.

The page then lists "List of potential matches (5 candidates)" for the same job ID. Each entry shows a title, identifier (e.g., 0000000000625713 (ASCAP)), accuracy (e.g., 95% accurate), and a "Confirm match" or "Undo" button. The entries are:

- ONE LIFE TO LIVE (1995)**: Episode title: 7712 (09/03/98), Participants: [empty]
- ONE LIFE TO LIVE (1995)**: Episode title: 7127 (09/03/90), Participants: [empty]
- ONE LIFE TWO LIVES**: G092928383 (PRS), 55% accurate

The “Match Detail Review” page is composed of the following sections:

3.8.2.1 ***Navigation:***

The navigation section composed of the following elements are available at the top and bottom of each page.

Page Title: Match Detail

Next / Previous Page Icon: The buttons are only visible if the displayed results require multiple pages to view all results.

- Clicking on the Next Page icon will query the database and display the next record.
- Clicking on the Previous Page icon will query the database and display the previous record.

Match x of y: This numeric value indicates the current record number and the total number of records to scroll through.

Back button: this is the standard back button that permits the user to leave the current page and return to the previous one (“Job Submission Center” or “Shared unidentified” or “Match Review” pages).

3.8.2.2 ***Job summary frame:***

The job summary section provides information relevant to the selected job ID and job sequence ID, job submission status, date and submitter user ID. This section also includes several metrics by Match Status and reference several submission prefer-

ences as well. This section is available each time this page is activated and will be composed of the lines:

- **Job information line:** same as “Match Review” page
- **Metrics, total indicators line:** same as “Match Review” page

Job summary mockup with embedded search frame visible

JOB ID: 745 Totals entries: 10000	Status: Review in Progress (5/25/2013) Potential matches: 2000	Due Date: none Un-matched: 9000	Submitted on behalf of: none Confirmed: 500	User ID: UserID@Mysociety.com Archived: 0
--------------------------------------	---	------------------------------------	--	--

3.8.2.1 Match Detail information:

Search for section: same as “Match Review” page (Collapse – un-collapse)

ONE LIFE TO LIVE	Episode: 7712	Year: 1998	Origin: US
------------------	---------------	------------	------------

Consolidated Performance data section: same as “Match Review” page (Collapse – un-collapse)

Episode N°: Reference number: AV Work N°: N°of consolidated usage records: 10  Affiliated society:	Local title: Local episode title : Participants:	Estimated earnings: Performance Count: Performance Source: TIS : Performance dates:	Status: Matched
---	--	---	-----------------

- Buttons and icon: the Performance data section **only** includes the “Manual Identification” button described in the “Action Button” paragraph above (same functionality and rules). A magnifying glass icon () is available next to the field called “Number of consolidated usage records”. The user can click on this icon to view the original information submitted in the original file before records consolidation. Once the icon selected, a new page called “Consolidated list” is activated for the selected entry.
-

ONE LIFE TO LIVE	Episode: 7712	Year: 1998	Origin: US
Episode N°: Reference number: AV Work N°: N°of consolidated usage records: 10  Affiliated society:	Local title: Local episode title : Participants:	Estimated earnings: Performance Count: Performance Source: TIS : Performance dates:	Status: Matched

Potential Matches section: A section called “List of potential matches” + the total number of potential matches in parentheses is displayed at the top of the “Potential Matches” section. The “potential matches” section is composed of one or many blocks of information describing one or many potential matches. Each block sorted by overall accuracy scores by descending order includes the following elements:

Matched AV work section: The “Matched AV work” line highlighted with a different background color includes the following information:

- Plus / minus icon permitting to hide or reveal the detail information related to the detail of the matched AV work (Detail AV work section hereafter). By default all details should be hidden.
- Matched AV Work Title
- Matched AV work number and supplying society name in parenthesis.
- Overall accuracy score (in percentage)
- Match count indicator: Current matched number “of” total number of matches.

Detail AV work section: The “Detail AV work” section is composed of several elements listed on various lines as follows:

- Episode title, Episode number, category, country of origin, AV type, year of production, list of all participants delimited by comma (Actors, directors and production companies) and the reason for match (e.g. MR 3.1 – Series title “ONE LIFE TO LIVE” and Episode Title “7712”.

Buttons and hyperlinks:

- Confirm match button (same as above – collapse/un-collapse functional requirement)
- Undo button (same as above)
- AV Title and episode titles hyperlinks: clicking on the title hyperlink will query the only AVI database based on the selected AV work number and display the existing AV work detail.

3.8.3 Manual Identification page

The un-matched metadata provided in the user interface can be reused to automatically pre-populate the existing CIS-Net AVI search criteria fields.

The “Manual identification” page will be accessible from the “Match Review” and “Match Detail Review” pages when the user is reviewing the content of the submitted

file. Once activated, the page will display the following information for the selected Job ID, job Sequence ID and selected Job Line item ID:

The screenshot shows the CIS-Net Manual Identification page for Job ID 745 line item 9872. The top navigation bar includes links for HOME, MWI, IPI, CSI, AVI, ACM, ADMIN, DEBUG, FT Web Site, Requester Request Tracking, Supplier Request Tracking, AVI Contributors, My Society Profile, and Getting Started. Below the navigation is a purple header bar with links for Online Search, Job Submission Center, Batch Search, Match Review, Convert non-UPA, and Shared Unidentified. The main content area displays job details: JOB ID: 745, Status: Review in Progress (5/25/2013), Due Date: none, Submitted on behalf of: none, User ID: UserID@Mysociety.com, Archived: 0. It also shows Totals entries: 10000, Potential matches: 2000, and Un-matched: 9000. A section for 'ONE LIFE TO LIVE' includes Episode: 7712, Year: 1998, and Origin: US. Below this are fields for Episode N°, Local title, Estimated earnings, Reference number, Local episode title, Performance Count, AV Work N°, Participants, Performance Source, Nº of consolidated usage records: 10, TIS, Affiliated society, and Performance dates. There are search boxes for 'Search AVI and link' and 'Non-AVI data entry and link'. At the bottom, there is a note about Requested AV Work for JOB ID 745 line item 9872, which is None.

3.8.3.1 *Navigation:*

The navigation section composed of the following elements will be available at the top and bottom of each page.

Page Title: Manual Identification

Back button: this is the standard back button that permits the user to leave the current page and return to the previous one ("Match Review" or "Match Detail Review" pages).

Job ID + ‘-+ job sequence ID and Line item number: Unique ID of the selected record. This unique ID is used for the "Add to Request" functionality of the Search AVI page and for searching any requested cue sheets in the basket.

3.8.3.2 *Job summary frame:*

The job summary section provides information relevant to the selected job ID, job sequence ID, job submission status, date and submitter user ID. This section also includes several metrics by Match Status and reference several submission preferences as well. This section is available each time this page is activated and will be composed of the lines:

- **Job information line:** same as "Match Review" page
- **Metrics, total indicators line:** same as "Match Review" page

3.8.3.3 *Match Detail information:*

Search for section: same as "Match Review" page (Collapse – un-collapse)

Consolidated Performance data section: same as "Match Review" page (Collapse – un-collapse)

Exception: the “Manual Identification” button should be removed in this context.

ONE LIFE TO LIVE	Episode: 7712	Year: 1998	Origin: US
Episode N°:	Local title:	Estimated earnings:	Status: Matched
Reference number:	Local episode title :	Performance Count:	
AV Work N°:	Participants:	Performance Source:	
N°of consolidated usage records: 10 		TIS:	
Affiliated society:		Performance dates:	

3.8.3.4 Linking AV work to un-matched entry:

Search AVI and link section: This section permits the user to select and pre-populate the existing AVI search criteria and manually identify the sought after AV work. This section includes all the AVI search combinations, input box and buttons of the existing AVI search page. The respective input boxes are automatically populated using the data available in the “Consolidated input” data store. The following population rules by search criteria will be applied:

Search for (criteria)	Input value to use in input box	And for (criteria)	Input value to use in input box
Film title	Input AV Title	Production Number	Null
Series title	Input AV Title	Year of Production	Input Year of production
Episode title	Input Episode title	Country of Origin	Input Country of Origin
Film/series	Input AV Title	Type	Input AV type
Society AVN	Input Work Number	Actor	Input list of actors
Production Number	Null	Director	Input list of Directors
V-ISAN	Input V-ISAN	Production Company	Input list of Production Company
EIDR	Input EIDR	Episode Title	Input Episode title
Episode Sanitized Title	Input Episode title	Episode Number	Input Episode Number
Film/Series Sanitized Title	Input AV Title	Series Identifier	Null
		Episode Year of Production	Input Year of production
		Episode Sanitized Title	Input Episode title

The user can edit any pre-populated input box before querying the AVI. The user can click on the “Reset” button to cancel previous criteria selections and blank any pre-populated input boxes. The user will click on the “Search” button to activate the existing Search AVI page. Once activated, the Search AVI page will reuse the selected search criteria and input boxes value to query the AVI and display the search results.

Search AVI and link:	Search for:	Film Title <input type="button" value="Begins"/> = <input type="text"/>	<input type="button" value="Reset"/>
	And for:	Choose <input type="button" value="Exact"/> = <input type="text"/>	<input type="button" value="Search"/>

Enhancing the Search AVI result page: When activated from the “Manual Identification” page the existing Search AVI result page displays, at the top of each page, the “Performance data section” described above preceded by the label “AV Batch entry”. A new “back” button permits the user to return to the “Manual Identification” page. The existing search result page will be displayed under the label “AVI Search Result.”

Enhancing the “Add to Request” function of the Search AVI result page: When activated from the “Manual Identification” page and **Job Submission Preference is set to “Match & Request Cue Sheets”**, the existing “Add to Request” function of the Search AVI result page performs the following updates when the user identifies the correct AV work for the selected un-matched, matched or archived entry:

“Potential Match result” data store update: A new entry in the “Potential Match result” data store is created with the following information:

- The system references and displays the rule numbers used in establishing the match as follow: **Reason for match:** *Manual identification by + User ID*.
- The selected AV Work number, supplying society code, AV Title and episode title are saved.
- Similarity scores and matching rule confidence score are updated with the highest values.
- Match status is set as “Confirmed”

Other updates requirements:

- Match statuses data update - please refer to section “**Updating data when a match is confirmed**” process
- Adding the confirmed match to the cue sheet request - please refer to “**Adding confirmed match to the Cue sheets – ‘Basket’ data store**” process.

Non-AVI Data Entry and Link section: This section permits the user to manually enter the AV Work information required for the Cue Sheet Request and the linkage between the un-matched entry and the requested AV work cue sheet. All data input options listed hereafter are disable if the logged on user's society name is not an AVI contributing society and if a Cue Sheet request for the selected JOB ID, Job sequence ID and Job line item ID already exists. This section will include the following labels, input boxes and options:

- AV Work Number label and associated input box: the user will enter the AV work number that will be added to the Cue Sheet Request.
- AV Work Title label and associated input box: the user will enter the AV work title that will be added to the Cue Sheet Request.
- Episode Title label and associated input box: the user will enter the episode title that will be added to the Cue Sheet Request.
- Supplying society and associated selection list box: the selection list box will list all AVI contributing societies. The logged on user's society name will be selected by default.
- Category and associated selection list box: the “Film/Series” selection list box will include the following categories: “Series and Film”. If an episode title is keyed in then the category option is automatically updated to Series. Otherwise the default is “Film”.

Non-AVI data entry and link:	AV Work Number:	<input type="text"/>	Supplying society:	SOCAN	Category:	Series
	AV Title:	<input type="text"/>	Episode title:	<input type="text"/>	Add	

The user will click on the “Add” button to activate the update. The Add button will be enabled only if an AV Work number and an AV Work title have been provided. Once the button activated, the following update will take place:

“Potential Match result” data store update: A new entry in the “Potential Match result” data store is created with the following information:

- The system references and displays the rule numbers used in establishing the match as follow: **Reason for match:** *Manual identification by + User ID.*
- The selected AV Work number, supplying society code, AV Title and episode title are saved.
- Similarity scores and matching rule confidence score are updated with the highest values.
- Match status is set as “Confirmed”.

Other updates requirements:

- Match statuses data update - please refer to section “**Updating data when a match is confirmed**” process.
- Adding the confirmed match to the cue sheet request - please refer to “**Adding confirmed match to the Cue sheets – ‘Basket’ data store**” process.

The page is then refreshed to show the updates (Match status changed and Requested cue sheet section below is updated).

3.8.3.5 Requested cue sheet information:

Requested Cue Sheet status for selected JOB ID, Job sequence ID and line item ID: This section acknowledges the user that the selected un-matched or matched entry has been successfully linked to an AV work (manual linkage or via AVI search) by showing the AV work(s) detail information stored in the Cue Sheet Request facility. If no entry for the selected JOB ID and job sequence ID and line item ID is found then the message “none” will be displayed. Otherwise the following information will be shown for ***each line item in the cue sheet request corresponding to the selected JOB ID and job sequence ID and line item ID***:

- Request number, internal reference number, supplying society name, date, Request response status

The following information is listed just once since the same AV work was requested for each internal reference number:

- AV Work Title, AV work number with supplying society name in parenthesis, Episode title, Episode number, category, country of origin, AV type, year of production, list of all participants delimited by comma (Actors, directors and production companies) and the reason for match (e.g. Manual identification).

Requested AV Work for JOB ID 745 line item 98721

Reason for match :	Manual identification			

3.8.4 Original submission listing page

Received files submitted using the UPA standard formats are stored in CIS-Net AVI and identical records prior being matched are consolidated into one entry. The deduplication of the same input record is done to maximize the matching performance and review process. The Original submission listing page will permits the user to view the original data submitted in the UPA file.

The “Original Submission listing” page is accessible from the “Match Review” and “Match Detail Review” pages when the user is reviewing the content of the job. Once activated, the page will display the following information for the selected JOB ID, job sequence ID and selected JOB Line item:

CIS-Net		HOME	MWI	IPI	CSI	AVI	AGM	ADMIN	DEBUG	FT Web Site	
		Search AVI	Requester Request Tracking	Supplier Request Tracking	AVI Contributors	My Society Profile	Getting Started

2311	0			40:00	US		CANAL+	SOAP	

Each line should adopt a different background color.

3.8.5 Automated rematch upon AVI refresh

3.8.5.1 *AVI contribution process enhancement*

New AVI entries submitted by societies as part of their monthly AVIndex contribution will be automatically matched against the outstanding list of unidentified (“**Consolidated input**” data store match status = “un-matched” or “Archived”). The submitter of the original file will be automatically notified if a new match is established.

3.8.5.2 *Automated match and rematch user notification*

The submitting society will receive an email notification once a new match is established. The email notification will be submitted in accordance to the following rules and requirements:

Email To property: The automated notification process will check the User ID stored in the “Job Submission” data store. The user ID is the original file submitter.

Email CC property: The CC property is automatically pre-populated based on the following email addresses selection rules:

- The automated notification process checks the CIS-Net AVI society profile of the requesting society (“CC Email Notification Addresses for Integrated Re-

quest Notification” profile property) and automatically pre-populates the Email CC.

Email Subject property: The subject of the email notification is: New match result available for your review.

Email Body property: The body of the email notification indicates the following information:

Dear Colleague,

Following recent contribution to the AVI by several suppliers, new matches were established for the following submission (“file name sent”).

Submission Details (matched and repeat for each re-matched Job)

Job ID + ‘-‘ + sequence ID, Job status, File name, Submitting society, Submitted on behalf of society, Job date, Last recorded activity date and Owner/User ID

We strongly recommend that you review the match results to request the cue sheets

Regards

CIS-Net AVI.

3.9 Share Unidentified

An expanded list of societies (full list of societies using CIS-Net AVI) is available from the Batch Search > Job Submission Center > Job Status: if you select one job and press the button “Mark it as Complete”. The following screenshot provides you with an illustration of the content of the “Completed” job. Additional functionality allows for AV Batch UP lists to be shared with non-contributing societies.

Closing selected job ID: 139-1		Job Status: Review in progress

Save selection		Reset selection

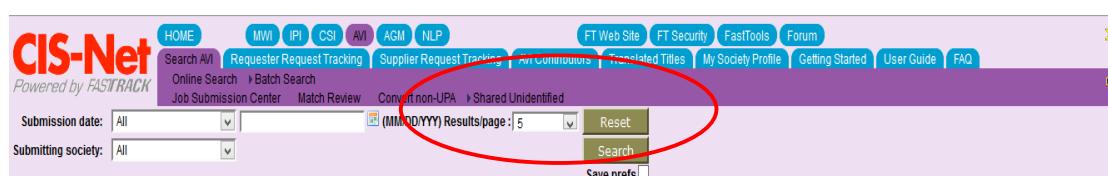

Societies review the metadata available in the common area and generate a UPA format file for internal use. An option permitting the user to extract the information into a CSV format is available as well. The process closes the original unidentified transaction available in the CIS-Net AVI once a society has identified the AV work and provided the cue sheet in response.

Having such a functionality fulfills the following business processes:

- ✓ Non supplier can review un-matched metadata and provide documentation (known as non-supplier requests).
- ✓ Supplier can review and push AV work required by requesting societies but not yet available in the AVI.
- ✓ Royalty income tracking department can review un-matched metadata to detect potential missed revenues.
- ✓ Societies can process the UPA file in their own internal system.
- ✓ Societies can use the list to search for missing cue sheet documentation.
- ✓ All AV unidentified are located in one central area permitting submitters to review and track unidentified lists or unfulfilled research requests.

3.9.1 Accessing the shared unidentified list page

The user accesses the new “Shared unidentified” page by selecting the menu “Search AVI” of the AVI component and the respective sub menus called “Batch Search” and “Shared Unidentified” as per illustration below. The rights to access this new page is based on the society’ Security access rights credentials assigned to the logged in user.

The screenshot shows the CIS-Net search interface. At the top, there's a purple navigation bar with links like HOME, MWI, IPI, CSI, AVI, AGM, NLP, FT Web Site, FT Security, FastTools, Forum, and others. Below the navigation bar, there's a search bar with dropdowns for 'Submission date' (set to 'All') and 'Submitting society' (set to 'All'). To the right of these dropdowns is a dropdown for '(MMDDYYYY) Results/page' set to '5'. Below these fields are three buttons: 'Reset', 'Search', and 'Save prefs'. A red circle highlights the '(MMDDYYYY) Results/page' dropdown and its value '5'.

3.9.2 Shared unidentified list page

Once the submenu option is selected, the user can view a list of AV Batch submissions that have been shared by other societies. *Only submissions that have been shared with the logged on user society code will be displayed (Job Status = Completed & shared and Shared with society code = logged on user society code).*

3.9.2.1 Search criteria frame options:

Selectable submission period: The user can enter a valid date and must comply with the following format date MMDDYYYY (where MM is the two digits reserved for the Month, DD is the two digits reserved for the Day and YYYY is the four digits reserved for the Year.) This input date is matched against the “**Archive Date**” saved in

the “Shared Job” data store. The user can further narrow the selection by selecting a period around the selected submission date as follows:

- After: select all records that where submitted “After” the selected date
- Before: select all records that where submitted “Before” the selected date
- Exact: select all records that where submitted on the selected date only
- All: select all records no matter the selected date

The period options are available to the user in a dropdown box. The submission date can be enter by the user manually using a text box or using a dynamic calendar activated by clicking on the calendar button.

Searching by submitting society: The user can retrieve a list of submissions based on the submitting society by selecting a society name from the selection list. User can select the option “ALL”.

3.9.2.2 ***List the queried information:***

Once the proper search criteria selected, the user can click the “Search” button to query the “Shared Job” data store (Search criterion are: **Job Status = “Completed & shared” AND Share with society code = “logged on user society code” and Archive Date = “Selected submission date” OR “submitting society code” = “Selected Submitting Society Code”**). The following data is displayed on the page if at least one record matched the selected criteria:

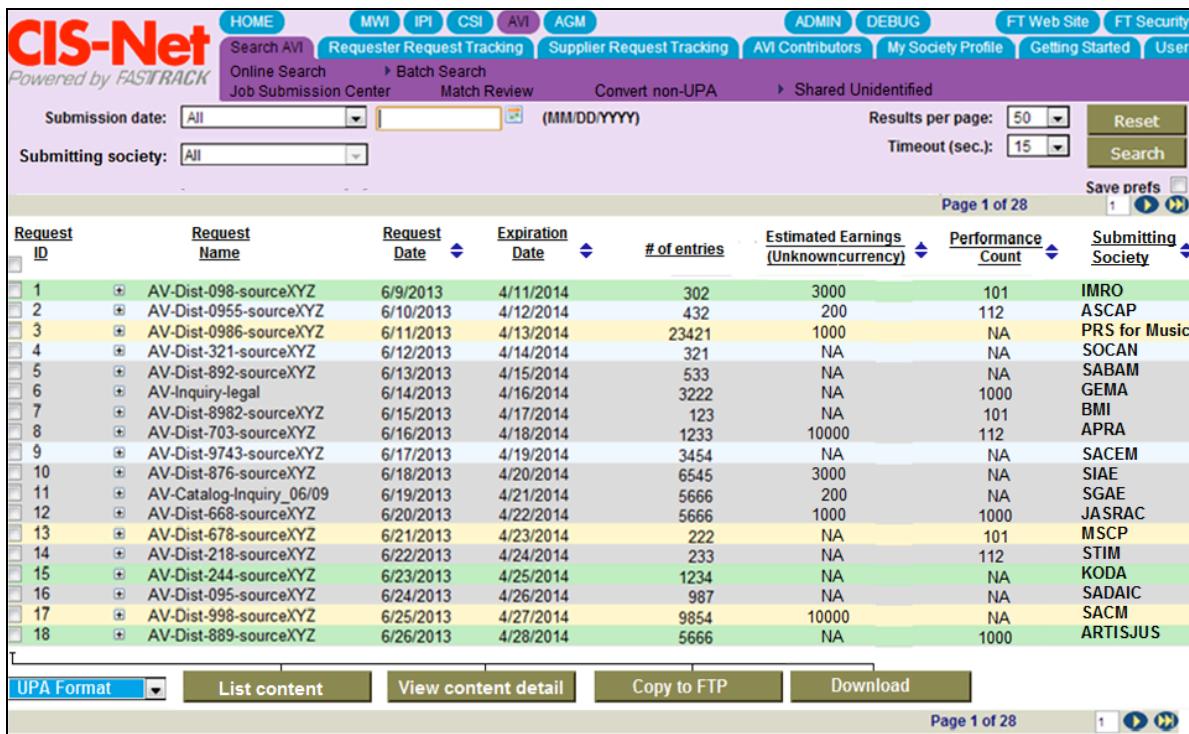

- **Entry line selection check box:** the user can select or deselect each entry individually by selecting or un-selecting the appropriate check box.
- **Export indicator:** an icon that indicates if the listed JOB ID and job sequence ID has been exported or no.
- **Request ID:** the **JOB ID + job sequence ID** assigned by the AV batch upon receiving the file.
- **Request name:** file name as retrieved on the FTP folder or auto-generated by the File Reception process.
- **Request date:** date when the AV Batch process archived the submitted job (archived date).
- **Expiration date:** the existing **“Requesting Due Date”**.
- **Number of entries:** the **Total number of archived records** computed by the archive process.
- **Estimated earnings:** the **Total archived estimated earnings** computed by the archive process.
- **Performance count:** the **Total archived Performance count** computed by the archive process.
- **Submitting society name:** name of the society that originally submitted and shared the file.

Each line adopts a different background color depending on the value of the **export indicator** (e.g. grey yellow background if exported, grey if not).

Sorting the list: the user can sort the list by the following columns:

- Request date
- Submitting society
- Expiration date
- Estimated earnings
- Performance count

Mockup Illustration:

The screenshot shows the CIS-Net Requester Request Tracking page. At the top, there's a navigation bar with links like HOME, MWI, IPI, CSI, AVI, AGM, ADMIN, DEBUG, FT Web Site, and FT Security. Below the navigation is a search bar with fields for Submission date (All), Requester Name, and Request ID, along with dropdowns for Results per page (50) and Timeout (sec.) (15). The main area is a table titled "Requester Request Tracking" with the following columns: Request ID, Request Name, Request Date, Expiration Date, # of entries, Estimated Earnings (Unknown currency), Performance Count, and Submitting Society. The table contains 18 rows of data, each with a checkbox at the beginning. Rows 1, 2, 4, 5, 6, 7, 8, 9, 10, 11, 12, 14, 15, 16, 17, and 18 have green backgrounds, while rows 3 and 13 have yellow backgrounds. At the bottom of the table are buttons for UPA Format, List content, View content detail, Copy to FTP, and Download.

Request ID	Request Name	Request Date	Expiration Date	# of entries	Estimated Earnings (Unknown currency)	Performance Count	Submitting Society
1	AV-Dist-098-sourceXYZ	6/9/2013	4/11/2014	302	3000	101	IMRO

3.9.2.3 Action buttons:

When consulting the list, the user can select multiple entries from the list (by clicking on the checkbox at the beginning of each line□) and proceed with the following actions:

Export format selection list: the user can choose the preferred export format by selecting one of the following options from the Export format selection list: UPA format or CSV format.

1. **Copy to FTP:** After selecting an export format, the user clicks the “Copy to FTP” button to export the archived data for the selected JOB ID(s) and sequence ID to

the user' society dedicated FTP folder (*Batch Request\UPA\FromOtherSocieties*). This button is enabled only when at least one entry is selected from the list.

2. **Download:** After selecting an export format, the user clicks the “Download” button to export the archived data for the selected JOB ID(s) and sequence ID to a temporary file. Once the temporary file(s) is created the transfer mechanism of the operation system will start. The transfer mechanism allows the user to save the temporary file in to his\her device or internal network.
3. **View content:** The user clicks the “View content” (previously named “View content detail”) button to view the full detail of the un-matched performance information. Only one entry from the list can be selected when activating this feature. Once the button selected, a new page called “Match Detail Review” is activated for the selected JOB ID and Sequence ID.
4. **List Content:** The user clicks the “List Content” button to list the content of the un-matched performance information (list view: multiple records per page). Once the button selected, a new page called “Match Review” is activated for the selected JOB ID and Sequence ID.

4 Requestor Request Tracking Facility

The CIS-Net Audio Visual Tracking Facility facilitates the exchange of AV works information among the societies. It is segregated by Requestor and Supplier Request Tracking.

The Requestor Request Tracking facility is accessed by clicking on the labeled tab located at the top of the page. This facility allows users who have packaged requests or requested a Cue Sheet from a Supplier society, to track and print the response status.

The Requestor Request Tracking menu options are ‘Open Basket’, ‘AV Responses,’ ‘AV Request Tracking,’ ‘AV Work Tracking,’ and ‘Statistics’.

4.1 Open Basket Page

This feature enables the user to view all AV works that have been queued in the AV basket using the “Add to Request” function on the AV Search Results page or AV work Details Page. The lists of queued AV works are sorted by user ID and Supplier society code.

Figure 14: Open Basket Page

Owner	Supply Society	Number of Cue Sheets Requested	Request Date
annick@ft.net	BMI	1	2014/09/04

- **Search For:** This dropdown box will list the User IDs whose society code is equal to the user’s id and that have at least one open basket.

Only users from the same society are allowed to share and view their society’s open baskets.

- **Search Button:** Clicking this button will execute the search against the CIS-Net AV Database based on the selected search criteria.

For each Open Basket, the following information is displayed: Owner, Supply Society, Number of cue sheets Requested, and Request Date.

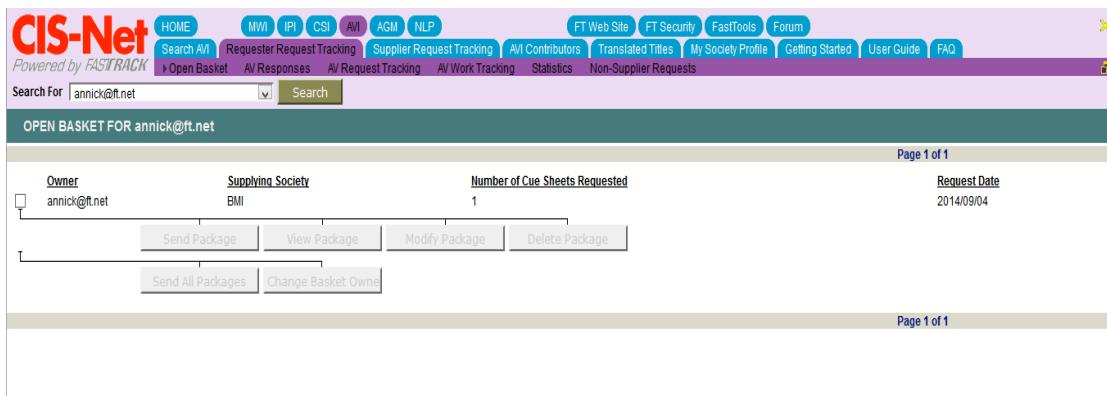

In addition, the Open Baskets page provides a check box next to each Package to select the package for the following Action functions:

- **'Send Package' Button:** clicking this button sends the AV Request package to the Supplying Society.
- **'View Package' Button:** clicking this button opens the View Basket Content page.
- **'Modify Package' Button:** clicking this button opens the Modify Basket page.
- **'Delete Package' Button:** clicking this button opens up a Pop up screen for the user to confirm the deletion of the package. Choosing OK deletes the selected basket. Choosing Cancel, cancels the deletion process.
- **'Send All Packages' Button:** clicking this button allows the user to send several packages at once. In such a case the user will bypass the steps where they are asked to select the IBA and to enter the package comment.
- **'Change Basket Owner' Button:** clicking this button the user to bundle several baskets from several users into one request. When the user clicks on the 'send package' button of the newly created basket the whole AV Request will be submitted and created under the same owner/user ID.

4.1.1 View Basket Content Page

Clicking on the '**View Package**' **Button** from the Open Baskets page opens the View Open Request Basket page.

Figure 15: View Basket Content Page

Owner	Supplying Society	Number of Cue Sheets Requested	Request Date
annick@ft.net	BMI	1	2014/09/04

Page 1 of 1

The following information is provided for the selected basket:

- **Basket Information Line:** includes Requester Society, Number of Cue Sheets Requested, Supplying Society, and Request Date.
- **Basket Content Line:** for each AV work includes Society AV Work number, Film/Series Title, Episode Title, Required by Date, Requester AV Work Number and Comment.
- **'Back' button:** returns user to the Open Baskets page.

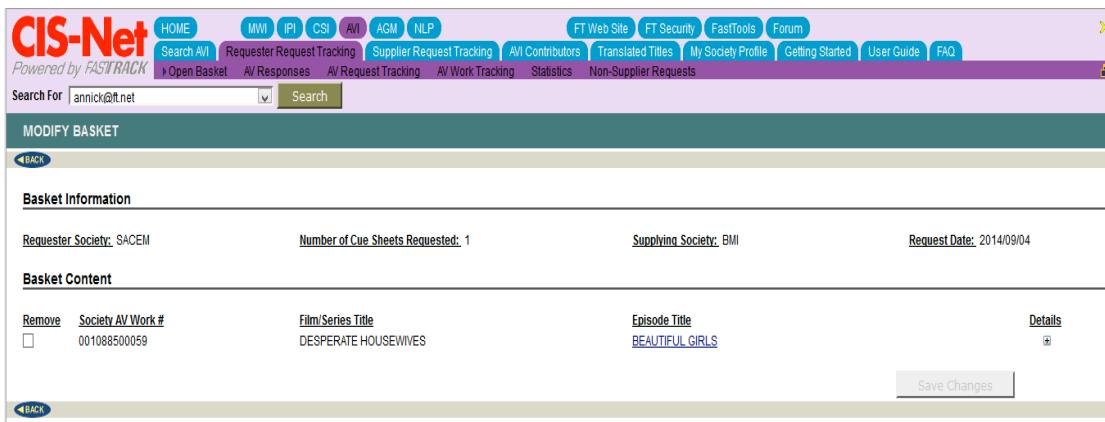

In addition, the View Basket Content page provides the following Action functions for managing baskets:

- **'Send Package' Button:** clicking this button sends the AV Request package to the Supplying Society.
- **'Modify Package' Button** – clicking this button opens the Modify Basket page.

4.1.1 Modify Basket Page

Clicking on the '**Modify Package**' **Button** from the Open Baskets or View Open Baskets page opens the Modify Package page.

Figure 16: Modify Basket Page

The screenshot shows the CIS-Net Modify Basket page. At the top, there's a navigation bar with links like HOME, MWI, IPI, CSI, AVI, AGM, NLP, FT Web Site, FT Security, FastTools, Forum, and others. Below the navigation is a search bar with the placeholder "Search For: annick@ft.net" and a "Search" button. The main content area has a teal header "MODIFY BASKET". Underneath, there's a section titled "Basket Information" with fields for Requester Society (SACEM), Number of Cue Sheets Requested (1), Supplying Society (BMI), and Request Date (2014/09/04). The "Basket Content" section lists one item: "Remove" (checkbox), "Society AV Work #", "Film/Series Title", "Episode Title", and "Details" (plus sign icon). The item listed is "001088500059", "DESPERATE HOUSEWIVES", "BEAUTIFUL GIRLS", and "Details". At the bottom right of this section is a "Save Changes" button.

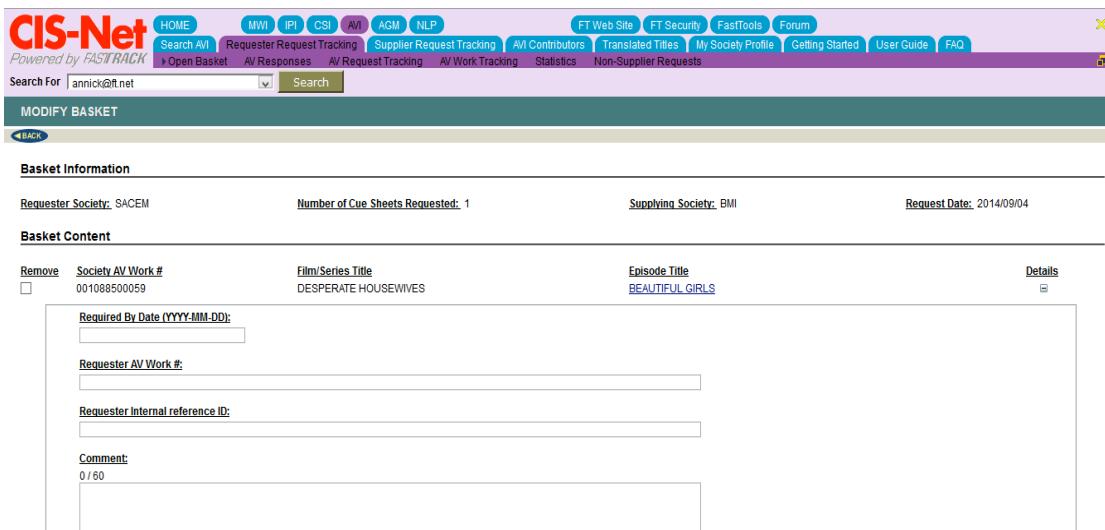

The following information is provided for the selected basket:

- **Basket Information Line:** includes Requester Society, Number of Cue Sheets Requested, Supplying Society, and Request Date.
- **Basket Content Line:** for each AV work includes check box to Remove AV Work, Society AV Work number, Film/Series Title, Episode Title, and Details.
- **'Back' button:** returns user to the Open Baskets page.
- **'Save Changes' Button:** clicking this button removes the selected AV Work from the package.

In addition, the Modify Content page provides the following Action functions for managing baskets:

- **'Details' icon:** clicking the plus sign icon will un-collapse to display the following additional information, on the selected title, available for modification: Required By Date (YYYY-MM-DD), Requester AV Work #, Requester Internal reference ID and Comment.

Figure 17: Details Information Page

This screenshot shows the same CIS-Net Modify Basket page as above, but with the "Details" icon for the first item expanded. The expanded section contains four input fields: "Required By Date (YYYY-MM-DD)" with a date input field, "Requester AV Work #", "Requester Internal reference ID", and "Comment" with a text area for input. The rest of the page remains the same, showing the basket summary and the other item in the list.

- ‘**Save Changes’ Button:** clicking this button applies the modifications made to the detail screen to the AV work request.
- ‘**Back’ button:** returns user to the Open Baskets page.

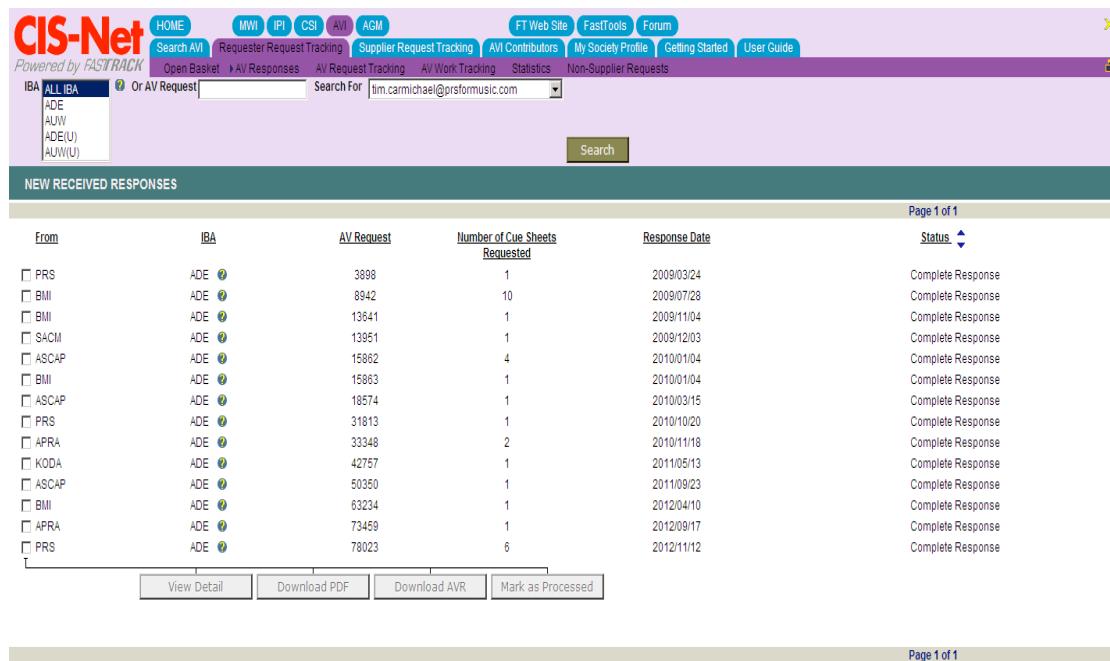

4.2 AV Responses Page⁵

The AV Responses Page allows the user to retrieve, view and print AV responses submitted by a Supplier society.

Each time a new response is received by CIS-Net AVI an email notification is sent to the requesting society. The requesting societies have several ways to retrieve the AV Response depending on their internal processes and preferences:

⁵ See also Tips & Tricks # 21

Figure 18: AV Response Page

The screenshot shows the CIS-Net AVI Response Page. At the top, there's a navigation bar with links for HOME, MWI, IP, CSI, AVI, AGM, FT Web Site, FastTools, Forum, Search AVI, Requester Request Tracking, Supplier Request Tracking, AVI Contributors, My Society Profile, Getting Started, and User Guide. Below the navigation bar, there's a search bar with fields for 'IBA ALL IBA' and 'Or AV Request' followed by a 'Search' button. To the right of the search bar is an email input field: 'Search For: tim.carmichael@prsformusic.com'. The main content area is titled 'NEW RECEIVED RESPONSES' and displays a table of responses. The table has columns: From, IBA, AV Request, Number of Cue Sheets Requested, Response Date, and Status. There are 15 entries listed, all marked as 'Complete Response'. At the bottom of the table are buttons for 'View Detail', 'Download PDF', 'Download AVR', and 'Mark as Processed'. A page footer at the bottom right says 'Page 1 of 1'.

From	IBA	AV Request	Number of Cue Sheets Requested	Response Date	Status

<input type="checkbox"/> PRS	ADE	78023	6	2012/11/12	Complete Response

4.2.1 **Search criteria frame:**

The user will be able to filter the information displayed by searching on IBA or Package ID. If the user does not select any search criteria then all AV Responses corresponding to his/her user society code will be retrieved.

- **IBA Selection:** The ‘Intended Business Activity’ indicator allows the society receiving a Package to accurately route the Package to the appropriate internal business unit for further processing.

The following table represents the ‘Intended Business Activity’ utilized for the AVI tracking facility.

IBA	Code	Definition
AV Production Distribution Error	ADE	Clarification about a possible error in a work/cue within an AV Production for which royalties have been received
Unidentified Works Inquiry	AUW	Question about works/cues within an AV Production for which there is insufficient information to distribute royalties
AV Production Distribution Error (Urgent)	ADE (U)	Clarification about a possible error in a work/cue within an AV Production for which royalties have been received. Urgent Response Required.
Unidentified Works Inquiry (Urgent)	AUW (U)	Question about works/cues within an AV Production for which there is insufficient information to distribute royalties. Urgent Response Required.

Pkge ID (Package ID): This is the same as the AV Request, a unique identifier created by the CIS-Net AVI RTF database for tracking purposes. This is not the number of responded items.

- **Search Button:** Clicking this button will execute the search against the CIS-Net AV Database based on the selected search criteria.

The following information is listed for each basket:

From: Corresponds to the name of the Supplier society that has responded to the AV request.

IBA: Intended business activity. Next to the IBA code, an icon (question mark) will be made available to view the IBA description. Clicking this icon will enable the user to open a tool tip box showing the full description of the IBA codes.

AV Request: This is a unique identifier created by the CIS-Net AVI RTF database for tracking purposes. This is not the number of responded items.

Number of Cue Sheets Requested: This indicator corresponds to the total number of AV work included in the AV Request. This is not the number of responded items.

Response date: This is the date provided by the Supplier society when submitting the response to the Requester society.

Status: This is the status at the AV Request header level indicating if the received response includes all requested items or not. If all items are included in the response then the status will read “Complete Response” otherwise it will read “Partial Response”. An icon showing two triangles facing opposite directions next to each column header label will be used to sort the results.

Status bar message: This message indicates the page number currently being displayed and a short description of the current process “NEW RECEIVED RESPONSES.”

In addition, the AV Response page provides the following Action functions for managing baskets:

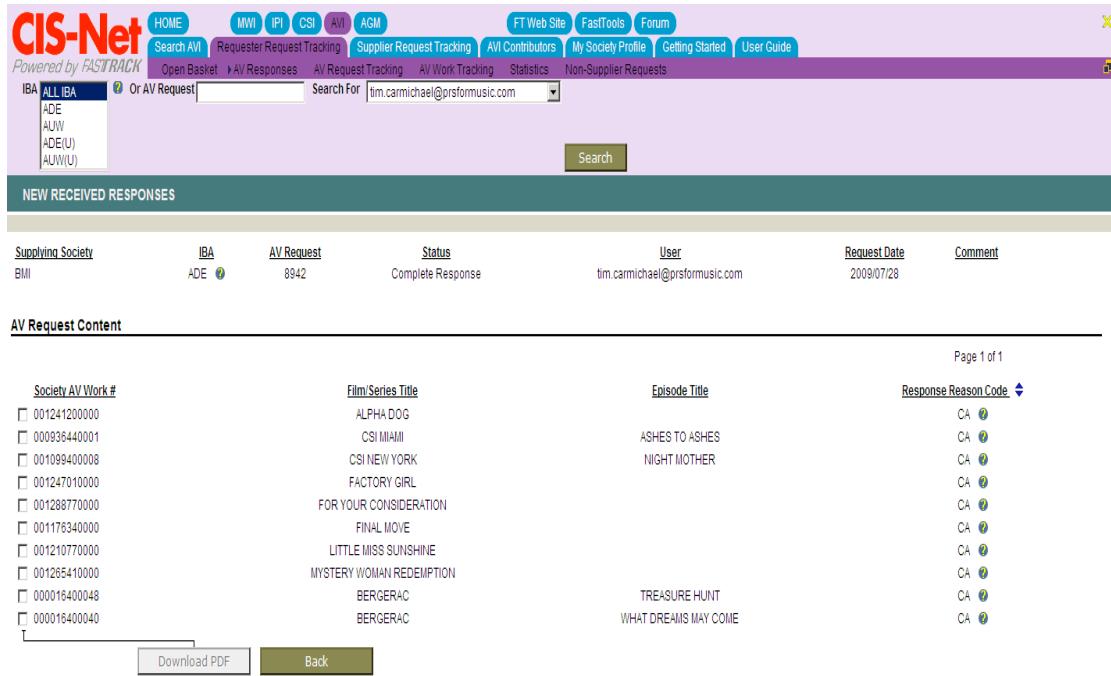

- **‘View Detail’ Button:** clicking this button opens the View Basket Content page.
- **‘Download PDF’ Button:** clicking this button will enable the user to download to their desktop the electronic response file formatted as a PDF file.
- **‘Download AVR’ Button:** clicking this button will enable the user to download the electronic EDI Response file to their desktop.
- **‘Marked as Processed’ Button:** clicking this button, enabled only if the AV response status is equal to “Complete Response,” allows the user to mark the current AV Request as internally processed.

Note: The update will not take place until the user clicks on the Update button.

4.2.2 View Detail Content Page

Clicking on the '**'View Package' Button** from the Open Baskets page opens the View Open Request Basket page.

Figure 19: View Basket Content Page

Supplying Society	IBA	AV Request	Status	User	Request Date	Comment
BMI	ADE	8942	Complete Response	tim.carmichael@prsforsmusic.com	2009/07/28	

AV Request Content

Society AV Work #	Film/Series Title	Episode Title	Response Reason Code
001241200000	ALPHA DOG		CA
000936440001	CSI MIAMI	ASHES TO ASHES	CA
001099400008	CSI NEW YORK	NIGHT MOTHER	CA
001247010000	FACTORY GIRL		CA
001288770000	FOR YOUR CONSIDERATION		CA
001176340000	FINAL MOVE		CA
001210770000	LITTLE MISS SUNSHINE		CA
001265410000	MYSTERY WOMAN REDEMPTION		CA
000016400048	BERGERAC	TREASURE HUNT	CA
000016400040	BERGERAC	WHAT DREAMS MAY COME	CA

Page 1 of 1

[Download PDF](#) [Back](#)

The following information is provided for the selected basket:

- **AV Information Line:** includes Supplying Society, IBA, AV Request, Status, User, Request Date and Comment.
- **AV Request Content Line:** for each AV work includes Society AV Work number, Film/Series Title, Episode Title, and Response Reason Code (as defined below).

Response Reason Code

CA	Available	Cue Sheet Available.
EM	Email	Sent via email.
NA	Not available	No production cue sheet is available.
NI	No interest	Society does not represent this AV work. It may be represented by Reference Society.
NM	No music	There is no music in this production.
PD	Public Domain	There is only public domain music in this production.
PO	Being sent	Sent via Post Office
RP	Replaced	Requested cue sheet was replaced with valid cue sheet for your territory.
WP	Work in Progress	Cue sheet is available but currently being amended or under internal review.

Additional functionality for the Response reason codes are as follows:

- The icon showing two triangles facing opposite directions next to the Response Reason Code line will allow the user to sort the reason codes.
- Clicking on the icon (question mark) will enable the user to view the full description of the Response Reason code.

In addition, the View Detail page provides the following Action functions for managing baskets:

- **'Download PDF' Button:** clicking this button will enable the user to download to their desktop the electronic response file formatted as a PDF file (Please refer to paragraph “4.2.3 Cue Sheet PDF Sample” for screenshot illustration below).

Each cue sheet detail report will correspond to one AV work but since the AV response can include more than one AV work, a page breakdown will be implemented for each new cue sheet detail report. Each new cue sheet detail report will always start on a new page numbered ‘1’.

Since the report will be integrated in the user interface using Acrobat Reader, the user will be able to use the default Acrobat menu option to print the report as illustrated in the following screenshot.

Screenshot of the Acrobat menu that be potentially integrated with the interface when displaying the report

- **'Back' button** – returns user to the AV Responses page.

4.2.3 Cue Sheet PDF Sample

The PDF Cue Sheet generated by CIS-Net AVI will looks like this:

Cue Sheet Report											
Film/Series	Genre			Production Year	Production Number						
ROUGH CUTS						2005

4.3 AV Request Tracking Page

The AV request tracking facility will enable the Requester society's users to query the CIS-Net AVI Tracking database based on AV Request Header information.

Figure 20: AV Request Tracking Page

Search For:

User ID =	Or AV Request =	Packages/page: 10	Reset
IBA =	All		
Supplying Society =	All		
Status =	All		
Date From	To	(YYYYMMDD)	Save prefs <input type="checkbox"/>

Timeout: Standard

Select your search options,
and click the [Search](#) button to obtain the results.

4.3.1 Search Criteria Frame

The Search Criteria frame provides you with the available criteria and options to search and retrieve AV information from the AVI database.

4.3.1.1 ‘Search For’ option

The ‘Search For’ option provides a drop-down list specifying the types of fields (search arguments) that can be used to search for specific AV information. The options provided in the ‘Search For’ field(s) are as follows:

- **User ID:** Email address of the User or **AV Request:** Unique identifier created by the CIS-Net AVI RTF database for tracking purposes.
- **IBA:** Intended business activity
- **Supplying Society:** The Supplying society name list will be populated based on the contributing societies list stored in the security engine.
- **Status:** This is the status at the AV Request header level indicating if the received response includes all requested items or not. If all items are included in the response then the status will read “Complete Response” otherwise it will read “Requested,” “Partial Response,” or “Processed Response.” Full description of the AV Response Status is shown below:

AV Response Status	Status Description
Open	The new AV request is created in the CIS-Net AVI RTF database
Partial Response	Response from supplier was submitted. Some item in the AV request is still open.

Response Complete	The entire AV request is fulfilled and all ARN Codes by item are populated.
Processed Response	The user retrieved the response and marked the AV request as processed. Or the file has been deleted as part of the clean-up process and the status is updated accordingly.

- **Date From To:** The user has the ability to search for information within a defined time range. The dates must be entered (YYYYMMDD)

The user also has the ability to select the following ‘Search For’ and ‘And For’ search combinations:

Search For:	User ID	Package ID (AV Request box)
And For:	IBA	IBA
And For:	Supplier society Name	Supplier society Name
And For:	Request Date	Request Date

4.3.1.2 ‘Packages Per Page’ Option

The Packages per Page option allows you to select the number of packages that should be displayed per page in the Selection frame. The Packages per Page options are available in various increments from 5 to 100 works per page.

4.3.1.3 ‘Time Out (Sec.)’ Option

The Time Out option specifies the amount of time, in terms of seconds, that the search engine should wait to receive responses from the selected database specified in a search. Certain factors such as the complexity of a desired search or occasional communication problems may delay response from certain databases on the network. The Time Out option, therefore, provides you with the flexibility to adjust (decrease or increase) the time out duration according to the specific conditions that may arise. The Time Out options are available in increments of 5 seconds, from 5 to 60 seconds.

4.3.1.4 ‘Reset’ Button

The Reset button returns the content or value of all fields and options within the AV Search Criteria Frame to their original default values as set by the search engine.

4.3.1.5 ‘Search’ Button

The Search Button initiates a search by communicating the specific search criteria provided by you to the various databases selected for searching.

4.3.2 Selection Frame

The Selection frame will provide you with a list of all packages that matched the search criteria.

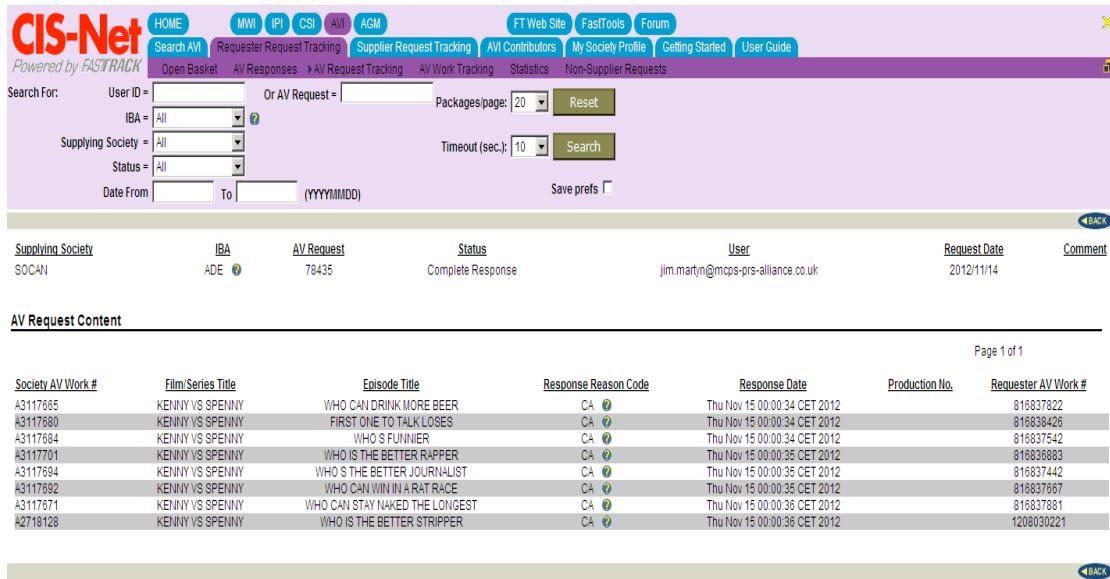

The information available for each package on the Selection frame includes Supplying Society, Intended Business Activity, AV Request (Package ID), Status, User (ID), Request Date and Comment (for the package).

- **Description of the IBA:** Clicking on the icon (question mark) will enable the user to view the full description of the IBA codes.
- **Sorting by ‘Status’:** The user will be able to sort the results by the Status of the Package. An icon showing two triangles facing opposite directions next to the status column header label will be used to perform this sort.

4.3.3 View Detail Page

Choosing a Package, clicking on the radio button located to the far left of each returned package line and clicking on the '**'View Detail' Button**' from the Search Criteria page opens the View Detail page.

Figure 21: View Detail Page

The screenshot shows the CIS-Net View Detail Page. At the top, there's a navigation bar with links like HOME, MWI, IPT, CSI, AVI, AGM, FT Web Site, FastTools, Forum, Search AVI, Requester Request Tracking, Supplier Request Tracking, AVI Contributors, My Society Profile, Getting Started, and User Guide. Below the navigation bar, there are search filters for User ID, IBA, Supplying Society, Status, Date From, Packages per page (set to 20), and a Search button. The main content area displays a table for the selected package:

Supplying Society	IBA	AV Request	Status	User	Request Date	Comment
SOCAN	ADE	78435	Complete Response	jim.martin@mcpo-prs-alliance.co.uk	2012/11/14	

Below this, the 'AV Request Content' section shows a table of AV works included in the package:

Society AV Work #	Film/Series Title	Episode Title	Response Reason Code	Response Date	Production No.	Requester AV Work #
A311765	KENNY VS SPENNY	WHO CAN DRINK MORE BEER	CA 7	Thu Nov 15 00:00:34 CET 2012	816837822

The following information is provided for the package selected:

- **Package Information Line:** The information listed at the top of the View Detail Page is the header information for the AV Request Package: Supplying Society, IBA, AV Request, Status, User, Request Date and Package Comment.
- **AV Request Content Line:** the AV Request Content Line displays information for each AV work included in the Package. Information includes Society AV Work number, Film/Series Title, Episode Title, Response Reason Code, Response Date, Production Number and Requester AV Work #.
- **'Back' button:** returns user to the Search Selection page.

4.3.4 Export Results

- **'Download CSV' button:** allows the user to export the pages results to a 'csv' file.

Please note that the above screenshot has been taken from the test environment and may include more menu options that are visible to the general user.

4.4 AV Work Tracking Page

The AV work tracking facility enables the Requester society's users to query any submitted AV request independently from the response status code (Processed, Par-

tial Response, Complete Response or Open). This option will enable the users to query the CIS-Net AVI RTF database based on AV work level information.

Figure 23: AV Work Tracking Page

Select your search options,
and click the **Search** button to obtain the results.

4.4.1.1 ‘Search For’ options

The ‘Search For’ option provides a drop-down list specifying the types of fields (search arguments) that can be used to search for specific AV information. The options provided in the ‘Search For’ field(s) are as follows:

- **Film/Series Title:** Searches the selected databases for all AV film and series titles that match the entered search criteria. Select ‘Begin’, ‘Exact’ or ‘Contains’ from the drop-down list.
- **Episode Title:** Searches the selected databases for AV episodes that match the entered search criteria.
- **Society AV Number:** Searches for the Supplying Society’s AV Number for the cue sheet requested.
- **Production Number:** Searches the selected databases by the production company’s identifying AV production number.
- **Supplying Society:** The Supplying society name list will be populated based on the contributing societies list stored in the security engine.
- **Response Reason Code:** The reason codes are described below:

CA	Available	Cue Sheet Available.
EM	Email	Sent via email.
NA	Not available	No production cue sheet is available.
NI	No interest	Society does not represent this AV work. It may be represent-

	ed by Reference Society.
NM	No music
PD	Public Domain
PO	Being sent
RP	Replaced
WP	Work in Progress
	There is no music in this production.
	There is only public domain music in this production.
	Sent via Post Office
	Requested cue sheet was replaced with valid cue sheet for your territory.
	Cue sheet is available but currently being amended or under internal review.

- **Date From To:** The user has the ability to search for information within a defined time range. The dates must be entered (YYYYMMDD)

4.4.1.2 Exact/Begins/Contains Drop-Down List

When Series, Film, Episode Title is the search criteria selected, 'Exact', 'Begins' or 'Contains' can be selected from the drop-down list.

- **Exact:** Searches the selected databases for the AV Title(s) that *exactly* matches the entered search criteria.
- **Begins:** Default setting. Searches the selected databases for the AV Title(s), which match the order of the words in the entered search criteria. The 'Begins' search is based on a full word search and does not perform partial word searches.
- **Contains:** Searches the selected databases for the AV Title(s) that include the words in the entered search criteria in any order.

4.4.1.3 'And For' Option

The 'And For' provides supplemental search criteria options. When used in combination with the 'Search For' criteria options; the 'And For' search criteria provide a more focused and specific search. Availability and use of the 'And For' criteria options are dependent on the specific 'Search For' criteria option selected. The only 'And For' combination available in the AV Work Tracking Search is:

Search For:	Film/Series Title Episode Title Society AVN Production Number	
And For:	Production Number	This option is only available with Film/Series Title
And For:	Requester society Name	This is the list of all CISAC society names.
And For:	Response Reason Code	
And For:	Date Range	

4.4.1.4 ‘Packages Per Page’ Option

The Packages per Page option allows you to select the number of packages that should be displayed per page in the Selection frame. The Packages per Page options are available in various increments from 5 to 100 works per page.

4.4.1.5 ‘Time Out (Sec.)’ Option

The Time Out option specifies the amount of time, in terms of seconds, that the search engine should wait to receive responses from the selected database specified in a search. Certain factors such as the complexity of a desired search or occasional communication problems may delay response from certain databases on the network. The Time Out option, therefore, provides you with the flexibility to adjust (decrease or increase) the time out duration according to the specific conditions that may arise. The Time Out options are available in increments of 5 seconds, from 5 to 60 seconds.

4.4.1.6 ‘Reset’ Button

The Reset button returns the content or value of all fields and options within the AV Search Criteria Frame to their original default values as set by the search engine.

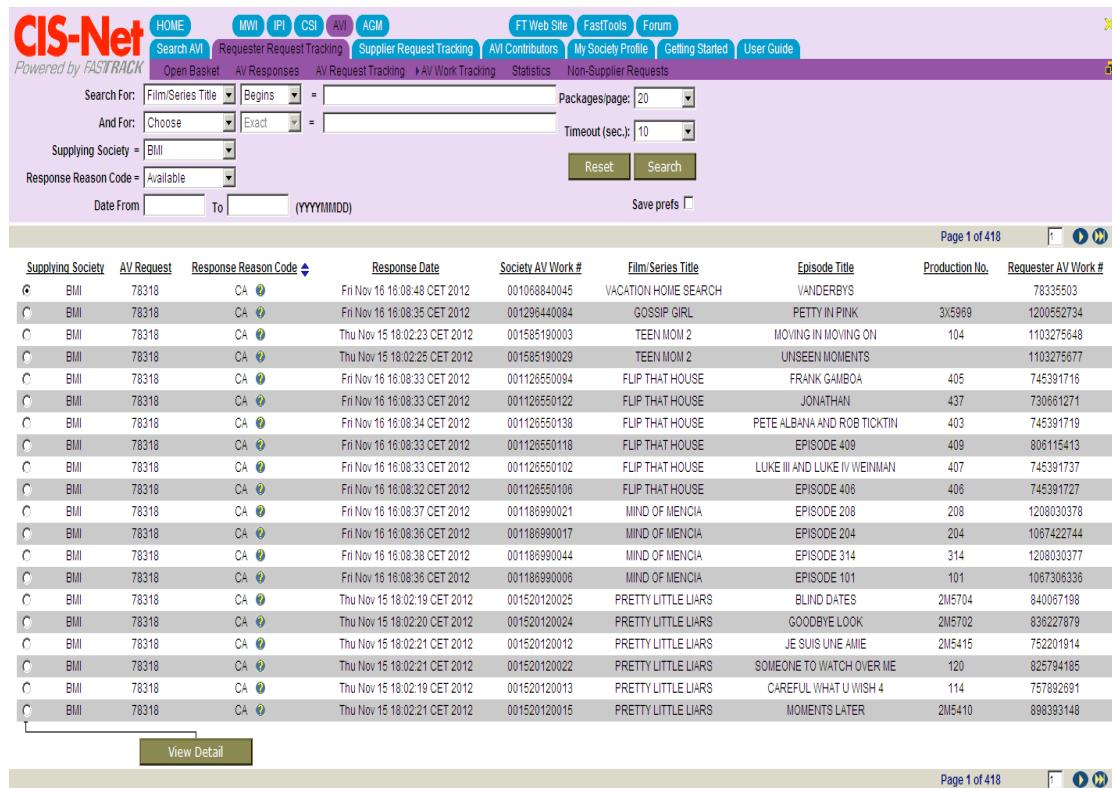

4.4.1.7 ‘Search’ Button

The Search Button initiates a search by communicating the specific search criteria provided by you to the various databases selected for searching.

4.4.2 Selection Frame

The Selection frame will provide you with a list of all packages that matched the search criteria.

The information available for each package on the Selection frame includes, when applicable, Supplying Society, AV Request (Package ID tracking number), Response Reason Code, Response Date, Society AV Work Number, Film/Series Title, Episode Title, Production Number and Requester AV Work Number.

- **Description of the Response Reason Code:** Clicking on the icon (question mark) will enable the user to view the full description of the selected Response Reason code.
- **Sorting by 'Response Reason Code':** The user will be able to sort the results by the Response Reason Code of the Package. An icon showing two triangles facing opposite directions next to the status column header label will be used to perform this sort.

4.4.3 View Detail Page

Choosing a Package, clicking on the radio button located to the far left of each returned package line and clicking on the '**'View Detail' Button**' from the Search Criteria page opens the View Detail page.

Figure 25: View Detail Page

The screenshot shows the CIS-Net View Detail Page. At the top, there is a search form with fields for 'Search For:' (Film/Series Title), 'And For:' (Choose), 'Supplying Society' (BMI), 'Response Reason Code' (Available), and date range ('Date From' and 'To'). Below the search form, the results are displayed in a table:

Supplying Society	IBA	AV Request	Status	User	Request Date	Comment
BMI	ADE	77880	Complete Response	leonie.biggenden@mcpss-alliance.co.uk	2012/11/07	

Below this, the 'AV Request Content' section displays two rows of data:

Society AV Work #	Film/Series Title	Episode Title	Response Reason Code	Response Date	Production No.	Requester AV Work #
001627860009	LAB RATS	SMART AND SMARTER	CA	Wed Nov 07 14:05:36 CET 2012	110	
001627860011	LAB RATS	CAN I BORROW THE HELICOPTER	CA	Wed Nov 07 14:05:35 CET 2012	112	

The following information is provided for the package selected:

- **Package Information Line:** the information listed at the top of the View Detail Page is the header information for the AV Request Package: Supplying Society, IBA, AV Request, Status, User, Request Date and Package Comment.
- **AV Request Content Line:** the AV Request Content Line displays information for each AV work included in the Package. Information includes Society AV Work Number, Film/Series Title, Episode Title, Response Reason Code, Response Date, Production Number and Requester AV Work Number.
- **'Back' button:** returns user to the Search Selection page.

4.5 Statistics Page

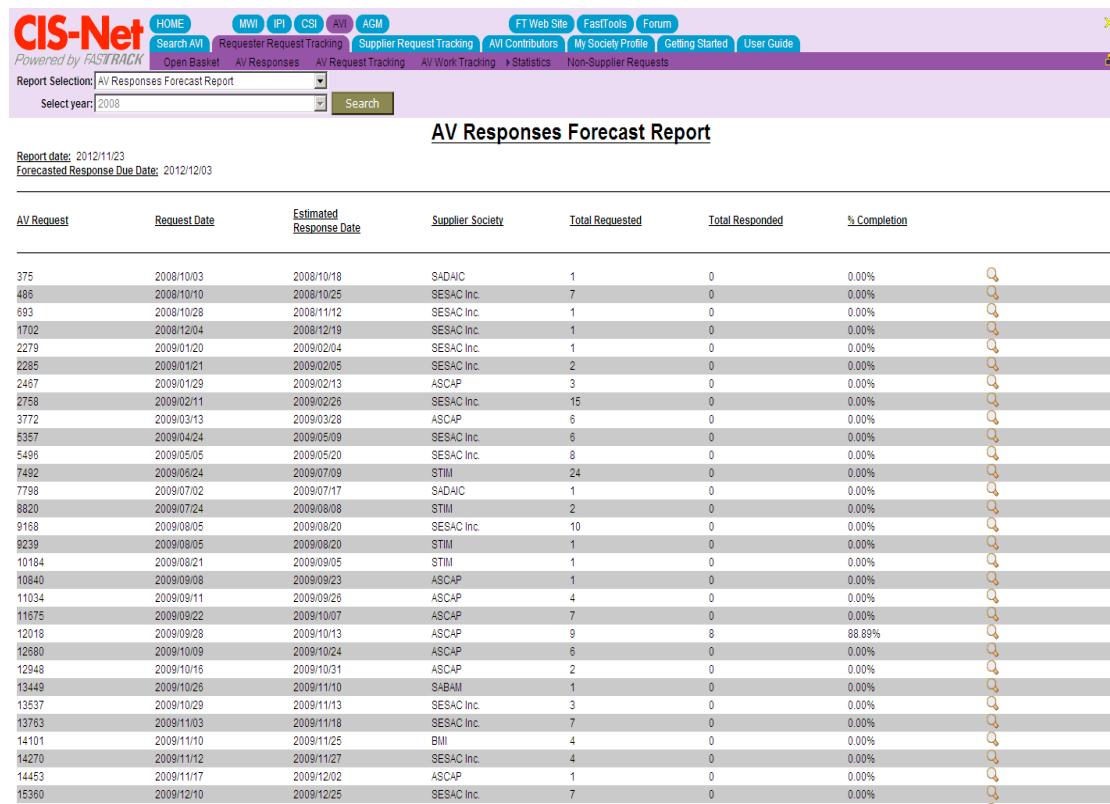

The Statistics Selection screen is activated each time the user selects the "Statistics" tab of the Requester Request Tracking Facility menu. This feature enables the Requester society to view, print and download electronic reports based on the AV Requests and Responses exchanges in the CIS-Net RTF database.

The Requester society can select three different reports from the drop down box and initiate the report by clicking the 'Search' button. Each report is described in the next section.

4.5.1 AV Responses Forecast Report

The AV Responses Forecast Report enables the Requester society to check all past due requested responses and anticipate future incoming responses based on a Requester society threshold.

Figure 26: AV Responses Forecast Report

The screenshot shows the CIS-Net interface for the AV Responses Forecast Report. The top navigation bar includes links for HOME, MWI, IPI, CSI, AVI, ACM, FT Web Site, FastTools, Forum, Search AVI, Requester Request Tracking, Supplier Request Tracking, AVI Contributors, My Society Profile, Getting Started, and User Guide. Below the navigation is a purple header bar with 'Powered by FASTTRACK' and dropdown menus for 'Report Selection' (set to 'AV Responses Forecast Report') and 'Select year' (set to '2008'). A 'Search' button is also present. The main content area is titled 'AV Responses Forecast Report'. It displays a table with the following columns: AV Request, Request Date, Estimated Response Date, Supplier Society, Total Requested, Total Responded, and % Completion. The table lists numerous entries, each with a magnifying glass icon at the end of the completion column.

AV Request	Request Date	Estimated Response Date	Supplier Society	Total Requested	Total Responded	% Completion
375	2008/10/03	2008/10/18	SADAIC	1	0	0.00%

13449	2009/10/26	2009/11/10	SABAM	1	0	0.00%
13537	2009/10/29	2009/11/13	SESAC Inc.	3	0	0.00%
13783	2009/11/03	2009/11/18	SESAC Inc.	7	0	0.00%
14101	2009/11/10	2009/11/25	BMI	4	0	0.00%
14270	2009/11/12	2009/11/27	SESAC Inc.	4	0	0.00%
14453	2009/11/17	2009/12/02	ASCAP	1	0	0.00%
15360	2009/12/10	2009/12/25	SESAC Inc.	7	0	0.00%

The report lists all AV Requests that have at least one open item where the Estimated Response Date is past due. Each AV Request listed in this report will be sorted by Estimated Response Date then by Supplier society. The report will be composed of two sections: 1) A Header section and 2) A Detail section.

- **Header section:** includes Report Date, Report Title and Forecasted Response Due Date.
- **Detail section** (one line for each selected AV Request): includes AV Request, Request Date, Estimated Response Date, Supplying Society, Total Requested, Total Responded Items and % (Percentage) of completion.

Additionally when clicking on the magnifying glass at the right side of the statistics page provides a list of the non-delivered cue sheets from a particular AV Request package.

The application will use the following calculations:

Estimated Response Date = AV Request Date + Number of Days to respond to Request (value stored in society profile)

Society Threshold = Unique number between 0 and 75. The unit is days. This value will be retrieved from the society profile.

Forecasted Response Due Date = Report Date + Requester Society Threshold (Value stored in the society profile)

Open Request Forecast = (AV Request Response Status = Open or Partial Response) and (Estimated Response Date < Forecasted Response Due Date)

4.5.2 Automatic Sending of the Pending Request Reminder Email Notification to the suppliers

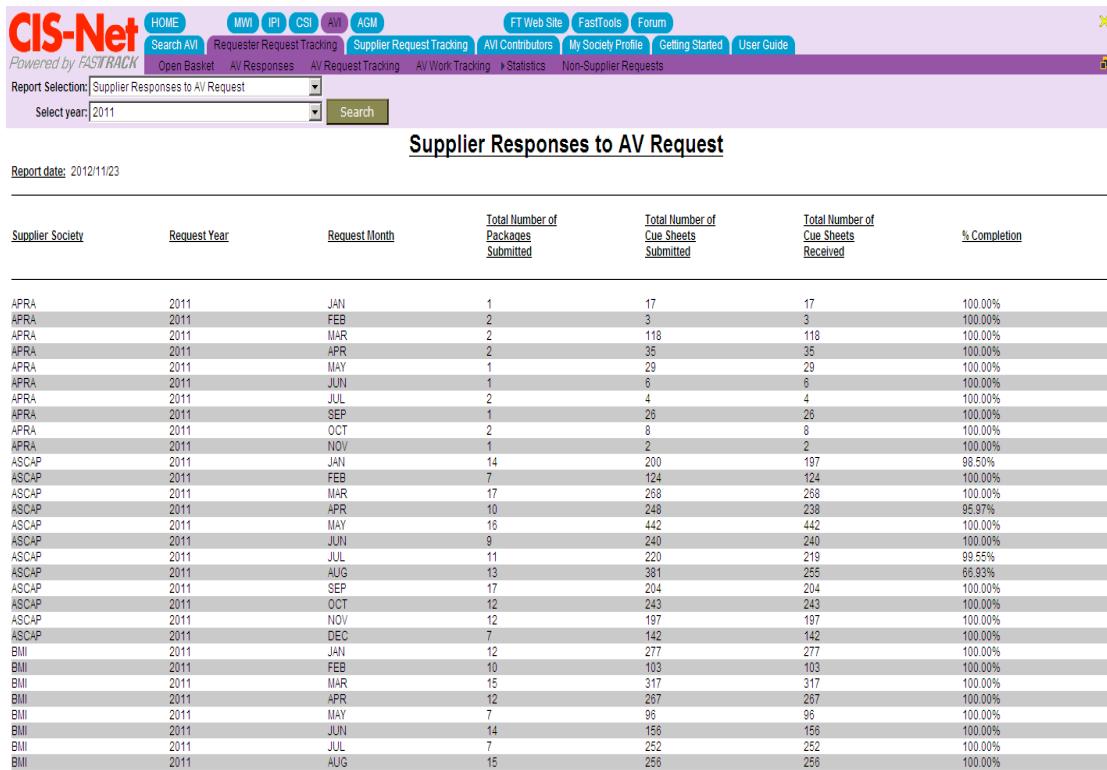

This email notification is intended to remind the Supplier societies when an AV Request is still pending after the estimated response due date. This email notification facilitates the following CIS-Net AVI Response Business Rule in the Request Tracking Process:

- **AVI Business Rule:** Supplying societies will endeavor to respond within eight weeks or as sufficient to meet the deadline stated by the requesting society. If unable to complete in that time they should notify the Requester why and when it will be possible to do so. This should be done at six weeks.

4.5.3 Supplier Responses to AV Request Report

This Supplier Responses to AV Request Report enables the Requester society to gather AV Request/Response statistics by Supplier society: Report Selection and Select Year. The report will calculate and display cumulative information for the following performance key indicators: Total Number of Packages Submitted, Total Number of Cue Sheets Submitted, Total Number of Cue Sheets Received and the % (Percentage) of Completion.

Figure 27: Supplier Responses to AV Request Report

The report will be composed of two sections: 1) A Header section and 2) A Detail section.

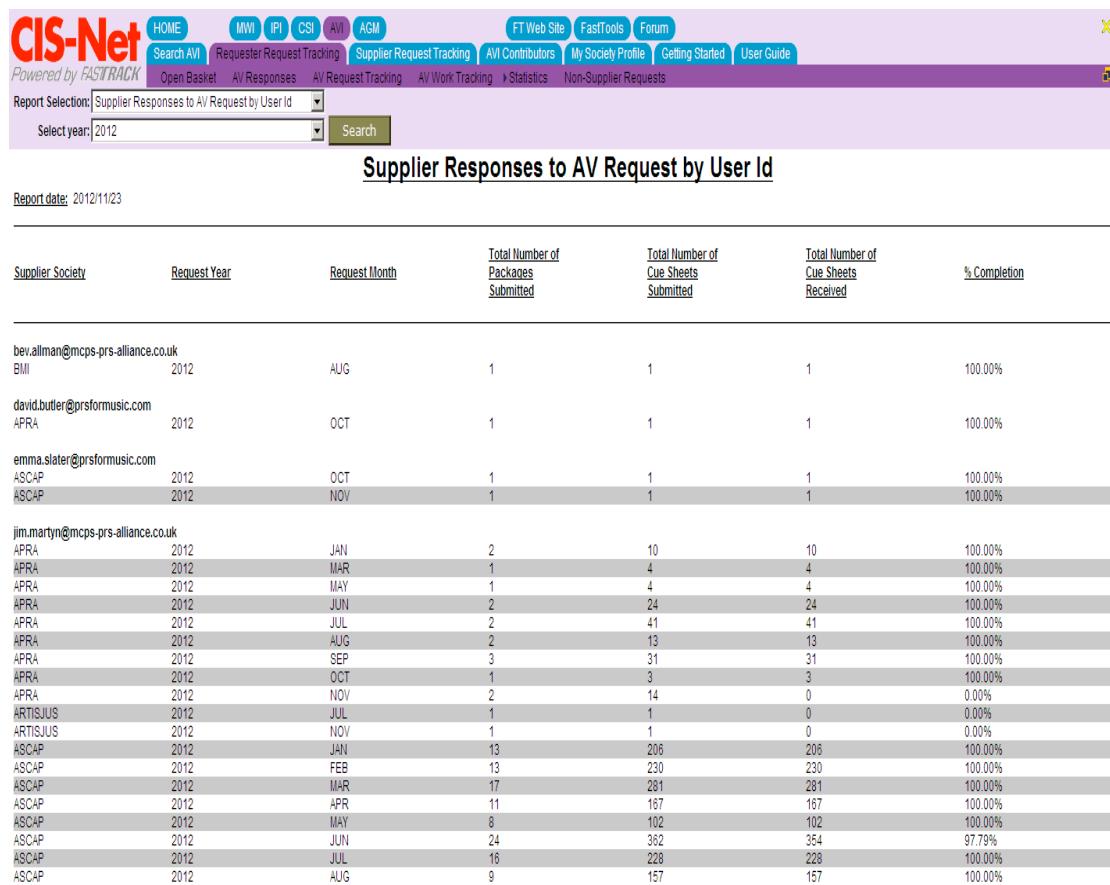

- **Header section:** includes Report Date and Report Title.
- **Detail section** (one line for each Supplier, Month and Year totals): includes Supplier Society Name, Request Year, Request Month, Total Number of Packages Submitted, Total Number of Cue Sheets Submitted, Total Number of Cue Sheets Received and % (Percentage) of Completion.

Grouping and sorting will be by Supplier Society Name, Request Year and Request Month.

4.5.4 Supplier Responses to AV Request by User ID Report

The Supplier Responses to AV Request by User ID Report enables the requester society to gather AV Request/Response statistics by user, Supplier society, Year and Month.

Figure 28: Supplier Responses to AV by User ID Report

The screenshot shows the CIS-Net interface with a purple header bar containing various links like HOME, MWI, IPI, CSI, AVI, AGM, FT Web Site, FastTools, Forum, and several tracking links. Below the header is a navigation menu with options like Open Basket, AVI Responses, AVI Request Tracking, AVI Contributors, My Society Profile, Getting Started, and User Guide. A dropdown menu for 'Report Selection' is open, showing 'Supplier Responses to AV Request by User Id' as the selected option. Another dropdown for 'Select year' shows '2012'. A 'Search' button is visible. The main content area has a title 'Supplier Responses to AV Request by User Id' and a subtitle 'Report date: 2012/11/23'. The data is presented in a table with the following columns: Supplier Society, Request Year, Request Month, Total Number of Packages Submitted, Total Number of Cue Sheets Submitted, Total Number of Cue Sheets Received, and % Completion. The table lists data for various users and societies across different months in 2012, with completion percentages ranging from 0.00% to 100.00%.

Supplier Society	Request Year	Request Month	Total Number of Packages Submitted	Total Number of Cue Sheets Submitted	Total Number of Cue Sheets Received	% Completion

ASCAP	2012	JUL	16	228	228	100.00%
ASCAP	2012	AUG	9	157	157	100.00%

The report calculates and displays cumulative information for the following performance key indicators: Total Number of Packages Submitted, Total Number of Cue Sheets Submitted, Total Number of Cue Sheets Received and the % (Percentage) of Completion for Each Total.

The report will be composed of two sections: 1) A Header section and 2) A Detail section.

- **Header section:** includes Report Date and Report Title.
- **Detail section:** grouped by User ID for the following information: Supplier Society, Request Year, Request Month, Total Number of Packages Submit-

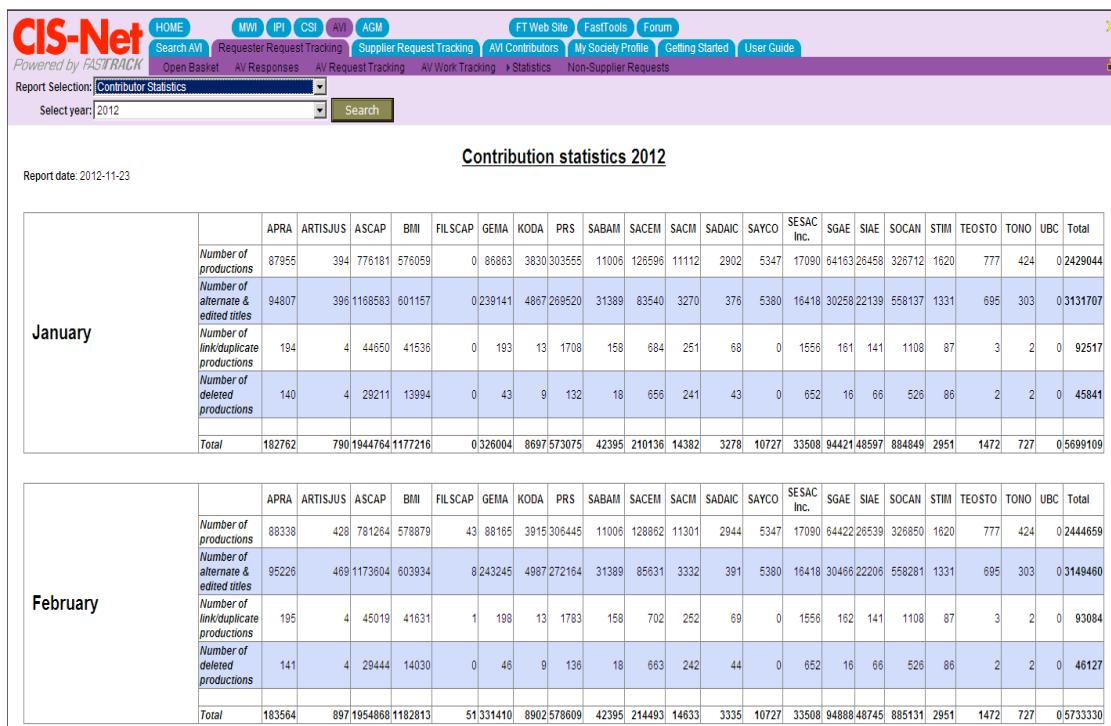

ted, Total Number of Cue Sheets Submitted, Total Number of Cue Sheets Received and % (Percentage) of Completion.

Grouping and sorting will be by User ID, Supplying Society Name, Request Year and Request Month.

4.5.5 Contributor Statistics

The following report lists the number of records supplied by contributing societies by Year and Month.

Figure 29: Contributor Statistics Report

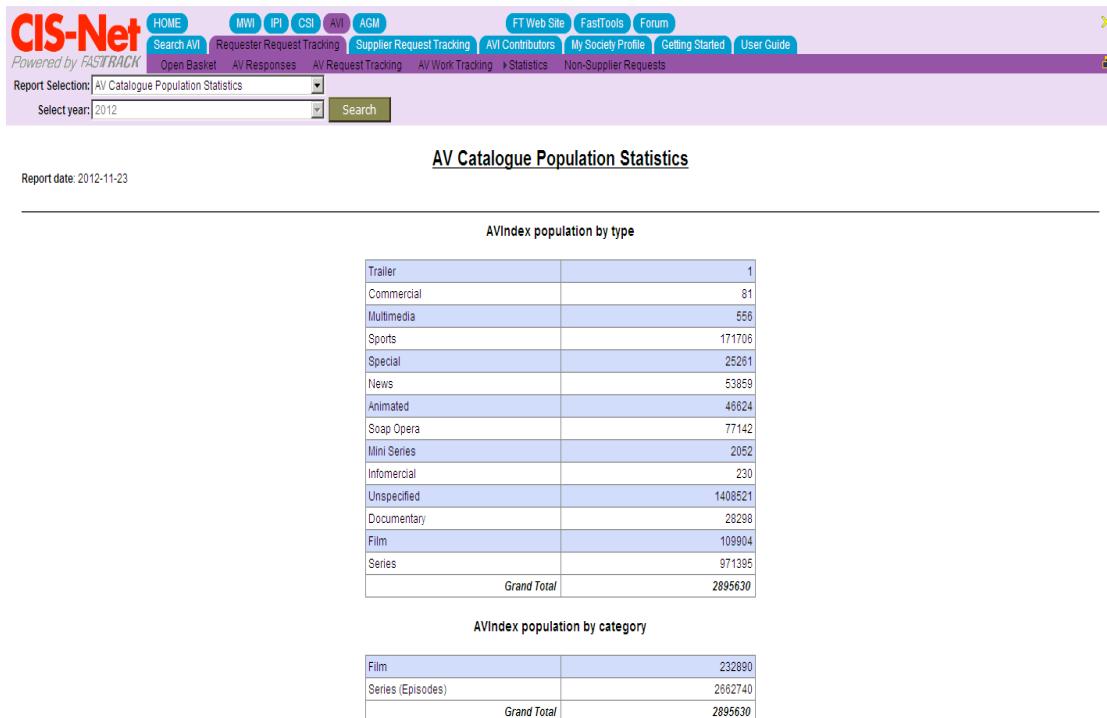

The screenshot shows the CIS-Net Contributor Statistics Report interface. At the top, there's a navigation bar with links like HOME, MWI, IFPI, CSL, AVI, ACM, FT Web Site, FastTools, Forum, and User Guide. Below the navigation bar, there's a search bar and a dropdown menu for 'Report Selection' set to 'Contributor Statistics'. A date selector shows 'Select year: 2012' and a 'Search' button. The main content area displays two tables, one for January 2012 and one for February 2012, showing various statistics for different societies.

<i>Grand Total</i>	2895630

Two new tabs are available from CIS-Net AVI 4.6 onwards:

4.5.7 Top Requested Cue Sheets

Lists the most requested cue sheets.

4.5.8 Number of queries

Lists the numbers of online queries.

4.6 Non-Supplier Requests Page

This feature allows displaying non-supplier Audio-visual works by Requester Society code, user ID and status. Non-supplier requests that have not been submitted to the supplier must have the ‘basket’ status. This feature will be superseded by the AV Batch Services section found later in this manual.

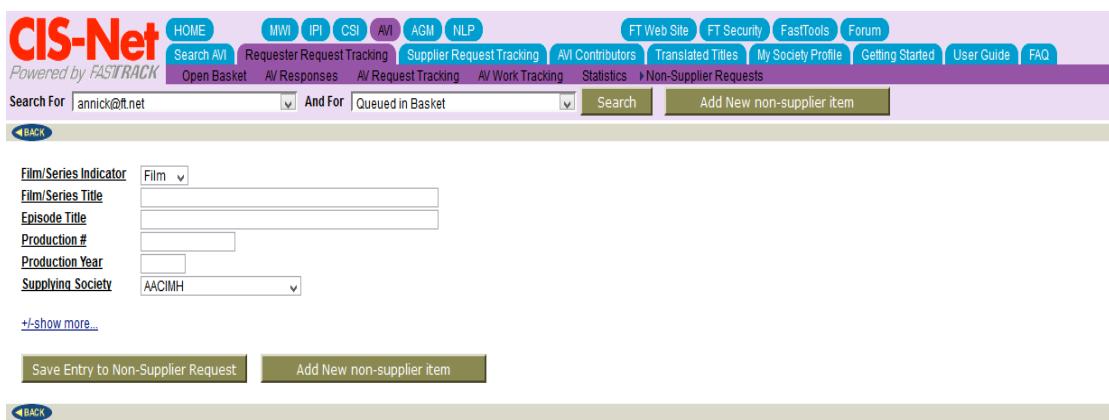

The search allows a combined search using the ‘And for’ (Queued in basket/Requested to Supplier) criteria.

The search results provide a list of available requests available. When selecting a request with the checkbox the following buttons and features are available:

- Create Request and submit selected basket to intended supplier society
- Modify Request
- Delete Request

- View Request: Displays the content of the non-supplier AV Request. Header information is displayed and the content gives a list of non-supplier AV works with details (click on +/- to expand/collapse details)
- Download UPA allow submitting to the selected supplier.

Figure 31: Non-Supplier Requests

Once the update is successfully completed, the screen will be refreshed with a successful message. The same entry will be submitted to the newly selected Supplier.

Please note that after having filled out the form if you do not select “Save Entry to Non-Supplier Request” and either select another window or “Add New Non-Supplier Item”, the information filled out on the form will not be saved and there is a pop-up window informing this entry will be lost if it is not saved first.

5 Supplier Request Tracking

The CIS-Net Audio Visual Tracking Facility facilitates the exchange of AV works information among the societies. It is segregated by Requestor and Supplier Request Tracking.

The Supplier Request Tracking facility is accessed by clicking on the labeled tab located at the top of the page. This facility is for users that have received Cue Sheet requests from a Requester society. This option enables the Supplier societies users to track AV Requests, AV Responses and print/submit responses.

The Supplier Request Tracking menu options are 'AV Requests', 'AV Request Tracking,' 'AV Work Tracking,' and 'Statistics'.

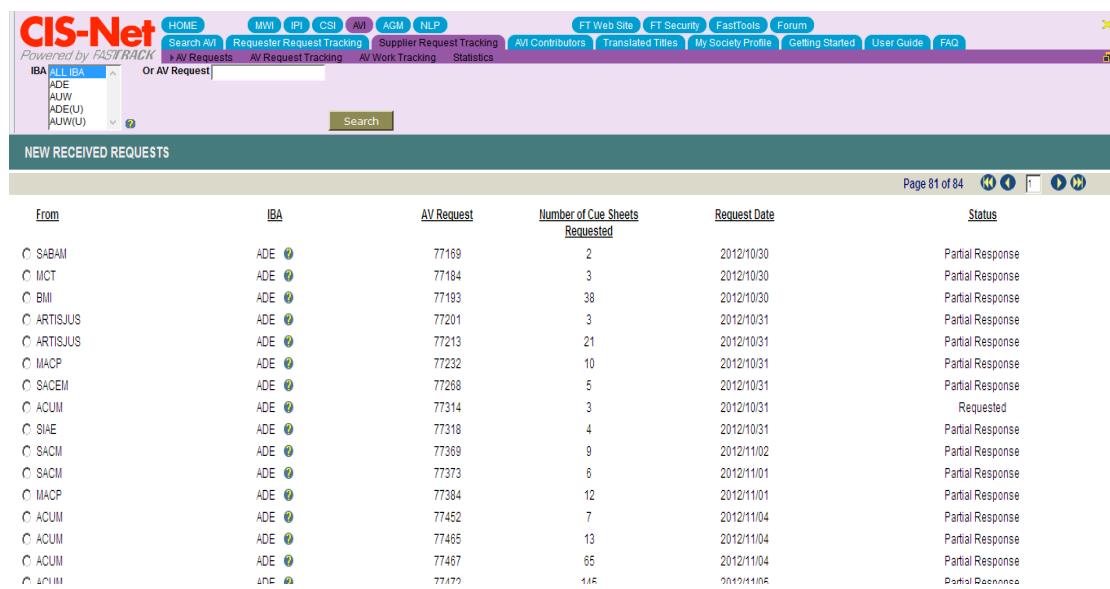

Note: As a reminder both options will be available to the user only if the Society Administrator has granted the required privileges in the security user profile.

5.1 AV Requests (Supplier Role)

This feature enables the user to retrieve, view and print AV Request submitted by a Requester society.

Each time a new request is received and forwarded to the supplier an email notification “[New Request Notification](#)” (Section 5.2.4) is sent to the supplier. The supplier societies have several ways to retrieve the AV Requests depending on their internal processes and preferences:

Figure 32: AV Requests Tracking Page

The screenshot shows the CIS-Net interface with the following details:

- Header:** CIS-Net, Powered by FASTTRACK, with links for HOME, MM, IPI, CSI, AVI, AGM, NLP, FT Web Site, FT Security, FastTools, Forum, AV Contributors, Translated Titles, My Society Profile, Getting Started, User Guide, and FAQ.
- Search Bar:** Includes fields for Search AVI, Requester Request Tracking, Supplier Request Tracking, AVI Contributors, Translated Titles, My Society Profile, Getting Started, User Guide, and FAQ.
- Left Sidebar:** Shows a dropdown menu for IBA (Intended Business Activity) with options: IBA, ADE, AUW, ADE(U), and AUW(U). Below it is a search bar with placeholder text "Or AV Request" and a "Search" button.
- Section Header:** NEW RECEIVED REQUESTS
- Data Table:** A grid showing the following columns: From, IBA, AV Request, Number of Cue Sheets Requested, Request Date, and Status. The data is as follows:

From	IBA	AV Request	Number of Cue Sheets Requested	Request Date	Status
SABAM	ADE	77169	2	2012/10/30	Partial Response
MCT	ADE	77184	3	2012/10/30	Partial Response
BILL	ADE	77193	38	2012/10/30	Partial Response
ARTISJUS	ADE	77201	3	2012/10/31	Partial Response
ARTISJUS	ADE	77213	21	2012/10/31	Partial Response
MACP	ADE	77232	10	2012/10/31	Partial Response
SACEM	ADE	77268	5	2012/10/31	Partial Response
ACUM	ADE	77314	3	2012/10/31	Requested
SIAE	ADE	77318	4	2012/10/31	Partial Response
SACM	ADE	77369	9	2012/11/02	Partial Response
SACM	ADE	77373	6	2012/11/01	Partial Response
MACP	ADE	77384	12	2012/11/01	Partial Response
ACUM	ADE	77452	7	2012/11/04	Partial Response
ACUM	ADE	77465	13	2012/11/04	Partial Response
ACUM	ADE	77467	65	2012/11/04	Partial Response
ACUM	ADE	77479	145	2012/11/05	Partial Response

5.1.1 **Search criteria frame**

The user will be able to filter the information displayed by searching on IBA or Package ID. If the user does not select any search criteria then all AV Responses corresponding to his/her user society code will be retrieved.

Reminder: the database query will also check for logged on user society code = AV Request Supplier society Code and where response status of the entire AV request is equal to “Partial Response” or “Open”.

- **IBA Selection:** The ‘Intended Business Activity’ indicator allows the society receiving a Package to accurately route the Package to the appropriate internal business unit for further processing.

The following table represents the ‘Intended Business Activity’ utilized for the AVI tracking facility.

IBA	Code	Definition

AV Production Distribution Error	ADE	Clarification about a possible error in a work/cue within an AV Production for which royalties have been received
Unidentified Works Inquiry	AUW	Question about works/cues within an AV Production for which there is insufficient information to distribute royalties
AV Production Distribution Error (Urgent)	ADE (U)	Clarification about a possible error in a work/cue within an AV Production for which royalties have been received. Urgent Response Required.
Unidentified Works Inquiry (Urgent)	AUW (U)	Question about works/cues within an AV Production for which there is insufficient information to distribute royalties. Urgent Response Required.

Pkge ID (Package ID): This is the same as the AV Request, a unique identifier created by the CIS-Net AVI RTF database for tracking purposes. This is not the number of responded items.

- **Search Button:** Clicking this button will execute the search against the CIS-Net AV Database based on the selected search criteria.

The following information is listed for each new received request:

From: Corresponds to the name of the Requester society that has requested and submitted the AV request.

IBA: Intended business activity. Next to the IBA code, an icon (question mark) will be made available to view the IBA description. Clicking this icon will enable the user to open a tool tip box showing the full description of the IBA codes.

AV Request (Package ID): This is a unique identifier created by the CIS-Net AVI RTF database for tracking purposes.

Number of Cue Sheets Requested: This indicator corresponds to the total number of AV works included in the AV Request. This is not the number of responded items.

Request date: This is the date provided by the Requester society when submitting the request to the Supplier society.

Status (Response): This is the status at the AV Request header level indicating if the request was partially fulfilled or not at all. If at least one item in the request was responded then the response status will read “Partial Response” otherwise it will read “Open”.

Status bar message: This message indicates the page number currently being displayed and a short description of the current process “NEW RECEIVED REQUESTS”.

In addition, the AV Requests page provides the following Action functions for managing packages:

- **‘View Detail’ Button** – clicking this button opens the View New Received Requests page.

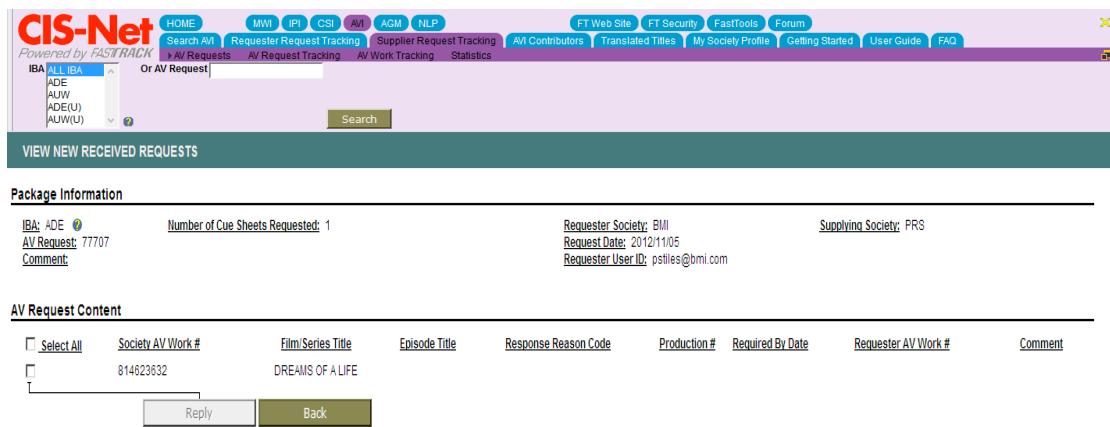

- ‘**Download PDF**’ **Button** – clicking this button will enable the user to download to their desktop the electronic response file formatted as a PDF file.
- ‘**Download AIR**’ **Button** – clicking this button will enable the user to download the electronic EDI Request file to their desktop.

5.1.2 View New Received Requests Page

Choosing a Package, by clicking on the radio button located to the far left of each returned package line, then clicking on the '**View Detail**' Button opens the View New Received Requests page.

The View New Received Request page allows the Supplier society to view the detail of the AV request but most importantly allows the user to respond manually (response status) to the entire request or to a selected item.

Figure 33: View New Received Requests Page

Package Information

IBA: ADE	Number of Cue Sheets Requested: 1	Requester Society: BMI	Supplying Society: PRS
AV Request: 77707		Request Date: 2012/11/05	
Comment:		Requester User ID: pstiles@bmi.com	

AV Request Content

Select All	Society AV Work #	Film/Series Title	Episode Title	Response Reason Code	Production #	Required By Date	Requester AV Work #	Comment
<input type="checkbox"/>	814623632	DREAMS OF A LIFE						

[Reply](#) [Back](#)

This following information is displayed for the selected New Received Requests:

Package Information: includes the IBA, Number of Cue Sheets Requested, Requester Society, Supplying Society, AV Request (Package ID tracking number), Request Date, Requester User ID and Comment (for the Package Information).

AV Request Content: list each requested AV work with the following information: Society AV work Number, Film/Series Title, Episode Title, Response Reason Code, Production Number, Required by Date, Requester AV Work Number and Comment (for the AV Work requested).

When the Response Reason Code is blank the 'Reply' button is available. Otherwise the actual Response reason code is displayed.

In addition, the AV Requests page provides the following Action functions for managing packages:

'Select' Button: Clicking the buttons to the left of each AV Request listed allow the user to select one or more of the AV Work to 'Reply' with a Response Reason Code.

'Select All' Button: Clicking this button selects all the AV Requests listed for the user to 'Reply' with a Response Reason Code.

'Reply' Button: Clicking this button will display an 'Item Reply' pop up box which list the possible Response Reason Codes available for reply. The possible choices are: Post Office, Not Available, No Interest, No Music or Public Domain.

- Once the user selects the Response Reason Code, the 'Validate' button will validate the selection and update the AV Request(s).
- The 'Close' button will close the 'Item Reply' pop up box.

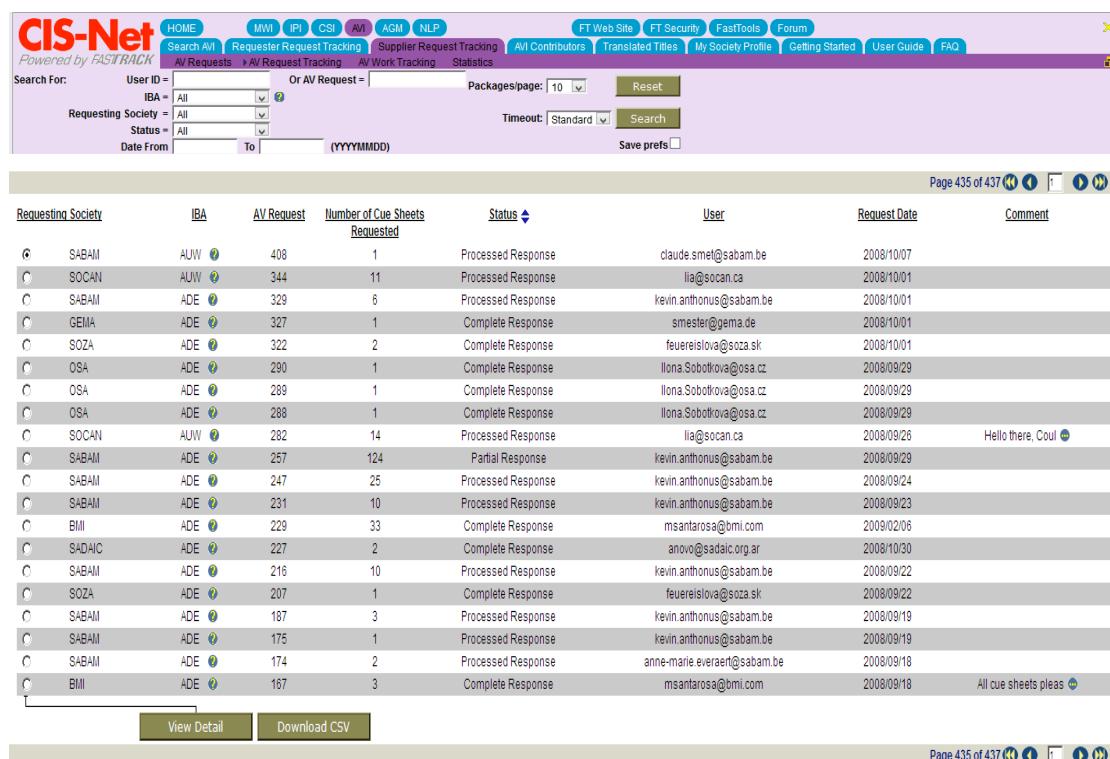

'Back' Button: Clicking this button will return the user to the New Received Requests Page.

Navigation Button: The users will have at least two icons allowing them to move to the next page or back to the previous page. This is required when the AV requests displayed are parsed out on several pages.

5.2 AV Request Tracking (Supplier Role)

The AV request tracking facility will enable the Supplier society's users to query any submitted AV request independently from the response status code (Processed, Partial Response, Complete Response or Open). This option will enable the users to query the CIS-Net AVI RTF database based on AV Request Header information as per the search criteria.

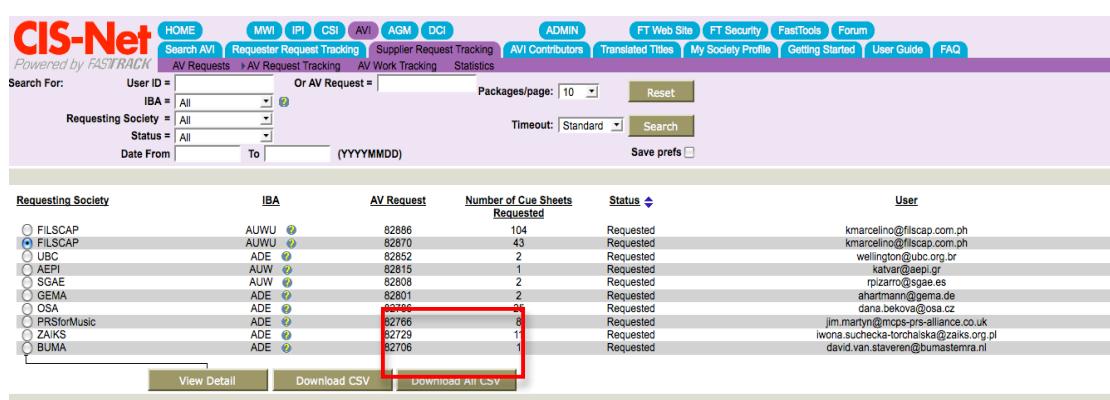

Figure 34: AV Request Tracking Page

The screenshot shows the CIS-Net AV Request Tracking page. The search criteria are set to 'User ID = All', 'IBA = All', 'Requesting Society = All', and 'Status = All'. The results table lists 24 entries, each with details like Requesting Society, IBA, AV Request, Number of Cue Sheets Requested, Status, User, Request Date, and Comment. The 'Comment' column for the first entry contains the text 'Hello there, Coul 😊'. At the bottom, there are 'View Detail', 'Download CSV', and 'Download All CSV' buttons.

When results fit onto more than one page you have the ability to export on your desktop all cue sheet requests at once through 'Download all CSV' button. This applies to both Requestors and Suppliers.

The screenshot shows the CIS-Net AV Request Tracking page. The search criteria are set to 'User ID = All', 'IBA = All', 'Requesting Society = All', and 'Status = All'. The results table lists 14 entries, each with details like Requesting Society, IBA, AV Request, Number of Cue Sheets Requested, Status, and User. The 'Status' column for the last two entries (IBA ADE, AV Requests 62766 and 62729) is highlighted with a red box. At the bottom, there are 'View Detail', 'Download CSV', and 'Download All CSV' buttons, with 'Download All CSV' being the one highlighted.

Please note that the above screenshot has been taken from the test environment and may include more menu options that are visible to the general user.

5.2.1 Search Criteria Frame

The Search Criteria frame provides you with the available criteria and options to search and retrieve AV information from the AVI database.

5.2.1.1 ‘Search For’ option

The ‘Search For’ option provides a drop-down list specifying the types of fields (search arguments) that can be used to search for specific AV information. The options provided in the ‘Search For’ field(s) are as follows:

- **User ID:** Email address of the User or **AV Request:** Unique identifier created by the CIS-Net AVI RTF database for tracking purposes.
- **IBA:** Intended business activity
- **Requesting Society:** The Requesting society name list will be populated based on the society list stored in the security engine.

Note: The Requester society name list will include all known CISAC societies. This is not the list of societies contributing to the CIS AVIndex.

- **Status:** This is the status at the AV Request header level indicating if the received response includes all requested items or not. If all items are included in the response then the status will read “Complete Response” otherwise it will read “Requested,” “Partial Response,” or “Processed Response.” Full description of the AV Response Status is shown below:

AV Response Status	Status Description
Open	The new AV request is created in the CIS-Net AVI RTF database
Partial Response	Response from supplier was submitted. Some item in the AV request is still open.
Response Complete	The entire AV request is fulfilled and all ARN Codes by item are populated.
Processed Response	The user retrieved the response and marked the AV request as processed. Or the file has been deleted as part of the clean-up process and the status is updated accordingly.

- **Date From To:** The user has the ability to search for information within a defined time range. The dates must be entered (YYYYMMDD)

The user also has the ability to select the following ‘Search For’ and ‘And For’ search combinations:

Search For:	User ID	AV Request
And For:	IBA	IBA
And For:	Requesting Society	Requesting society
And For:	Status	Status

5.2.1.2 ‘Packages Per Page’ Option

The Packages per Page option allows you to select the number of packages that should be displayed per page in the Selection frame. The Packages per Page options are available in various increments from 5 to 100 works per page.

5.2.1.3 ‘Time Out (Sec.)’ Option

The Time Out option specifies the amount of time, in terms of seconds, that the search engine should wait to receive responses from the selected database specified in a search. Certain factors such as the complexity of a desired search or occasional communication problems may delay response from certain databases on the network. The Time Out option, therefore, provides you with the flexibility to adjust (decrease or increase) the time out duration according to the specific conditions that may arise. The Time Out options are available in increments of 5 seconds, from 5 to 60 seconds.

5.2.1.4 ‘Reset’ Button

The Reset button returns the content or value of all fields and options within the AV Search Criteria Frame to their original default values as set by the search engine.

5.2.1.5 ‘Search’ Button

The Search Button initiates a search by communicating the specific search criteria provided by you to the various databases selected for searching.

5.2.2 Selection Frame

The Selection frame will provide you with a list of all packages that matched the search criteria.

The information available for each package on the Selection frame includes Supplying Society, IBA, AV Request (Package ID tracking number), Number of Cue Sheets Requested, Status, User (ID), Request Date and Comment (for the package). In addition, the AV Requests page provides the following Action functions for managing packages:

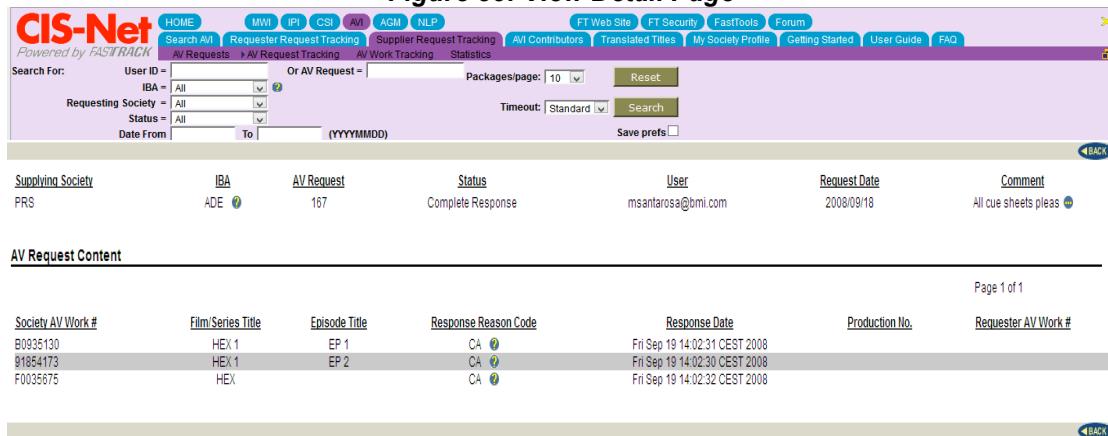

'Select' Button: Clicking the buttons to the left of each AV Request listed allow the user to select one or more of the AV Work to 'Reply' with a Response Reason Code.

- **Description of the IBA:** Clicking on the icon (question mark) will enable the user to view the full description of the selected IBA code.
- **Sorting by 'Status':** The user will be able to sort the results by the Status of the Package. An icon showing two triangles facing opposite directions next to the status column header label will be used to perform this sort.

5.2.3 View Detail Page

Choosing a Package, clicking on the radio button located to the far left of each returned package line and clicking on the '**'View Detail' Button**' from the Search Criteria page opens the View Detail page.

Figure 35: View Detail Page

Supplying Society	IBA	AV Request	Status	User	Request Date	Comment
PRS	ADE	167	Complete Response	msantarosa@bmi.com	2008/09/18	All cue sheets please

Society AV Work #	Film/Series Title	Episode Title	Response Reason Code	Response Date	Production No.	Requester AV Work #
B0935130	HEX 1	EP 1	CA	Fri Sep 19 14:02:31 CEST 2008		
B1854173	HEX 1	EP 2	CA	Fri Sep 19 14:02:30 CEST 2008		
F0035675	HEX	CA		Fri Sep 19 14:02:32 CEST 2008		

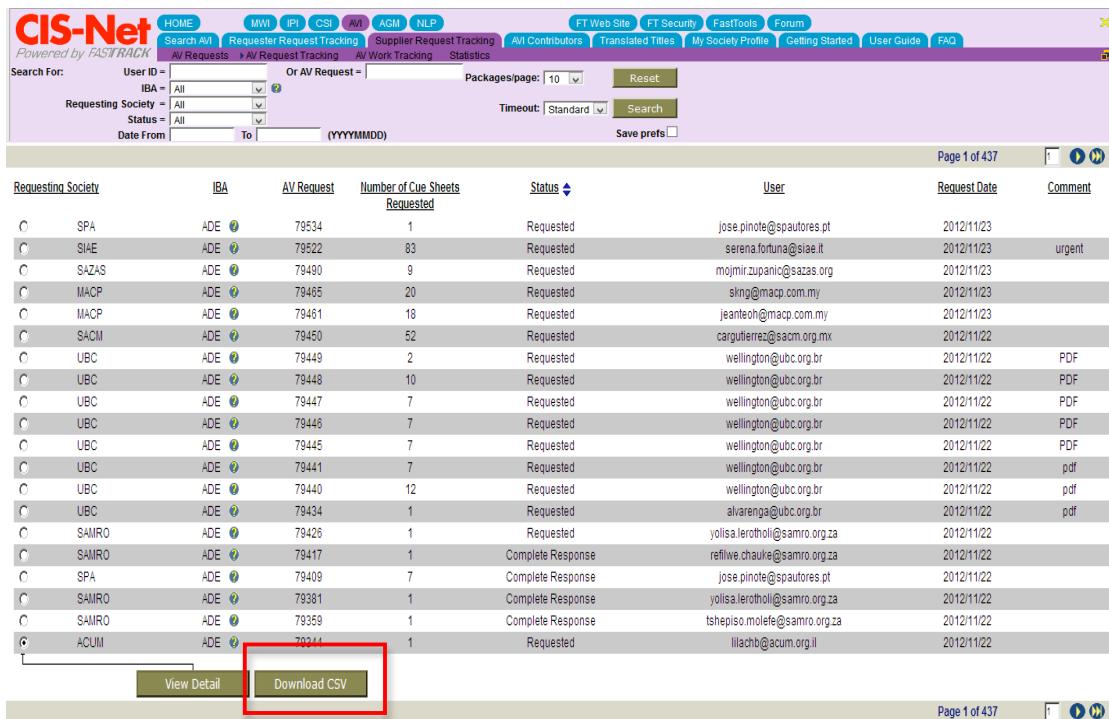

The following information is provided for the package selected:

- **Package Information Line:** The information listed at the top of the View Detail Page is the header information for the AV Request Package: Supplying Society, IBA, AV Request, Status, User, Request Date and Package Comment.
- **AV Request Content Line:** the AV Request Content Line displays information for each AV work included in the Package. Information includes Society AV Work Number, Film/Series Title, Episode Title, Response Reason Code, Response Date, Production Number and Requester AV Work Number.
- **'Back' button:** returns user to the Search Selection page.

5.2.4 Export Results

- ‘Download CSV’ button: allows the user to export the pages results to a ‘csv’ file.

Figure 36: Download CSV button

5.3 AV Work Tracking (Supplier Role)

The AV work tracking facility enables the Supplier society's users to query the CIS-Net AVI Database based on the AV work level information and independently from the response status code (Processed, Partial Response, Complete Response or Open).

Figure 37: AV Work Tracking Page

5.3.1 Search Criteria Frame

The search criteria options are activated each time the user selects the “AV work Tracking” sub menu.

5.3.1.1 ‘Search For’ option

The ‘Search For’ option provides a drop-down list specifying the types of fields (search arguments) that can be used to search for specific AV information. The options provided in the ‘Search For’ field(s) are as follows:

- **Film/Series Title:** Searches the selected databases for all AV film and series titles that match the entered search criteria. Select ‘Begin’, ‘Exact’ or ‘Contains’ from the drop-down list.
- **Episode Title:** Searches the selected databases for AV episodes that match the entered search criteria.
- **Society AV Number:** Searches for the Supplying Society’s AV Number for the cue sheet requested.
- **Production Number:** Searches the selected databases by the production company’s identifying AV production number.
- **Requesting Society:** The Requesting society name list will be populated based on the societies list stored in the security engine.

- **Response Reason Code:** The reason codes are described below:

CA	Available	Cue Sheet Available.
EM	Email	Sent via email.
NA	Not available	No production cue sheet is available.
NI	No interest	Society does not represent this AV work. It may be represented by Reference Society.
NM	No music	There is no music in this production.
PD	Public Domain	There is only public domain music in this production.
PO	Being sent	Sent via Post Office
RP	Replaced	Requested cue sheet was replaced with valid cue sheet for your territory.
WP	Work in Progress	Cue sheet is available but currently being amended or under internal review.

- **Date From To:** The user has the ability to search for information within a defined time range. The dates must be entered (YYYYMMDD).

5.3.1.2 ‘And For’ Option

The ‘And For’ provides supplemental search criteria options. When used in combination with the ‘Search For’ criteria options; the ‘And For’ search criteria provide a more focused and specific search. Availability and use of the ‘And For’ criteria options are dependent on the specific ‘Search For’ criteria option selected. The only ‘And For’ combination available in the AV Work Tracking Search is:

Search For:	Film/Series Title Episode Title Society AVN Production Number	
And For:	Production Number	This option is only available with Film/Series Title
And For:	Requester society Name	This is the list of all CISAC society names.
And For:	Response Reason Code	
And For:	Date Range	

5.3.1.3 Exact/Begins/Contains Drop-Down List

When Series, Film, Episode Title is the search criteria selected, ‘Exact’, ‘Begins’ or ‘Contains’ can be selected from the drop-down list.

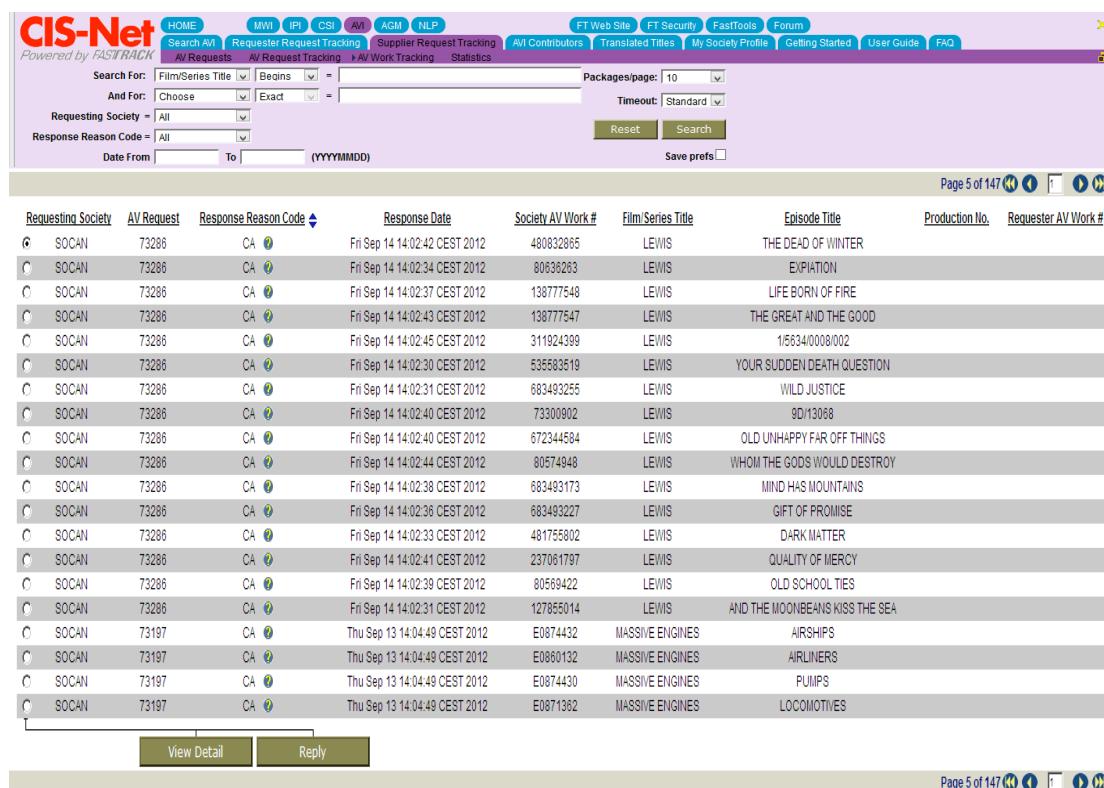

- **Exact:** Searches the selected databases for the AV Title(s) that exactly matches the entered search criteria.

- **Begins:** Default setting. Searches the selected databases for the AV Title(s), which match the order of the words in the entered search criteria. The ‘Begins’ search is based on a full word search and does not perform partial word searches.
- **Contains:** Searches the selected databases for the AV Title(s) that include the words in the entered search criteria in any order.

5.3.2 Selection Frame

The Selection frame will provide you with a list of all packages that matched the search criteria.

Figure 38: AV Work Tracking Selection Page

The screenshot shows the CIS-Net AV Work Tracking Selection Page. At the top, there is a navigation bar with links for HOME, MVN, IP, CSI, AVI, AGM, RLC, FT Web Site, FT Security, FastTools, Forum, and various user profile and help links. Below the navigation bar is a search form with fields for 'Search For' (Film/Series Title, Begins, exact match), 'And For' (Choose, exact match), 'Requesting Society' (All), 'Response Reason Code' (All), and date range ('Date From' and 'To'). There are also buttons for 'Reset', 'Search', and 'Save prefs'. The main area displays a table of search results with the following columns: Requesting Society, AV Request, Response Reason Code, Response Date, Society AV Work #, Film/Series Title, Episode Title, Production No., and Requester AV Work #. The table contains 20 rows of data, each representing a package. At the bottom of the page are 'View Detail' and 'Reply' buttons, and a footer indicating 'Page 5 of 147'.

SOCAN	73197	CA ?	Thu Sep 13 14:04:49 CEST 2012	E0871362	MASSIVE ENGINES	LOCOMOTIVES		

The information available for each package on the Selection frame includes Requesting Society, AV Request (Package ID tracking number), Response Reason Code, Response Date, Society AV Work Number, Film/Series Title, Episode Title, Production Number and Requester AV Work Number.

- **Description of the Response Reason Code:** Clicking on the icon (question mark) will enable the user to view the full description of the selected Response Reason code.
- **Sorting by ‘Response Reason Code’:** The user will be able to sort the results by the Response Reason Code. An icon showing two triangles facing

opposite directions next to the status column header label will be used to perform this sort.

In addition, the AV Work Tracking page provides the following functions for managing packages:

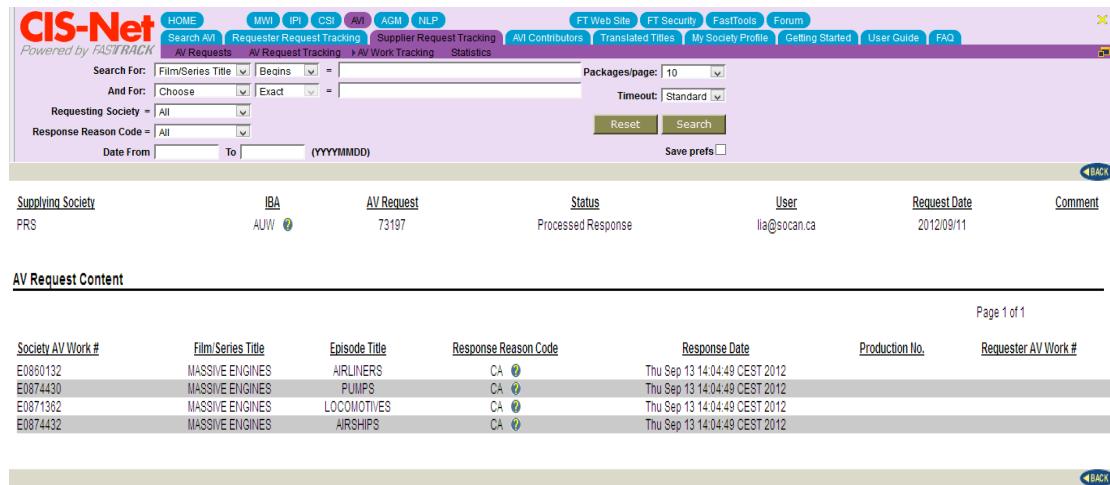

'Select' Button: Clicking the buttons to the left of each AV Request listed allow the user to select one or more of the AV Work to 'Reply' with a Response Reason Code.

'View Detail' Button: Clicking the View Detail button opens the View Detail page.

5.3.3 View Detail Page

Clicking the View Detail Button opens the View Detail Page.

Figure 39: View Detail Page

The screenshot shows the CIS-Net interface with the following details:

Search Criteria:

- Search For: Film/Series Title [Begins] = [AIRLINES]
- And For: Choose [Exact] = [A]
- Requesting Society: All
- Response Reason Code: All
- Date From: [] To: [] (YYYYMMDD) []
- Packages/page: 10
- Timeout: Standard
- Buttons: Reset, Search, Save prefs, BACK

Package Information Line:

Supplying Society	IBA	AV Request	Status	User	Request Date	Comment
PRS	AUW	73197	Processed Response	lia@socan.ca	2012/09/11	

AV Request Content:

E0860132	MASSIVE ENGINES	AIRLINERS	CA 🚧	Thu Sep 13 14:04:49 CEST 2012		
E0874430	MASSIVE ENGINES	PUMPS	CA 🚧	Thu Sep 13 14:04:49 CEST 2012		
E0871362	MASSIVE ENGINES	LOCOMOTIVES	CA 🚧	Thu Sep 13 14:04:49 CEST 2012		
E0874432	MASSIVE ENGINES	AIRSHIPS	CA 🚧	Thu Sep 13 14:04:49 CEST 2012		

Page 1 of 1

The following information is provided for the package selected:

- **Package Information Line:** the information listed at the top of the View Detail Page is the header information for the AV Request Package: Supplying Society, IBA, AV Request, Status, User, Request Date and Package Comment.
- **AV Request Content Line:** the AV Request Content Line displays information for each AV work included in the Package. Information includes Society AV Work Number, Film/Series Title, Episode Title, Response Reason Code, Response Date, Production Number and Requester AV Work Number.
- **'Back' button:** returns user to the Search Selection page.

5.4 Statistics (Supplier Role)

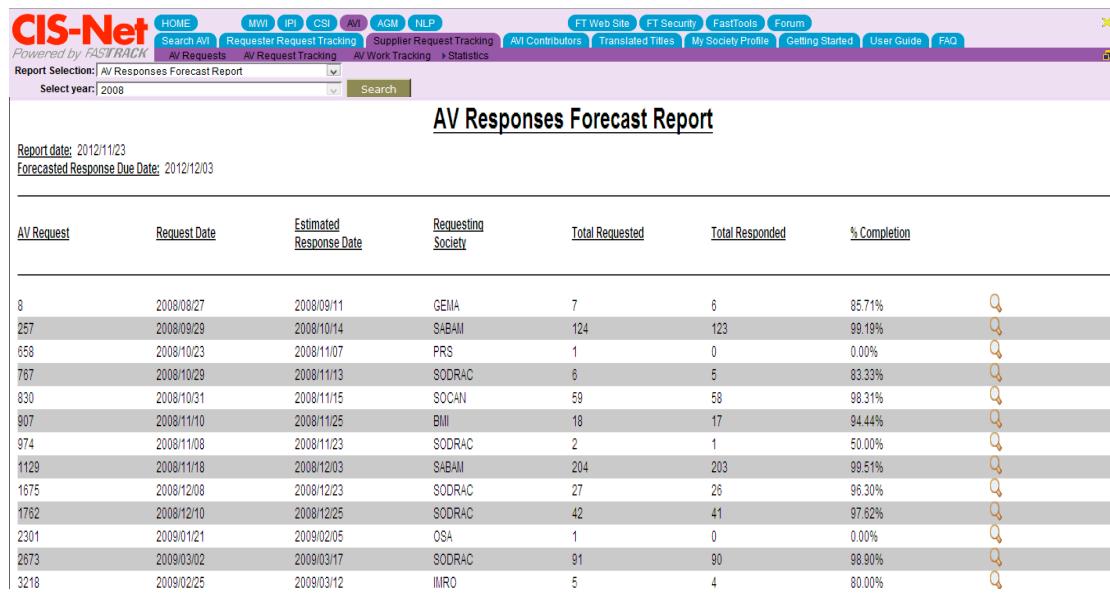

The Statistics Selection screen is activated each time the user selects the “Statistics” tab of the Supplier Request Tracking Facility menu. This feature enables the Supplier society to view, print and download electronic reports based on the AV Requests and Responses exchanges in the CIS-Net RTF database.

The Supplier society can select two different reports from the drop down box and initiate the report by clicking the ‘Search’ button. Each report is described in the next section.

5.4.1 AV Responses Forecast Report

The AV Response Forecast Report enables the Supplier society to check all past due requested responses and anticipate imminent request responses based on a Supplier society threshold.

Figure 40: AV Responses Forecast Report

AV Request	Request Date	Estimated Response Date	Requesting Society	Total Requested	Total Responded	% Completion	
8	2008/08/27	2008/09/11	GEMA	7	6	85.71%	
257	2008/09/29	2008/10/14	SABAM	124	123	99.19%	
658	2008/10/23	2008/11/07	PRS	1	0	0.00%	
767	2008/10/29	2008/11/13	SODRAC	6	5	83.33%	
830	2008/10/31	2008/11/15	SOCAN	59	58	98.31%	
907	2008/11/10	2008/11/25	BMI	18	17	94.44%	
974	2008/11/08	2008/11/23	SODRAC	2	1	50.00%	
1129	2008/11/18	2008/12/03	SABAM	204	203	99.51%	
1675	2008/12/08	2008/12/23	SODRAC	27	26	96.30%	
1762	2008/12/10	2008/12/25	SODRAC	42	41	97.62%	
2301	2009/01/21	2009/02/05	OSA	1	0	0.00%	
2873	2009/03/02	2009/03/17	SODRAC	91	90	98.90%	
3218	2009/02/25	2009/03/12	IMRO	5	4	80.00%	

The report lists all AV Requests that have at least one open item where the Estimated Response Date is past due. Each AV Request listed in this report will be sorted by Forecasted Response Date and by Requester society. The report will be composed of two sections: 1) A Header section and 2) A Detail section.

- **Header section:** includes Report Date and Forecasted Response Due Date.
- **Detail section** (one line for each selected AV Request): includes AV Request, Request Date, Estimated Response Date, Requesting Society, Total Requested, Total Responded and % (Percentage) of completion.

Additionally when clicking on the magnifying glass at the right side of the statistics page provides a list of the non-delivered cue sheets from a particular AV Request package.

The application will use the following calculations:

Estimated Response Date = AV Request Date + Number of Days to respond to Request (value stored in society profile)

Society Threshold = Unique number between 0 and 75. The unit is days. This value will be retrieved from the society profile.

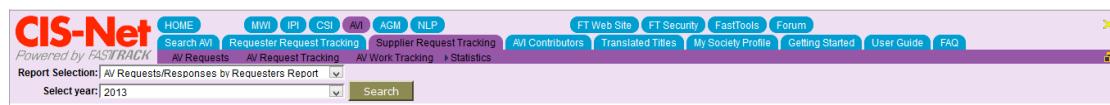

Forecasted Response Due Date = Report Date + Requester Society Threshold (Value stored in the society profile)

Open Request Forecast = (AV Request Response Status = Open or Partial Response) and (Estimated Response Date < Forecasted Response Due Date)

5.4.2 AV Requests/Responses by Requesters Report

The AV Requests/Responses by Requesters Report enables the Supplier society to gather AV Request/Response statistics by Requester society, Year and Month.

Figure 41: AV Requests/Response by Requesters Report

The screenshot shows the CIS-Net interface with the following navigation bar:

- HOME
- MW
- IP
- CSI
- AVI
- AGM
- NLP
- FT Web Site
- FT Security
- FastTools
- Forum
- Avi Contributors
- Translated titles
- My Society Profile
- Getting Started
- User Guide
- FAQ

Below the navigation bar, there are dropdown menus for "Report Selection" (set to "AV Requests/Responses by Requesters Report") and "Select year" (set to "2013"). A "Search" button is also present.

The main content area is titled "AV Requests/Responses by Requesters Report". It displays a table with the following columns:

Requesting Society	Request Year	Request Month	Total Number of Packages Submitted	Total Number of Cue Sheets Submitted	Total Number of Cue Sheets Received	% Completion
ACUM	2011	JAN	8	81	79	97.53%
ACUM	2011	FEB	3	12	5	41.67%
ACUM	2011	MAR	10	57	18	31.58%
ACUM	2011	APR	11	99	59	59.60%
ACUM	2011	MAY	5	14	12	85.71%
ACUM	2011	JUN	3	3	3	100.00%
ACUM	2011	JUL	5	8	6	75.00%
ACUM	2011	AUG	9	655	652	99.54%
ACUM	2011	SEP	4	14	14	100.00%
ACUM	2011	OCT	5	59	59	100.00%
ACUM	2011	NOV	3	8	8	100.00%
ACUM	2011	DEC	5	11	10	90.91%
AEPI	2011	OCT	1	1	1	100.00%
AKM	2011	JAN	1	1	0	0.00%
AKM	2011	FEB	1	1	0	0.00%
AKM	2011	MAR	3	4	2	50.00%
AKM	2011	APR	3	10	4	40.00%
AKM	2011	AUG	2	2	2	100.00%
AKM	2011	SEP	1	2	1	50.00%
AKM	2011	OCT	7	7	4	57.14%
AKM	2011	DEC	1	1	1	100.00%
APRA	2011	MAR	1	1	1	100.00%

The report will calculate and display cumulative information for the following performance key indicators: Total Number of Requests, Total Number of Items Requested, Total Number of Items Responded and the Percentage of Completion. The report will be composed of two sections: 1) A Header section and 2) A Detail section.

- **Header section:** includes Report Date.
- **Detail section** (one line for each selected AV Request): includes Requesting Society, Request Year, Request Month, Total Number of Packages Submitted, Total Number of Cue Sheets Submitted, Total Number of Cue Sheets Received, and % (Percentage) of completion.

5.4.3 Contributor Statistics

The following report lists the number of records supplied by contributing societies by Year and Month.

Figure 42: Contributor Statistics Report

5.4.4 AV Catalogue Population Statistics

The following report lists the total numbers of records by Type (Genre)

Figure 43: AV Catalogue Population Statistics Report

The screenshot shows the CIS-Net AVI 4.6 interface. At the top, there's a navigation bar with links like HOME, MW, IPI, CSI, AVI, AGM, NLP, FT Web Site, FT Security, FastTools, Forum, and others. Below the navigation bar, there's a search bar and a dropdown menu for 'Report Selection' set to 'AV Catalogue Population Statistics'. A date selector shows 'Select year: 2012' and a 'Search' button. The main content area displays two tables: 'AVIndex population by type' and 'AVIndex population by category'. Both tables show counts for various categories.

Two new tabs are available from CIS-Net AVI 4.6:

5.4.5 Top Requested Cue Sheets

Lists the most requested cue sheets.

5.4.6 Number of queries

Lists the numbers of online queries.

AV Request Received

Integration date: May 23 2008 16:45:27 PM

File Name submitted:

Package information

6 Email Notifications

6.1 Requester Email Notifications

Package ID: 447

6.2 Response Retrieval Notification

Requester society: BMI (021)

Requester: smasson@bmi.com

AV Supplier Customer Service email address: customer-040-c

demo@svr1.fasttrackdcn.net

This email notification is intended to acknowledge to the Requester societies that a Supplier society has received your AVI Request from the CIS-Net AVI. The email notification title is "Requester Society – Request Reception Acknowledgement."

IBA ADE
Comment:

Figure 44: AV Response Retrieval Notification

Required parameters are missing or incorrect.

The body of the email will list the following information:

1. Integration date
2. File Name submitted
3. Package information
4. Package ID
5. Requester society
6. Requester
7. AV Supplier Customer Service email address
8. IBA
9. Comment
10. Submitted via
11. Number of Cue Sheets requested
12. AVI Package Content
13. Supplier society
14. Society AV Work number
15. Film/Series Title
16. Episode Title
17. Production Nr
18. Comment

6.2.1 AV Response Retrieval Notification

This email notification is intended to acknowledge to the Requester societies that a Supplier society has responded to one or several pending AV Request and the re-

sponses are ready for retrieval by the Requester society. The email notification title will be "AV Response Retrieval Notification".

Figure 45: AV Response Retrieval Notification

Required parameters are missing or incorrect.

The number of attached files will vary depending on the number of AVI responses submitted. In general, the user will receive one PDF file, one AVR file and the report containing information pertaining to the response.

For example: The user will receive one PDF Cue Sheet report by requested Cue Sheet therefore if you have requested 20 Cue Sheets in the original request and the supplier responded to all, you will then receive 20 PDF files in a zip file.

Warning: in some cases you will not receive any PDF file attachment. In some cases the supplier may have responded in a manual mode (Paper cue sheet send via Post office for example). In such case no cue sheet information was submitted to CIS-net AVI therefore no Cue Sheet report was created. Check the ARN Response reason code in the report to be sure (ARN Code).

The body of the email will list the following information:

1. Integration date
2. File Name to retrieve
3. Package response
4. Package ID
5. Requester society
6. Requester
7. AV Supplier Customer Service email address
8. IBA

6.3 Supplier Email Notifications

The supplier is responsible for accessing the CIS-Net AVI interface to retrieve or print new AV Responses.

6.3.1 New Request Notification

This email notification is intended to notify the Supplier societies that when a new request is submitted by a Requesting society.

The society acronym is displayed in the subject of the email notification when receiving an email notification from a requesting society. The operator will be now able to sort and view their AV request notification based on the requesting society's name as follows:

Figure 46a: Email Inbox – Society name in Subject

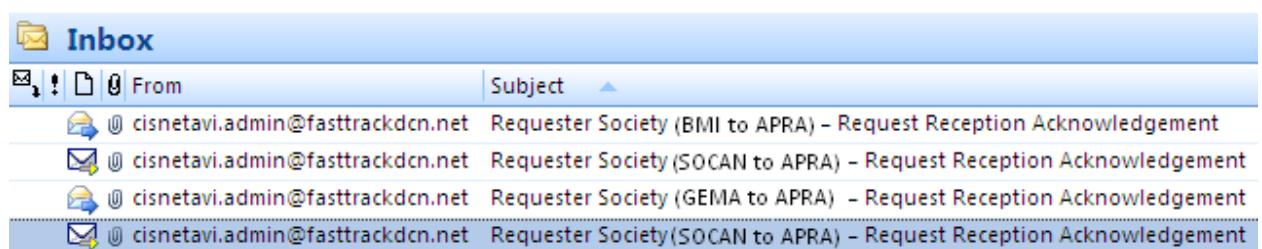

Figure 46: New Request Notification

Required parameters are missing or incorrect.

The number of attached files will vary depending on the number of AVI request submitted. In general the user will receive one PDF file, one AIR file and the report containing information pertaining to the request.

The body of the Report lists the following information:

1. Integration date:
2. File Name to retrieve / attached
3. Package information
4. Package ID
5. Requester society
6. Requester
7. IBA

19. AVI Package Content information
20. Supplier society
21. Society AV Work number
22. Film/Series Title
23. Episode Title
24. Production Nr
25. Comment
26. AVI Package Content information

6.3.2 AV Response Integration Notification

This email notification is intended to notify the Supplier societies that their responses to a pending AV Request have been submitted to the Requester society.

Figure 47: AV Response Integration Notification

Required parameters are missing or incorrect.

The email has only one attachment. The attachment contains information pertaining to the response files submitted to the requester.

The body of the attachment lists the following information:

1. Submission AVR started at
2. Requester society
3. Submitting file name
4. Item(s) written
5. Writing summary:
6. Total number of item to write
7. Total number of item written
8. Total number of item not written
9. Integration end at

6.3.3 Pending Request Reminder Email Notification

This email notification is intended to remind both the Supplier and Requester societies when an AV Request is still pending after six weeks. This email notification incorporates the CIS-Net AVI Response Business Rule in the Request Tracking Process.

AVI Business Rule: Supplying societies will endeavor to respond within eight weeks or as sufficient to meet the deadline stated by the requesting society. If unable to complete in that time they should notify the Requester why and when it will be possible to do so. This should be done at six weeks.

A .pdf file will be attached to the email notification with the following pending AV Request Details: Society AV Work Number, Film/Series Title, Episode Title, and Production Number.

Received Request details

CIS-Net AVI REQUEST INFORMATION

Requesting Society: SABAM	Request Date: Jan 21, 2005
Source Society: BMI	Pkg ID: 75
Comments: null	Number of Cue Sheets Requested : 1

Request Items

Package Item Id	Soc. AV Number	Film/Series Title Episode Title or Episode #	Prod Number
1	52060010	HOMICIDE LIFE ON THE STREET SEE NO EVIL	201

The body of the email will list the following information:

1. Requestor Society Name
2. Requestor User ID or email address
3. Supplier Society Name
4. The Request Date
5. The Package ID
6. Number of Cue Sheets requested.

7 CIS-AVI DVD ROM Application

7.1 DVD ROM Application Requests

The DVD ROM Application is fully integrated with the CIS-Net AVI application. AV requests from the user using the DVD ROM Application will be sent and processed by the CIS-Net AVI Application. The email address of the requestor will also be sent to the CIS-Net AVI and will be used to notify the user upon successful integration in the CIS-Net AVI RTF Database.

Once successfully integrated in the AVI RTF, the requests are forwarded to the intended Supplier societies and the tracking functionality of the request is as outlined in the CIS-Net AVI User manual.

Please note that as of January 2013 the DVD-ROM application has not been produced. The last copy of the application was issued in December 2012.

Appendix A: Audio-Visual Title Types

Code	Value	Definition
AT	Alternate Title	An alternative to an original title.
ET	Extra Search Title	An alternative title where special characters, puns, or slang have been replaced by standardized elements to aid database searching.
TE	First Line of Text	The beginning of a text.
FT	Formal Title	A standardized title in which the elements are arranged in a pre-determined order created for classical works.
IT	Incorrect Title	A spurious or unacceptable title sometimes mistakenly used for identification.
OT	Original Title	A title given to the work by its creator(s) shown in its original language.
TT	Original Title Translated	An original title translated into a different language.
PT	Part Title	A section of a work which is not recognized as an excerpt in its own right and does not have its own ISWC
RT	Restricted Title	A title from which all initial articles and punctuation have been removed.

Appendix B: CIS-Net AVI FTP Request Form

This form is necessary to requests a FTP account to supply information to CIS-Net AVI data exchange automated process.

Please fill in the form below and send it back to the CISAC Secretariat:

Via e-mail to CISNetAVI.Admin@FastTrackDCN.net

Or by fax to +33 1 56 79 14 51

FTP Access Request:

Society name:	
Society code:	
Request date:	

	Requester's details
First name	
Last name	
E-mail	
Phone number	
Fax number	
Job title	

Once your CIS-Net AVI FTP account is created, you will receive an email confirmation with your credentials.

Please note following details regarding the FTP site:

- URL of the FTP site : <ftp://ftp.fasttrackdcn.net>
- Your FTP account will follow the pattern : **AVI_xyz – where “xyz” stands for your society code**

Once accessing the FTP site you will be able to navigate through the following FTP folder structure.

Suppliers' Data Exchange and folder structure:

- If you are a supplier and you want to retrieve AV Request files from requesting societies via CIS-Net AVI FTP you will need to access requests\outgoing folders. You are responsible to delete the files once properly transferred to your FTP site.
- If you are a supplier and you want to submit your AV response files to the requesting societies via CIS-Net AVI FTP you will need to access responses\incoming folders.

Once CIS-Net AVI AV Request / AV Response integration tool run, the AVR file is submitted to the requesting society and the file is archived in the responses\incoming\processed folder.

- If an error occurs during the CIS-Net AVI AV Request / AV Response integration tool execution a particular file, the file causing the problem is moved to responses\incoming\rejected.

Requesters' Data Exchange and folder structure:

- If you are a requesting society and you want to retrieve the AV Responses via CIS-Net AVI FTP, you will need to access responses\outgoing folders. You are responsible to delete the files once properly transferred to your FTP site.
- If you are a requesting society and you want to submit AV request to supplying societies via CIS-Net AVI FTP, you will need to access requests\incoming folders.

Once CIS-Net AVI AV Request / AV Response integration tool run, the AVR file is submitted to the requesting society and the file is archived in the requests\incoming\processed folder.

- If an error occurs during the CIS-Net AVI AV Request / AV Response integration tool execution a particular file, the file causing the problem is moved to requests\incoming\rejected.

Appendix C: Frequently Asked Questions

Q – Society Threshold: I was working on the Society Profile AVI form, but I'm not sure I understand the Society Threshold field. It's not the average number of days for a response, since there's already a field for that.

A - The society threshold allows manager to forecast future incoming AV Response. Based on the business rule, supplying societies have 2 months maximum from the date the request was received to supply requested cue sheets. When creating the report we need to calculate the Estimated Response Date and compare this date to the report date to identify if the AV response is delayed. Such calculation takes into account only the AV Requests with a cut off date limited to the present (Date of the Report). If we want to forecast future delivery let's say for example which AV Requests are due in two weeks from today we need put in a new variable into our formula to simulate Date Of Report + How long in the Future I want to be able to forecast. This new variable is the society threshold.

For example: today is 02/07/2008 and I want to forecast incoming AV responses due in 2 weeks. I will set my threshold to 15 days. So my new report date that will be compared to the AV Response Estimated date will be:

02/07/2008 + 15 days = 02/22/2008.

The report will select any open AV request where AV Request Date + Number of days to respond <= 02/22/2008.

Any request due between 02/07/2008 and 02/22/2008 will be included.

Q-Amendment Date: Is only the most recent amendment date shown under Submission?

A – The response to your question is Yes. There will be a new field added to the AVIndex for the purpose of the extract. This will not be viewable within the AVIndex.

Q-Display inconsistencies between searches: When searching by Society AVN search or ISAN or Production number - the screen brings the data back already expanded, this is different from the other searches. Why is that?

A – In this particular example search by AV Work Number, this is actually a normal behavior for the following reasons:

- There is a need to display the matching AV Work Number which is not always displayed on the search result page. So it was necessary to expand the hidden information. The same logic applied for search by ISAN number and production number.

Q-ARN and AVR Files: aren't ARN files supposed to go along with the AVR ones?

A – We believe there is a misunderstanding regarding the relationship between ARN and AVR, so we would like to give you the following explanation hoping that it will help. ARN and AVR are both records and not files. The sole purpose of the ARN record is to describe the response status of one requested Cue Sheet and provide the programmers a mean to know if they should expect the corresponding AVR records in the SAME file. You should have one

ARN record per AIR record previously submitted to the supplying society. The supplier MUST provide the AVR records when the response reason code is set to CA in the ARN record. If the supplier does not have the corresponding cue sheet (to create an AVR record), the supplier MUST provide the ARN record with the response reason code set to NI (No Interest) or NA (Not Applicable). Therefore any ARN records with the response reason code NOT set to CA will not be followed by an AVR record.

The response reason code is the following field in the ARN record.

Reason	286	2	L	M	Indicates the reason that an electronic cue sheet can or can not be sent at this time.
---------------	-----	---	---	---	--

Q - If we did send an AVR file to the CIS-Net AVI when there wasn't a request, what would happen? I think that it is likely that this will happen in the transition period -- due to operator error. Will we receive an error message so we know to send the file directly to the society? If yes, will these error messages be included in the AVR specification or some other document?

A - The file will be rejected by the AV Request/AV Response integration job since the AVR response will not have the corresponding CIS-Net RTF Package ID and line item ID. Your cue sheet response administrator will receive an email notification that look like this:

"Integration AVR started at: May 12 2008 23:02:02 PM Supplier society: XYZ

Integrating file: AVR-test file.txt

- Parse error at line: 3, Cause by: ARN Line malformed
- Parse error at line: 415, Cause by: ARN Line malformed
- Parse error at line: 578, Cause by: ARN Line malformed

Parsing summary:

Total number of ARN line in this file:	3
Total number of ARN line parsed:	0
Total number of ARN line rejected:	3

Integration summary:

Total number of items to integrate:	0
Total number of items integrated:	0
Total number of items rejected:	0

Integration end at: May 12 2008 23:02:02 PM

=====

=

====

Total number of files:	1
Total number of items to integrate:	0
Total number integrated items:	0
Total number of rejected items:	0

"

Q - Are there other conditions where an AVR file might be rejected by the CIS-Net AVI?

A - There are two processes that take place:

1- AVR validation: CIS-Net RTF Package ID, CIS-Net RTF item id, Response reason code must be populated. Failure to populate the appropriate CIS-Net RTF package IDs fields will reject the file.

2- AVR to PDF conversion: The PDF conversion is not as flexible as the AVR validation. For example you must respect the length of each record and mandatory fields must be populated.

Q - Will the CIS-Net AVI send an ACK file to the supplier society? If yes, is part of the test cycle the sending of AVR files and receiving ACK files with error messages?

A - No the ACK file mechanism wasn't implemented in CIS-Net AVI.

The acknowledgment will be done via email notifications and if necessary by consulting the user interface.

Q - **View Profile:** How can we view our society profile?

A - There is no interface available to the user to check the society profile. You will need to request the information to the CIS-Net AVI administrators by sending an email to the following address: cisnetavi.admin@fasttrackdcn.net.

Q- Change Profile: For the time being we would like to use e-mail and PDF, but as our IT-technicians are in the process of analyzing CIS-NET AVI and AVR, in the future we may change to AVI/AVR and FTP. I hope we are allowed to change our society profile whenever we are ready to use AIR/AVR?

A - You are allowed to change your society profile preference at any point of time. You will need to submit your request to the CIS-Net AVI administrators by sending an email to the following address: cisnetavi.admin@fasttrackdcn.net.
